The acclaimed discoverer of LSD’s personal experiences and thoughts on chemistry, the natural sciences, mind-altering drugs, the soul, and the search for happiness • Shares a different side of the father of LSD, one known only to his friends and close colleagues • Explains Hofmann’s different methods of pharmaceutical research based on traditional plant medicine • Includes the poetry of this mystical prophet of psychedelic science Best known as the first person to synthesize, ingest, and discover the psychedelic effects of LSD, Albert Hofmann was more than just a chemist. A pioneer in the field of visionary plant research, he was one of the first people to suggest the use of entheogens for psychological healing and spiritual growth. His insights into the consciousness-expanding effects of psychedelics as well as human nature, the psyche, and the nature of reality earned him a reputation as a mystical scientist and visionary philosopher. This book--Hofmann’s last work before his death in 2008 at the age of 102--offers the acclaimed scientist’s personal experiences and thoughts on chemistry, the natural sciences, mind-altering drugs, the soul, and the search for happiness and meaning in life. Hofmann explains different methods of pharmaceutical research based on traditional plant medicine and discusses psilocybin, the active compound in psychedelic mushrooms that he discovered. He examines the psychological role of psychoactives, their therapeutic potential, and their use in easing the life-to-death transition. Sharing a different side of the father of LSD, one known only to his friends and close colleagues, this book also includes the poetry of this mystical prophet of psychedelic science. It provides chemical structures, analytical methods, clinical features, and treatments of these drugs of abuse, serving as a highly useful, in-depth supplement to a general medical toxicology book. The style allows for the easy application of the contents to searchable databases and other electronic products, making this an essential resource for practitioners in medical toxicology, industrial hygiene, occupational medicine, pharmaceuticals, environmental organizations, pathology, and related fields. The most powerful plants--those known to transport the human mind into other dimensions of consciousness--have traditionally been regarded as sacred. In The Encyclopedia of Psychoactive Plants Christian Rätsch details the botany, history, distribution, cultivation, and preparation and dosage of more than 400 psychoactive plants. He discusses their ritual and medicinal usage, cultural artifacts made from these plants, and works of art that either represent or have been inspired by them. The author begins with 168 of the most well-known psychoactives--such as cannabis, datura, and papaver--then presents 133 lesser known substances as well as additional plants known as “legal highs,” plants known only from mythological contexts and literature, and plant products that include substances such as ayahuasca, incense, and soma. The text is lavishly illustrated with 797 color photographs--many of which are from the author’s extensive fieldwork around the world--showing the people, ceremonies, and art related to the ritual use of the world’s sacred psychoactives. A study of the physiological and psychological reasons the body needs sleep, and of how this crucial function can be manipulated by certain drugs, therapies, changes in eating, or behavioral patterns. The most comprehensive guide to the botany, pharmacology, cultural, ritual, and personal use of erotically stimulating substances from antiquity to the present day • Details the use, preparation, and dosage of more than 400 plant, animal, mineral, and synthetic substances, both common and exotic, as well as their botany, science, and legal status • Explores the historical and present use of aphrodisiacs and their role in sexual practices, culture, and art • Richly illustrated throughout with more than 800 color photographs The culmination of more than 30 years of cultural, anthropological, and scientific research, this encyclopedia examines the botany, pharmacology, history, preparation, dosage, and practical use of more than 400 erotically stimulating substances from antiquity to the present day. From plants and animals that enhance fertility and virility, like celery, snails, or oysters, to substances that induce arousal, like ephedra, opium, or cannabis, the encyclopedia is richly illustrated with more than 800 color photographs--many of which are from the authors’ extensive fieldwork around the world. Exploring individual, medicinal, and ritual use through historic and contemporary artwork, personal accounts, and literature as well as ayurvedic, tantric, shamanic, and European folklore practices and recent pharmacological research, the authors look at the revolving cycle of acceptance and condemnation of aphrodisiacs, the qualities that incur the label of “aphrodisiac,” the role of mind and setting, and the different ways aphrodisiacs stimulate desire--either physically, through the senses and vital organs, or mentally, through heightened awareness and altered consciousness. This comprehensive guide reveals these “remedies of the love goddess” as holy remedies whose proper use can help reestablish harmony with oneself, one’s partner, and the universe. Examines alcohol abuse and alcoholism, a disease many feel cannot be cured, only arrested. Psychedelic Shamanism presents the spiritual and shamanic properties of psychotropic plants and discusses how they can be used to understand the structure of human consciousness. Author Jim DeKorne offers authoritative information about the cultivation, processing, and correct dosages for various psychotropic plant substances including the belladonna alkaloids, d-lysergic acid amide, botanical analogues of LSD, mescaline, ayahuasca, DMT, and psilocybin. Opening with vivid descriptions of the author’s personal experiences with psychedelic drugs, the book describes the parallels that exist among shamanic states of consciousness, the use of psychedelic catalysts, and the hidden structure of the human psyche. DeKorne suggests that psychedelic drugs allow us to examine the shamanic dimensions of reality. This worldview, he says, is ubiquitous across space, time, and culture, with individuals separated by race, distance, and culture routinely describing the same core reality that provides powerful evidence of the dimensional nature of consciousness itself. The book guides the reader through the imaginal realm underlying our awareness, a world in which spiritual entities exist to reconnect us with ourselves, humanity, and our planet. Accurate drawings of plants, including peyote, Salvia divinorum, and San Pedro, enhance the book’s usefulness. Traces the history of the use of hallucinogenic drugs and discusses the psychological and physical effects of LSD, marijuana, mescaline, and other drugs. For all those who might like to believe that drug use has been relegated to the suburban rec rooms and ghetto crack houses of the late twentieth century, The Encyclopedia of Psychoactive Substances offers shocking, yet thoroughly enlightening evidence to the contrary. In fact, from Neolithic man to Queen Victoria, humans have abused all sorts of drugs in the name of religion, tradition, and recreation, including such "controlled substances" as chocolate, lettuce, and toads. From glue-sniffing to LSD to kava, The Encyclopedia of Psychoactive Substances provides the first reliable, comprehensive exploration of this fascinating and controversial topic. With over one hundred entries, acclaimed author Richard Rudgley covers not only the chemical and botanical background of each substance, but its physiological and psychological effect on the user. Of particular value is Rudgley’s emphasis on the historical and cultural role of these mind-altering substances. Impeccably researched and hugely entertaining, The Encyclopedia of Psychoactive Substances will appeal to anyone interested in one of the most misunderstood and yet also most widespread of human activities - the chemical quest for an altered state of consciousness.
