$$\frac{\text{mg}}{\text{mL}} \times \frac{1,000 \text{ mcg}}{1 \text{ mL}} \times \frac{\text{mL}}{1 \text{ hour}} \times \frac{1 \text{ hour}}{60 \text{ minute}} = \text{mcg/minute}$$

(÷ by kg to get mcg/kg/minute)

## I.V. drips in unit per hour

$$\frac{D \text{ (desire)}}{H \text{ (on hand)}} \times V \text{ (volume)} = \text{units/hour} \text{ (# mL} \times \text{units/mL} = \text{dose)}$$

course of a drug round As much as it is not designed to be difficult it will make students think The list of decimals fractions and percentages given in the book are something you must learn Most nurses and practitioners have already covered this at school The book has employed the CASE approach which is a step by step method for performing dosage calculations drawn by the author from extensive experience across the continuum of care to bring a truly informative and dynamic resource to the readers The book is presented in an order which follows a logical and sequential tract Examples are offered and each chapter is interspersed with exercises for the reader to test their understanding The review of Basic Calculations has been well revised with more explanations and elaborations included in the worked examples The three methods of dosage calculation are presented side by side in table format for every dosage calculation updated chapter references updated content for dosing and safe injection practices per CDC Guidelines and the Joint Commission New information on heparin dosage protocol to reflect clinical environment practices has also been included The chapters are devoted to the review of basic calculations dosages of oral medications drug doses for injection intravenous infusion and pediatric doses This is a very useful book for nursing students who often wrestle with the complexities and nuances of drug calculation and administration It works well as either a reference or as a read through I would not recommend reading this book in one sitting otherwise numbers facts and figures will begin to blur into one Throughout the book drug dosages have been revised and updated It must be noted that the aim of Nursing Calculations is to teach relevant skills in arithmetic and this book is not meant to be used as a pharmacology reference We look forward to your feedback Nurse Academy
