

Genetics: The Science of Heredity QUIZ STUDY GUIDE

VOCABULARY:

1. A **GENE** is a "factor" that controls a trait.
2. An **ALLELE** is a different form of a gene.
3. A **HYBRID OR HETEROZYGOUS** organism has two different alleles for a trait.
4. A **DOMINANT** allele is one whose trait always shows up in the organism; "stronger"
5. A **RECESSIVE** allele is one that is hidden or masked; "weaker"
6. **GENETICS** is the study of heredity.
7. **HEREDITY** is the passing of genetic traits from parent to offspring.
8. A chart that describes all the ways alleles can combine in a genetic cross is called a(n) **PUNNETT SQUARE**.
9. An organism's **PHENOTYPE** refers to its **physical appearance** or visible traits.
10. An organism's **GENOTYPE** refers to its **genetic make-up** or the alleles it has.
11. What is an organism called for having two identical alleles for a trait? **HOMOZYGOUS (hh OR HH)**
12. What is an organism called for having two different alleles for a trait? **HETEROZYGOUS (Hh)**

PUNNETT SQUARE PRACTICE:

Use with #13-14: Let's say that in cats, the gene for the length of the tail has two alleles. The dominant allele (T) codes for long tails and the recessive allele (t) codes for short tails.

13. What is the probability of producing offspring that have short tails from a cross of two long tailed cats, one that is *homozygous dominant (TT)* and one that is *heterozygous (Tt)*? Show your work on the Punnett square.

100% LONG TAILS

0% SHORT TAILS

14. If one parent cat is *heterozygous long-tailed (Tt)* and the other is *short tailed (tt)*, what is the probability that the offspring will have short tails?

50% LONG TAILS

50% SHORT TAILS

15. In unicorns, two horns (H) is dominant and one horn (h) is recessive. Complete the Punnett square to show the cross of *two hybrid (Hh)* unicorns. **Summarize** the genotypes and phenotypes of the possible offspring.

POSSIBLE GENOTYPES: HH, Hh, AND hh

POSSIBLE PHENOTYPES: TWO HORNS AND ONE HORN

SUMMARY: Based on the information from the Punnett Square we can predict that 75% of the offspring would have two horns because they all have a dominant allele. We can also predict that 25% would have one horn because they have two recessive alleles.

Evolution in Four Dimensions, revised edition Eva Jablonka, Marion J. Lamb, 2014-03-21 A pioneering proposal for a pluralistic extension of evolutionary theory now updated to

reflect the most recent research This new edition of the widely read *Evolution in Four Dimensions* has been revised to reflect the state of new discoveries in biology since the book was first published in 2005 offering corrections an updated bibliography and a substantial new chapter Eva Jablonka and Marion Lamb s pioneering argument proposes that there is more to heredity than genes They describe four dimensions in heredity four inheritance systems that play a role in evolution genetic epigenetic or non DNA cellular transmission of traits behavioral and symbolic transmission through language and other forms of symbolic communication These systems they argue can all provide variations on which natural selection can act Jablonka and Lamb present a richer more complex view of evolution than that offered by the gene based Modern Synthesis arguing that induced and acquired changes also play a role Their lucid and accessible text is accompanied by artist physician Anna Zeligowski s lively drawings which humorously and effectively illustrate the authors points Each chapter ends with a dialogue in which the authors refine their arguments against the vigorous skepticism of the fictional I M for Ipcha Mistabra Aramaic for the opposite conjecture The extensive new chapter presented engagingly as a dialogue with I M updates the information on each of the four dimensions with special attention to the epigenetic where there has been an explosion of new research Praise for the first edition With courage and verve and in a style accessible to general readers Jablonka and Lamb lay out some of the exciting new pathways of Darwinian evolution that have been uncovered by contemporary research Evelyn Fox Keller MIT author of *Making Sense of Life Explaining Biological Development with Models Metaphors and Machines* In their beautifully written and impressively argued new book Jablonka and Lamb show that the evidence from more than fifty years of molecular behavioral and linguistic studies forces us to reevaluate our inherited understanding of evolution Oren Harman *The New Republic* It is not only an enjoyable read replete with ideas and facts of interest but it does the most valuable thing a book can do it makes you think and reexamine your premises and long held conclusions Adam Wilkins *BioEssays*
