General Chemistry Ralph H. Petrucci,F. Geoffrey Herring,Jeffrey D. Madura,Carey Bissonnette,2010-05

Industrial Crystallization J. Mullin,2012-12-06 Industrial Crystallization Symposia have been organized by the Crystallization Research Group at the Czechoslovak Research Institute for Inorganic Chemistry Usti nad Labem since 1960 Over the years the increasing popularity of the unit operation of

crystallization has been clearly demonstrated by the steady increase in numbers of both the papers presented and the attendances at the meetings The 6th Symposium 13 September 1975 was organized jointly with the European Federation of Chemical Engineering Working Party on Crystallization and the 44 papers presented were arranged into four sessions A Secondary Nucleation B Crystal Growth Kinetics C Crystal Habit Modification D Crystallizer Design E Industrial Crystallizer Operation and Case Studies The same groupings are preserved in this edited version of the proceedings This is the first time that the Industrial Crystallization Symposium papers have appeared in one volume After the 5th 1972 Symposium authors were encouraged to submit their papers to an international journal specializing in crystallization However the results were not altogether satisfactory in that less than one third of the papers presented at the meeting were offered for consideration This time therefore the organizing committee decided to attempt to keep the papers together by making arrangements for their publication by Plenum Press

Solvent Systems and Their Selection in Pharmaceuticals and Biopharmaceutics Patrick Augustijns, Marcus Brewster, 2007-08-06 Solvent systems are integral to drug development and pharmaceutical technology This single topic encompasses numerous allied subjects running the gamut from recrystallization solvents to biorelevant media The goal of this contribution to the AAPS Biotechnology Pharmaceutical Aspects series is to generate both a practical handbook as well as a reference allowing the reader to make effective decisions concerning the use of solvents and solvent systems To this end the monograph was created by inviting recognized experts from a number of fields to author relevant sections Specifically 15 chapters have been designed covering the theoretical background of solubility the effect of ionic equilibria and pH on solubilization the use of solvents to effect drug substance crystallization and polymorph selection the use of solvent systems in high throughput screening and early discovery solvent use in preformulation the use of solvents in bio relevant dissolution and permeation experiments solvents and their use as toxicology vehicles solubilizing media and excipients in oral and parenteral formulation development specialized vehicles for protein formulation and solvent systems for topical and pulmonary drug administration The chapters are organized such that useful decision trees are included together with the scientific underpinning for their application In addition trends in the use of solvent systems and a balance of current views make this monograph useful to both the novice and experienced researcher and to scientists at all developmental stages from early discovery to late pharmaceutical operations
