Using Physical Science Gadgets & Gizmos, Grades 3-5 Jun 22 2023 What student-- or teacher-- can resist the chance to experiment with Velocity Radar Guns, Running Parachutes, Super Solar Racer Cars, and more? The 30 experiments in Using Physical Science Gadgets and Gizmos, Grades 3- 5, let your elementary school students explore a variety of phenomena involved with speed, friction and air resistance, gravity, air pressure, electricity, electric circuits, magnetism, and energy. The authors say there are three good reasons to buy this book: 1. To improve your students' thinking skills and problem-solving abilities. 2. To get easy-to-perform experiments that engage students in the topic. 3. To make your physics lessons waaaaay more cool. The phenomenon-based learning (PBL) approach used by the authors-- two Finnish teachers and a U.S. professor-- is as educational as the experiments are attention-grabbing. Instead of putting the theory before the application, PBL encourages students to first experience how the gadgets work and then grow curious enough to find out why. Working in groups, students engage in the activities not as a task to be completed but as exploration and discovery using curiosity-piquing devices and doohickeys. The idea is to motivate young scientists to go beyond simply memorizing science facts. Using Physical Science Gadgets and Gizmos can help them learn broader concepts, useful thinking skills, and science and engineering practices (as defined by the Next Generation Science Standards). *Creating Project-Based STEM Environments* Apr 20 2023 This book models project-based environments that are intentionally designed around the United States Common Core State Standards (CCSS, 2010) for Mathematics, the Next Generation Science Standards (NGSS Lead States, 2013) for Science, and the National Educational Technology Standards (ISTE, 2008). The primary purpose of this book is to reveal how middle school STEM classrooms can be purposefully designed for 21st Century learners and provide evidence regarding how situated learning experiences will result in more advanced learning. This Project-Based Instruction (PBI) resource illustrates how to design and implement interdisciplinary project-based units based on the REAL (Realistic Explorations in Astronomical Learning – Unit 1) and CREATES (Chemical Reactions Engineered to Address Thermal Energy Situations – Unit 2). The content of the book details these two PBI units with authentic student work, explanations and research behind each lesson (including misconceptions students might hold regarding STEM content), pre/post research results of unit implementation with over 40 teachers and thousands of students. In addition to these two units, there are chapters describing how to design one's own research-based PBI units incorporating teacher commentaries regarding strategies, obstacles overcome, and successes as they designed and implemented their PBI units for the first time after learning how to create PBI STEM Environments the “REAL” way.

**Hard-to-Teach Science Concepts** Nov 03 2021 Authors Susan Koba and Carol Mitchell introduce teachers of grades 3- 5 to their conceptual framework for successful instruction of hard-to-teach science concepts. Their methodology comprises four steps: (1) engage students about their preconceptions and address their thinking; (2) target lessons to be learned; (3) determine appropriate strategies; and (4) use Standards-based teaching that builds on student understandings. The authors not only explain how to use their framework but also provide a variety of tools and examples of its application on four hard-to-teach foundational concepts: the flow of energy and matter in ecosystems, force and motion, matter and its transformation, and Earth's shape. Both preservice and inservice elementary school teachers will find this approach appealing, and the authors' engaging writing style and user-friendly tables help educators adapt the method with ease.

**Technology in the Secondary Science Classroom** Feb 29 2024 If you're waiting to be convinced that computers offer more than pricey bells and whistles in the classroom, this is the book that will open your mind to technology's potential. But even if you're an early (and avid) adopter, you'll discover intriguing new concepts for technology-based teaching strategies that help students really learn science concepts. The featured technologies range from the easy to master (such as digital cameras) to the more complex (such as Probeware and geographic information systems). **Revolutionizing K-12 Blended Learning through the iFlex Classroom Model** Oct 15 2022 Blended learning has gained significant attention recently by educational leaders, practitioners, and researchers. iFlex, a variation of blended learning, is based on the premise that certain non-interactive teaching activities, such as lecturing, can take place by students without teachers' direct involvement. Classroom time can then be used for educational activities that fully exploit teacher-student and student-student interactions, allowing for meaningful personalized feedback and scaffolding on demand. Revolutionizing K-12 Blended Learning through the iFlex Classroom Model presents a well-rounded discussion on the iFlex model, highlighting methods for K-12 course design, delivery, and evaluation in addition to teacher performance assessment in a blended iFlex environment. Emphasizing new methods for improving the classroom and learning experience in addition to preparing students for higher education and careers, this publication is an essential reference source for pre-service and in-service teachers, researchers, administrators, and educational technology developers.

