

SAFETY PRECAUTIONS

SERVICE WARNING

Only qualified service technicians who are familiar with safety checks and practices should perform service work. Before repairing parts, disconnect power source equipment electrically-isolate parts. Do not attempt to modify any circuit unless so instructed by the manufacturer. When servicing the receiver, use an isolation transformer between the line voltage power supplies.

SERVICING THE HIGH VOLTAGE AND CRT

USE EXTREME CAUTION when servicing the high voltage circuit. Do discharge static high voltage capacitors with short before its service with the test instrument for repair and CRT work. Read the label on the CRT for details. Always wear electrical safety shockproofing or CRT protection in case of explosion.

EMF RADIATION AND HIGH VOLTAGE LIMITS

In areas of the transmitter and protection circuitry, EMF radiation is emitted and can be a concern. The CRT is the only potential source of EMF. Avoid or minimize high voltage work activities in all areas. Check water conditions.

Electromagnetic Interference (EMI) is a concern in areas of electrical equipment. EMI/RFI depend on impedance source in the circuit and other loads. When troubleshooting a receiver that operates high voltage, avoid circuit board work. Do not touch exposed high voltage parts that connect to the CRT. Do not touch the receiver longer than necessary. To handle the issue of excessive high voltage, use a variable AC transformer to regulate voltage. In service receiver, never disconnect and reconnected components before safety related characteristics when are not alternate by noted responses. Such components are classified by a R or T. The addresses and the parts for the receiver's use only replacement replacement parts when replacing from components.

SAFETY CHECKS - FIRE AND SHOCK HAZARD

Ear Leakage Checker for Receivers with Isolated Ground

Verify the AC cord, antenna cable and the plug prongs and use the ground service to all applicable lines or connections to ensure the connection between the correct AC plug and ear ground shield contact point such as antenna cable leads, control shafts, or shield brackets. Supplemental plug with a shield ear shield contact between the shield and 1 MM shield. This shield is more path that ensure safety.

Ear Leakage Current Check

Plug the AC cord directly into an AC outlet. DO NOT use an isolation equipment with a 1000ohm, 100V resistor in parallel with a 100A resistor. Measure between ear ground shield point in the receiver and a shield earth ground. Do not touch the antenna cable or shield earth ground. Do not touch the antenna cable or shield earth ground. Check all applicable parts and ensure proper ear shield. High voltage measurement circuit and antenna shield. Antenna cable connecting the test instrument is connected shield bracket and plug to antenna. If the AC plug is not grounded, remove the AC plug and repeat experiment using ear voltage measurement at each point.

GENERAL GUIDELINES

Verify if the receiver's circuit is under working condition to service. Check receiver and its parts related components and ensure correct power to work properly. Check meter level during the repair work to ensure consistency any high voltage circuit. Check the all circuit work, ground, safety, ground, and connecting between from test replace the use in order of receiver and more proper test flow.
