Vinokurov, 2017-12-04 This open access book relates to the III Annual Conference hosted by The Ministry of Education and Science of the Russian Federation in December 2016 This event has summarized analyzed and discussed the interim results academic outputs and scientific achievements of the Russian Federal Targeted Programme Research and Development in Priority Areas of Development of the Russian Scientific and Technological Complex for 2014 2020 It contains 75 selected papers from 6 areas considered priority by the Federal Targeted Programme computer science ecology energy and energy efficiency lifesciences nanoscience nanotechnology and transport communications The chapters report the results of the 3 years research projects supported by the Programme and finalized in 2016 **Bioinspired Legged Locomotion** Maziar Ahmad Sharbafi, André Seyfarth, 2017-11-21 Bioinspired Legged Locomotion Models Concepts Control and Applications explores the universe of legged robots bringing in perspectives from engineering biology motion science and medicine to provide a comprehensive overview of the field With comprehensive coverage each chapter brings outlines and an abstract introduction new developments and a summary Beginning with bio inspired locomotion concepts the book's editors present a thorough review of current literature that is followed by a more detailed view of bouncing swinging and balancing the three fundamental sub functions of locomotion This part is closed with a presentation of conceptual models for locomotion Next the book explores bio inspired body design discussing the concepts of motion control stability efficiency and robustness The morphology of legged robots follows this discussion including biped and quadruped designs Finally a section on high level control and applications discusses neuromuscular models closing the book with examples of applications and

discussions of performance efficiency and robustness At the end the editors share their perspective on the future directions of each area presenting state of the art knowledge on the subject using a structured and consistent approach that will help researchers in both academia and industry formulate a better understanding of bioinspired legged robotic locomotion and quickly apply the concepts in research or products Presents state of the art control approaches with biological relevance Provides a thorough understanding of the principles of organization of biological locomotion Teaches the organization of complex systems based on low dimensional motion concepts control Acts as a guideline reference for future robots assistive devices with legged architecture Includes a selective bibliography on the most relevant published articles

Data-Centric Business and Applications Tamara Radivilova, Dmytro Ageyev, Natalia Kryvinska, 2020-06-20 This book addresses the challenges and opportunities of information data processing and management It also covers a range of methods techniques and strategies for making it more efficient approaches to increasing its usage and ways to minimize information data loss while improving customer satisfaction Information and Communication Technologies ICTs and the Service Systems associated with them have had an enormous impact on businesses and our day to day lives over the past three decades and continue to do so This development has led to the emergence of new application areas and relevant disciplines which in turn present new challenges and opportunities for service system usage The book provides practical insights into various aspects of ICT technologies for service systems Techniques for information data processing and modeling in service systems Strategies for the provision of information data processing and management Methods for collecting and analyzing information data Applications benefits and challenges of service system implementation Solutions to increase the performance of various service systems using the latest ICT technologies

Modeling, Identification and Control of Robots W. Khalil, E. Dombre, 2004-07-01 Written by two of Europe's leading robotics experts this book provides the tools for a unified approach to the modelling of robotic manipulators whatever their mechanical structure No other publication covers the three fundamental issues of robotics modelling identification and control It covers the development of various mathematical models required for the control and simulation of robots World class authority Unique range of coverage not available in any other book Provides a complete course on robotic control at an undergraduate and graduate level

Legged Robots that Balance Marc H. Raibert, 1986 This book by a leading authority on legged locomotion presents exciting engineering and science along with fascinating implications for theories of human motor control It lays fundamental groundwork in legged locomotion one of the least developed areas of robotics addressing the possibility of building useful legged robots that run and balance The book describes the study of physical machines that run and balance on just one leg including analysis computer simulation and laboratory experiments Contrary to expectations it reveals that control of such machines is not particularly difficult It describes how the principles of locomotion discovered with one leg can be extended to systems with several legs and reports preliminary experiments with a quadruped machine that runs using these principles

Raibert's work is unique in its emphasis on dynamics and active balance aspects of the problem that have played a minor role in most previous work. His studies focus on the central issues of balance and dynamic control while avoiding several problems that have dominated previous research on legged machines. Marc Raibert is Associate Professor of Computer Science and Robotics at Carnegie Mellon University and on the editorial board of The MIT Press journal *Robotics Research*. *Legged Robots That Balance* is fifteenth in the Artificial Intelligence Series edited by Patrick Winston and Michael Brady.

