The book is divided into four sections: the first embraces items that examine asset valuation procedures in general use during the nineteenth century. The second focuses on the particular practices that became popular among public utility companies. The third comprises studies on influences, particularly legal ones on the treatment of fixed assets in company accounts. The final section examines the likely economic effect of using particular valuation procedures and is another area where available material is scarce. Of the twenty-seven items included, seven were written during the nineteenth century and the remainder during the twentieth. Much has been written about the economic and political problems of countries that are in the process of changing from centrally planned systems to market systems. Most studies have focused on the economic, legal, political and sociological problems these economies have had to face during the transition period. However, not much has been written about the dramatic changes that have to be made to the accounting and financial system of a transition economy. This book was written to help fill that gap. This book is the second in a series to examine accounting and financial system reform in transition economies. The first book used Russia as a case study.