**Teaching and Learning Online** Sep 13 2022 Science is unique among the disciplines since it is inherently hands-on. However, the hands-on nature of science instruction also makes it uniquely challenging when teaching in virtual environments. How do we, as science teachers, deliver high-quality experiences to secondary students in an online environment that leads to age/grade-level appropriate science content knowledge and literacy, but also collaborative experiences in the inquiry process and the nature of science? The expansion of online environments for education poses logistical and pedagogical challenges for early childhood and elementary science teachers and early learners. Despite digital media becoming more available and ubiquitous and increases in online spaces for teaching and learning (Killham et al., 2014; Wong et al., 2018), PreK-12 teachers consistently report feeling underprepared or overwhelmed by online learning environments (Molnar et al., 2021; Seaman et al., 2018). This is coupled with persistent challenges related to elementary teachers' lack of confidence and low science teaching self-efficacy (Brigido, Borrachero, Bermejo, & Mellado, 2013; Gunning & Mensah, 2011). Teaching and Learning Online: Science for Secondary Grade Levels comprises three distinct sections: Frameworks, Teacher's Journeys, and Lesson Plans. Each section explores the current trends and the unique challenges facing secondary teachers and students when teaching and learning science in online environments. All three sections include alignment with Next Generation Science Standards, tips and advice from the authors, online resources, and discussion questions to foster individual reflection as well as small group/classwide discussion. Teacher's Journeys and Lesson Plan sections use the 5E model (Bybee et al., 2006; Duran & Duran, 2004). Ideal for undergraduate teacher candidates, graduate students, teacher educators, classroom teachers, parents, and administrators, this book addresses why and how teachers use online environments to teach science content and work with elementary students through a research-based foundation.

**Handbook of Research on the Global Empowerment of Educators and Student Learning Through Action Research** May 10 2022 The year 2020 brought an unprecedented worldwide health crisis through the COVID-19 pandemic that has been affecting all sectors, including education. There were questions surrounding the effectiveness of online trainings for teachers, online teaching practices, the motivation and engagement of students, and the quality of learning and education in these times. Action research emerged to address these concerns, being a systematic process of inquiry using reflection within a cyclical model of planning, acting, implementing, evaluating, and continuous reflection. This method of research is employed with the expertise and passion from educators to better enhance online practices and education while using authentic learning and experiences. Using collaboration, social advocacy, and action research, there is the opportunity to advance teaching for students, families, and communities without a physical context involved. The Handbook of Research on the Global Empowerment of Educators and Student Learning Through Action Research explores successful teaching and learning skills through the method of action research and intersects it with online learning in order to uncover best teaching practices in online platforms. This book showcases educational professionals' action research for solutions in advancing teaching and learning, the practical benefits of action research, recommendations for improving online teaching and learning, and a focus on professional growth as well as social justice advocacy. It highlights important topics including student learning, teacher collaboration, authentic learning, advocacy, and action research in both K-12 and higher education settings. This book is ideal for inservice and preservice teachers, administrators, teacher educators, practitioners, researchers, academicians, and students interested in how action research is improving and advancing knowledge on the best teaching practices for online education.

*Advancing the STEM Agenda* Dec 17 2022 In July 2011, the ASQ Education Division held its first Advancing the STEM (Science, Technology, Engineering, and Mathematics) Agenda in Education, the Workplace, and Society Conference at the University of Wisconsin–Stout. This publication is a selection of papers and workshops from this groundbreaking conference. The ideas presented here will help other educators and policy makers to develop their own innovative high-impact ideas for inspiring student interest in STEM careers, improving the delivery of STEM education at their schools and colleges, and helping STEM college graduates transition to the workplace. The chapters in this book reflect research and best practices, integrating the ideas of continuous improvement in combination with a can-do attitude, to provide a valuable resource that will lead others to consider similar innovative and collaborative educational structures that will drive more interest in STEM majors in college, and provide for our next generation of scientists, technicians, and engineers. "Prior to reviewing Advancing the STEM Agenda I had a list in my mind of topics that I hoped would be addressed. I'm very pleased with how many are covered—and covered well. This project succeeds at the challenge of providing not only beneficial breadth but also important depth. Because our public-private partnership has been committed explicitly to continuous improvement for more than a decade, I couldn't help but notice (as the editors also point out in their conclusion) the extent to which continuous improvement is a 'common thread' throughout the book. That speaks to the book's practical utility in many settings, and on a long-term basis. No less valuable is the discussion of student motivation by many of the authors, which STEM teachers in our area have identified as a major issue of interest to them in recent surveys." Richard Bogovich Executive Director Rochester Area Math Science Partnership, Minnesota. "Veenstra, Padró, and Furst-Bowe provide a huge contribution to the field of STEM education. We all know the statistics and of the huge need in the area of STEM students and education, but what has been missing are application and success stories backed by research and modeling. The editors have successfully contributed to our need by focusing on collaborative models, building the K-12 pipeline, showing what works at the collegiate level, connecting across gender issues, and illustrating workforce and innovative ideas." John J. Jasinski President Northwest Missouri State University "Advancing the STEM Agenda provides a broad set of current perspectives that will contribute in many ways to advancing the understanding and enhancement of education in science, education, and engineering. This work is packed with insights and perspectives from experienced educators and bridges the transition from education to workplace." John Dew Senior Vice Chancellor Troy University