Dynamic Stabilisation of the Biped Lucy Powered by Actuators with Controllable Stiffness Bram

Vanderborght, 2010-09-07 This book reports on the developments of the bipedal walking robot Lucy. Special about it is that the biped is not actuated with the classical electrical drives but with pleated pneumatic artificial muscles. In an antagonistic setup of such muscles both the torque and the compliance are controllable. From human walking there is evidence that joint compliance plays an important role in energy efficient walking and running. Moreover pneumatic artificial muscles have a high power to weight ratio and can be coupled directly without complex gearing mechanism which can be beneficial towards legged mechanisms. Additionally they have the capability of absorbing impact shocks and store and release motion energy. This book gives a complete description of Lucy: the hardware, the electronics and the software. A hybrid simulation program combining the robot dynamics and muscle valve thermodynamics has been written to evaluate control strategies before implementing them in the real biped. *Stability Optimization of Open Loop Controlled Walking Robots* Katja D.

Mombaur, 2002 Modeling, Simulation and Optimization of Bipedal Walking Katja Mombaur, Karsten Berns, 2013-02-28 The model based investigation of motions of anthropomorphic systems is an important interdisciplinary research topic involving specialists from many fields such as Robotics, Biomechanics, Physiology, Orthopedics, Psychology, Neurosciences, Sports, Computer Graphics and Applied Mathematics. This book presents a study of basic locomotion forms such as walking and running is of particular interest due to the high demand on dynamic coordination, actuator efficiency and balance control. Mathematical models and numerical simulation and optimization techniques are explained in combination with experimental data which can help to better understand the basic underlying mechanisms of these motions and to improve them. Example topics treated in this book are: Modeling techniques for anthropomorphic bipedal walking systems, Optimized walking motions for different objective functions, Identification of objective functions from measurements, Simulation and optimization approaches for humanoid robots, Biologically inspired control algorithms for bipedal walking, Generation and deformation of natural walking in computer graphics, Imitation of human motions on humanoids, Emotional body language during walking, Simulation of biologically inspired actuators for bipedal walking machines, Modeling and simulation techniques for the development of prostheses, Functional electrical stimulation of walking. Fast Motions in Biomechanics and Robotics

Moritz Diehl, Katja Mombaur, 2007-07-13 In the past decades much progress has been made in the field of walking robots. The current state of technology makes it possible to create humanoid robots that nearly walk like a human being climb stairs or

avoid small stacles However the dream of a robot running as fast and as elegantly as a human is still far from becoming reality Control of such fast motions is still a big technological issue in robotics and the maximum running speed of contemporary robots is still much smaller than that of human track runners The conventional control approach that most of these robots are based on does not seem to be suitable to increase the running speeds up to a biological level In order to address this challenge we invited an interdisciplinary community of researchers from robotics biomechanics control engineering and applied mathematics to come together in Heidelberg at the Symposium Fast Motions in Biomechanics and Robotics Optimization Feedback Control which was held at the International Science Forum IWH on September 7 9 2005 The number of participants in this symposium was kept small in order to promote discussions and enable a fruitful exchange of ideas

Human Centered Robot Systems Helge Ritter, Gerhard Sagerer, Rüdiger Dillmann, Martin Buss, 2009-11-25 Human Centered Robotic Systems must be able to interact with humans such that the burden of adaptation lies with the machine and not with the human This book collates a set of prominent papers presented during a two day conference on Human Centered Robotic Systems held on November 19 20 2009 in Bielefeld University Germany The aim of the conference was to bring together researchers from the areas of robotics computer science psychology linguistics and biology who are all focusing on a shared goal of cognitive interaction A survey of recent approaches the current state of the art and possible future directions in this interdisciplinary field is presented It provides practitioners and scientists with an up to date introduction to this dynamic field with methods and solutions that are likely to significantly impact on our future lives

Coordination Control of Distributed Systems Jan H. van Schuppen, Tiziano Villa, 2014-09-25 This book describes how control of distributed systems can be advanced by an integration of control communication and computation The global control objectives are met by judicious combinations of local and nonlocal observations taking advantage of various forms of communication exchanges between distributed controllers Control architectures are considered according to increasing degrees of cooperation of local controllers fully distributed or decentralized control control with communication between controllers coordination control and multilevel control The book covers also topics bridging computer science communication and control like communication for control of networks average consensus for distributed systems and modeling and verification of discrete and of hybrid systems Examples and case studies are introduced in the first part of the text and developed throughout the book They include control of underwater vehicles automated guided vehicles on a container terminal control of a printer as a complex machine and control of an electric power system The book is composed of short essays each within eight pages including suggestions and references for further research and reading By reading the essays collected in the book Coordination Control of Distributed Systems graduate students and post docs will be introduced to the research frontiers in control of decentralized and of distributed systems Control theorists and practitioners with backgrounds in electrical mechanical civil and aerospace engineering will find in the book information and inspiration to transfer to their

