Languages and Compilers for Parallel Computing Feb 02 2023 In 2008 the Workshop on Languages and Compilers for Parallel Computing left the USA to celebrate its 21st anniversary in Edmonton, Alberta, Canada. Following its long-established tradition, the workshop focused on topics at the frontier of research and development in languages, optimizing compilers, applications, and programming models for high-performance computing. While LCPC continues to focus on parallel computing, the 2008 edition included the presentation of papers on program analysis that are precursors of high performance in parallel environments. LCPC 2008 received 35 paper submissions. Each paper received at least three independent reviews, and then the papers and the referee comments were discussed during a Program Committee meeting. The PC decided to accept 18 papers as regular papers and 6 papers as short papers. The short papers appear at the end of this volume. The LCPC 2008 program was fortunate to include two keynote talks. Keshav Pingali's talk titled "Amorphous Data Parallelism in Irregular Programs" suggested that irregular programs have data parallelism in the iterative processing of worklists. Pingali described the Galois system developed at The University of Texas at Austin to exploit this kind of amorphous data parallelism. The second keynote talk, "Generic Parallel Algorithms in Threading Building Blocks (TBB)," presented by Arch Robison from Intel Corporation addressed very practical aspects of using TBB, a production C++ library, for generic parallel programming and contrasted TBB with the Standard Template Library (STL).

More roof crash-worthiness ratings along with an expanded cross-border shopping guide. A revised summary of safety- and performance-related defects that are likely to affect rated models. More helpful websites listed in the appendix as well as an updated list of the best and worst "beaters" on the market.
