With all the interest in online publishing here in the 21st century, it's easy to lose sight of the fact that information is still widely disseminated through the good old medium of print. The advent of desktop publishing granted new levels of power and control to the layout artist and graphic designer, but it hasn't made the process of getting the perfect print foolproof. Tabletops - Horizontal Interactive Displays Sep 03 2023 The objects displayed on a table can take multiple forms. In meetings, it is still very often printed paper although its content was originally created on a computer. The content can also be a "table", but now in the mathematical sense, showing, e. g. , the budget of a project. Then,

we have a “table” on the table. Most often, the computer-generated contents are subject of frequent changes or dynamic in nature. It is a logical consequence to avoid the detour and the inherent media break by transforming the surface of the table into a display able to show media that are active and can be computer-generated and computer-controlled. At the same time, it is desirable to maintain the inherent features and affordances of working with the objects and the contents while sitting or standing around a table. Electronic Meeting Rooms On the basis of these and other elaborate considerations, we started to design in 1992/1993 an electronic meeting room in Darmstadt at GMD-IPSI (later Fraunhofer IPSI). The setup of our custom-built DOLPHIN-System consisted of a “traditional” large rectangular wooden table with four physically integrated workstation-like computers with at screens. This set-up was complemented by linking a large vertical pen-operated interactive display, at that time the first LiveBoard outside of Xerox PARC (two of which I was able to get to Darmstadt after my stay at Xerox PARC in 1990).
