*Mathematical Modeling in Science and Engineering* Ismael Herrera, George F. Pinder, 2012-03-19 A powerful unified approach to mathematical and computational modeling in science and engineering Mathematical and computational modeling makes it possible to predict the behavior of a broad range of systems across a broad range of disciplines This text guides students and professionals through the axiomatic approach a powerful method that will enable them to easily master the principle types of mathematical and computational models used in engineering and science Readers will discover that this axiomatic approach not only enables them to systematically construct effective models it also enables them to apply these models to any macroscopic physical system Mathematical Modeling in Science and Engineering focuses on models in which the processes to be modeled are expressed as systems of partial differential equations It begins with an introductory discussion of the axiomatic formulation of basic models setting the foundation for further topics such as Mechanics of classical and non classical continuous systems Solute transport by a free fluid Flow of a fluid in a porous medium Multiphase systems Enhanced oil recovery Fluid mechanics Throughout the text diagrams are provided to help readers visualize and better understand complex mathematical concepts A set of exercises at the end of each chapter enables readers to put their new modeling skills into practice There is also a bibliography in each chapter to facilitate further investigation of individual topics Mathematical Modeling in Science and Engineering is ideal for both students and professionals across the many disciplines of science and engineering that depend on mathematical and computational modeling to predict and understand complex systems

*The Fluid Dynamic Basis for Actuator Disc and Rotor Theories* G.A.M. van Kuik, 2022-06-09 The first rotor performance predictions were published by Joukowsky exactly 100 years ago Although a century of research has expanded the knowledge of rotor aerodynamics enormously and modern computer power and measurement techniques now enable detailed analyses that were previously out of reach the concepts proposed by Froude Betz Joukowsky and Glauert for modelling a rotor in performance calculations are still in use today albeit with modifications and expansions This book is the result of the author s curiosity as to whether a return to these models with a combination of mathematics dedicated computations and wind tunnel experiments could yield more physical insight and answer some of the old questions still waiting to be resolved Although most of the work included here has been published previously the book connects the various topics linking them in a coherent storyline The Fluid Dynamic Basis for Actuator

Disc and Rotor Theories was first published in 2018 This Revised Second Edition 2022 will be of interest to those working in all branches of rotor aerodynamics wind turbines propellers ship screws and helicopter rotors It has been written for proficient students and researchers and reading it will demand a good knowledge of inviscid fluid mechanics Jens N rk r S rensen DTU Technical University of Denmark a great piece of work which in a consistent way highlights many of the items that the author has worked on through the years All in all an impressive contribution to the classical work on propellers wind turbines Peter Schaffarczyk Kiel University of Applied Sciences Germany a really impressive piece of work Carlos Sim o Ferreira Technical University Delft This is a timely book for a new generation of rotor aerodynamicists from wind turbines to drones and personal air vehicles In a time where fast numerical solutions for aerodynamic design are increasingly available a clear theoretical and fundamental formulation of the rotor wake problem will help professionals to evaluate the validity of their design problem The Fluid Dynamic Basis for Actuator Disc and Rotor Theories is a pleasure to read while the structure text and figures are just as elegant as the theory presented The cover shows The Red Mill by Piet Mondriaan 1911 collection Gemeentemuseum Den Haag Cover image 2022 Mondrian Holtzman Trust