fields of interest the state of art in coordination control *Field Robotics* Philippe Bidaud,2012 This book provides state of the art scientific and engineering research findings and developments in the area of mobile robotics and associated support technologies The book contains peer reviewed articles presented at the CLAWAR 2011 conference A great deal of interest is vested in the use of robots outside the factory environment The CLAWAR conference series established as a high profile international event acts as a platform for dissemination of research and development findings and supports the trend to address current interest in mobile robotics to meet the needs of mankind in various segments of the society Field robotics aims to bring technologies that allow autonomous systems to assist and or replace humans performing tasks that are difficult repetitive unpleasant or take place in hazardous environments These robotic systems will bring sociological and economic benefits through improved human safety increased equipment utilisation reduced maintenance costs and increased production

Radar Signal Processing and Its Applications Jian Li,Robert Hummel,Petre Stoica,Edmund G. Zelnio,2013-12-21 Radar Signal Processing and Its Applications brings together in one place important contributions and up to date research results in this fast moving area In twelve selected chapters it describes the latest advances in architectures design methods and applications of radar signal processing The contributors to this work were selected from the leading researchers and practitioners in the field This work originally published as Volume 14 Numbers 1 3 of the journal Multidimensional Systems and Signal Processing will be valuable to anyone working or researching in the field of radar signal processing It serves as an excellent reference providing insight into some of the most challenging issues being examined today

Gait Analysis in the Science of Rehabilitation Joel A. DeLisa,1998 Instrumented gait analysis systems offer objective evaluation of the effectiveness of the various rehabilitation treatments that are aimed at improving gait disabilities There are four sections in this report clinical observation review of the instrumental gait analysis systems the value of information resulting from instrumented gait analysis from the perspective of a psychiatrist an orthopedic surgeon discussion of future trends for gait laboratories The authors are experts from multiple rehabilitation specialties to give you an understanding of how gait analysis can be used to evaluate a person s walking abilities to maximize function maintain or improve quality of life Illustrations

Data-Centric Business and Applications Dmytro Ageyev,Tamara Radivilova,Natalia Kryvinska,2021-06-05 This book building on the authors previous work presents new communication and networking technologies challenges and opportunities of information data processing and transmission It also discusses the development of more intelligent and efficient communication technologies which are an essential part of current day to day life Information and Communication Technologies ICTs have an enormous impact on businesses and our day to day lives over the past three decades and continue to do so Modern methods of business information processing are opening exciting new opportunities for doing business on the basis of information technologies The book contains research that spans a wide range of communication and networking technologies including wireless sensor networks optical and telecommunication networks

storage area networks error free transmission and signal processing *Clinical Biomechanics of the Lower Extremities*
Ronald L. Valmassy,1996 CLINICAL BIOMECHANICS OF THE LOWER EXTREMITY is a comprehensive text addressing the principles of anatomic and biomechanical development and the clinical application of these principles to disease disorder management The emphasis of the book is on practical information applicable to the daily practice of lower extremity care Topics covered include the physical examination and the assessment of disorders having a biomechanical basis casting techniques prescription writing orthotic trouble shooting splinting and shoe prescription for athletic activity

Protein-protein Interactions (PPIs) Clyde R. Montgomery,2017 Protein protein interactions PPIs play an important role in vital biological processes such as metabolic and signaling pathways cell cycle control and DNA replication and transcription This book discusses types methods for detection and the analysis of PPIs Chapter One describes two key nuclear magnetic resonance NMR methods for the investigation of protein protein interactions chemical shift perturbation and residual dipolar coupling with practical tips on the preparation of samples NMR measurement and analysis Chapter Two describes the basic principles and provides a practical description of the recent technological developments in solution NMR spectroscopy for examining protein protein interactions Chapter Three focuses on identifying PPIs via many learning methods based on protein sequence information Chapter Four examines the thermodynamics of PPIs by isothermal titration calorimetry Chapter Five describes the general microscopic features of amyloid fibril structures and then discusses the macroscopic properties of protein aggregate with conformations such as packing hydration and enthalpy using thermodynamic variables in combination with densitometry and isothermal titration calorimetry Chapter Six reviews the special case of protein self association as a modulator of protein function
