### Gizmo Warm-up

A **chemical reaction** causes the chemical compositions of substances to change. **Reactants** are substances that enter into a reaction. **Products** are substances produced in the reaction. In the Theory Gizmo, you will experiment with the factors that influence the rate at which reactants are transformed into products in a chemical reaction.

You will need blue, green, and orange markers or colored pencils for the first part of this activity.

- Look at the key at the bottom of the SIMULATION pane. In the space below, draw the two reactants and two products of this chemical reaction.

Reactants:

Products:

- Click **Play** (▶). What do you see?

Reactant A breaks apart and bumps into Reactant B which is a light green ball against a blue ball. When Reactant A succeeds in break, the bonds of reactant B the orange substance on Reactant B breaks off and bonds with Reactant A forming Product B, leaving the two green substance molecules which are Product A.
