The Pea and the Sun Leonard M. Wapner, 2005-04-29 Take an apple and cut it into five pieces Would you believe that these five pieces can be reassembled in such a fashion so as to create two apples equal in shape and size to the original Would you believe that you could make something as large as the sun by breaking a pea into a finite number of pieces and putting it back together again Neither did Leonard Wapner author of *The Pea and the Sun* when he was first introduced to the Banach Tarski paradox which asserts exactly such a notion Written in an engaging style *The Pea and the Sun* catalogues the people events and mathematics that contributed to the discovery of Banach and Tarski s magical paradox Wapner makes one of the most interesting problems of advanced mathematics accessible to the non mathematician

The Cognitive-Theoretic Model of the Universe: A New Kind of Reality Theory Christopher Michael Langan, 2002-06-01 Paperback version of the 2002 paper published in the journal Progress in Information Complexity and Design PCID ABSTRACT Inasmuch as science is observational or perceptual in nature the goal of providing a scientific model and mechanism for the evolution of complex systems ultimately requires a supporting theory of reality of which perception itself is the model or theory to universe mapping Where information is the abstract currency of perception such a theory must incorporate the theory of information while extending the information concept to incorporate reflexive self processing in order to achieve an intrinsic self contained description of reality This extension is associated with a limiting formulation of model theory identifying mental and physical reality resulting in a reflexively self generating self modeling theory of reality identical to its universe on the syntactic level By the nature of its derivation this theory the Cognitive Theoretic Model of the Universe or CTMU can be regarded as a supertautological reality theoretic extension of logic Uniting the theory of reality with an advanced form of computational language theory the CTMU describes reality as a Self Configuring Self Processing Language or SCSPL a reflexive intrinsic language characterized not only by self reference and recursive self definition but full self configuration and self execution reflexive read write functionality SCSPL reality embodies a dual aspect monism consisting of infocognition self transducing information residing in self recognizing SCSPL elements called syntactic operators The CTMU identifies itself with the structure of these operators and thus with the distributive syntax of its self modeling SCSPL universe including the reflexive grammar by which the universe refines itself from unbound telesis or UBT a primordial realm of infocognitive potential free of informational constraint Under the guidance of a limiting intrinsic form of anthropic principle called the Telic Principle SCSPL evolves by telic recursion jointly configuring syntax and state while maximizing a generalized self selection parameter and adjusting on the fly to freely changing internal conditions SCSPL relates space time and object by means of conspansive duality and conspansion an SCSPL grammatical process featuring an alternation between dual phases of existence associated with design and actualization and related to the familiar wave particle duality of quantum mechanics By distributing the design phase of reality over the actualization phase conspansive spacetime also provides a distributed mechanism for Intelligent Design adjoining to the restrictive principle of natural selection a basic means of generating information and complexity Addressing physical evolution on not only the biological but cosmic level the CTMU addresses the most evident deficiencies and paradoxes associated with conventional discrete and continuum models of reality including temporal directionality and accelerating cosmic expansion while preserving virtually all of the major benefits of current scientific and mathematical paradigms

What's Happening in the Mathematical Sciences Barry Cipra, Mathematicians like to point out that mathematics is universal In spite of this most people continue to view it as either mundane balancing a checkbook or mysterious cryptography This fifth volume of the What s Happening series contradicts that view by showing that mathematics is indeed found everywhere in science art history and our everyday lives Here is some of what you ll find in this volume Mathematics and Science Mathematical biology Mathematics was key to cracking the genetic code Now new mathematics is needed to understand the three dimensional structure of the proteins produced from that code Celestial mechanics and cosmology New methods have revealed a multitude of solutions to the three body problem And other new work may answer one of cosmology s most fundamental questions What is the size and shape of the universe Mathematics and Everyday Life Traffic jams New models are helping researchers understand where traffic jams come from and maybe what to do about them Small worlds Researchers have found a short distance from theory to applications in the study of small world networks Elegance in Mathematics Beyond Fermat s Last Theorem Number theorists are reaching higher ground after Wiles astounding 1994 proof new developments in the elegant world of elliptic curves and modular functions The Millennium Prize Problems The Clay Mathematics Institute has offered a million dollars for solutions to seven important and difficult unsolved problems These are just some of the topics of current interest that are covered in this latest volume of What s Happening in the Mathematical Sciences The book has broad appeal for a wide spectrum of mathematicians and scientists from high school students through advanced level graduates and researchers

Journey Through Genius William Dunham, 1991-08 Like masterpieces of art music and literature great mathematical theorems are creative milestones works of genius destined to last forever Now William Dunham gives them the attention they deserve Dunham places each theorem within its historical context and explores the very human and often turbulent life of the creator from Archimedes the absentminded theoretician whose absorption in his work often precluded eating or bathing to Gerolamo Cardano the sixteenth century mathematician whose accomplishments flourished despite a bizarre array of misadventures to the paranoid genius of modern times Georg Cantor He also provides step by step proofs for the theorems each easily accessible to readers with no more than a knowledge of high school mathematics A rare combination of the historical biographical and mathematical Journey Through Genius is a fascinating introduction to a neglected field of human creativity It is mathematics presented as a series of works of art a fascinating lingering over individual examples of ingenuity and insight It is mathematics by lightning flash Isaac Asimov
