Division, Board on Health Sciences Policy, Committee on Pain Management and Regulatory Strategies to Address Prescription Opioid Abuse, 2017-09-28 Drug overdose driven largely by overdose related to the use of opioids is now the leading cause of unintentional injury death in the United States. The ongoing opioid crisis lies at the intersection of two public health challenges: reducing the burden of suffering from pain and containing the rising toll of the harms that can arise from the use of opioid medications. Chronic pain and opioid use disorder both represent complex human conditions affecting millions of Americans and causing untold disability and loss of function. In the context of the growing opioid problem, the U.S. Food and Drug Administration (FDA) launched an Opioids Action Plan in early 2016. As part of this plan, the FDA asked the National Academies of Sciences, Engineering, and Medicine to convene a committee to update the state of the science on pain research, care, and education and to identify actions the FDA and others can take to respond to the opioid epidemic with a particular focus on informing FDA's development of a formal method for incorporating individual and societal considerations into its risk-benefit framework for opioid approval and monitoring.

**Transforming the Workforce for Children Birth Through Age 8** National Research Council, Institute of Medicine, Board on Children, Youth, and Families, Committee on the Science of Children Birth to Age 8: Deepening and Broadening the Foundation for Success, 2015-07-23 Children are already learning at birth and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective to nurture young children and secure their future success, the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. *Transforming the Workforce for Children Birth Through Age 8* explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. *Transforming the Workforce for Children Birth Through Age 8* offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of

this book provide an opportunity to improve the quality of the care and the education that children receive and ultimately improve outcomes for children

**Communities in Action** National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Population Health and Public Health Practice, Committee on Community-Based Solutions to Promote Health Equity in the United States, 2017-04-27 In the United States some populations suffer from far greater disparities in health than others Those disparities are caused not only by fundamental differences in health status across segments of the population but also because of inequities in factors that impact health status so called determinants of health Only part of an individual's health status depends on his or her behavior and choice community wide problems like poverty unemployment poor education inadequate housing poor public transportation interpersonal violence and decaying neighborhoods also contribute to health inequities as well as the historic and ongoing interplay of structures policies and norms that shape lives When these factors are not optimal in a community it does not mean they are intractable such inequities can be mitigated by social policies that can shape health in powerful ways *Communities in Action Pathways to Health Equity* seeks to delineate the causes of and the solutions to health inequities in the United States This report focuses on what communities can do to promote health equity what actions are needed by the many and varied stakeholders that are part of communities or support them as well as the root causes and structural barriers that need to be overcome

*The North American Model of Wildlife Conservation* Shane P. Mahoney, Valerius Geist, 2019-09-10 The foremost experts on the North American Model of Wildlife Conservation come together to discuss its role in the rescue recovery and future of our wildlife resources At the end of the nineteenth century North America suffered a catastrophic loss of wildlife driven by unbridled resource extraction market hunting and unrelenting subsistence killing This crisis led powerful political forces in the United States and Canada to collaborate in the hopes of reversing the process not merely halting the extinctions but returning wildlife to abundance While there was great understanding of how to manage wildlife in Europe where wildlife management was an old mature profession Continental methods depended on social values often unacceptable to North Americans Even Canada a loyal colony of England

abandoned wildlife management as practiced in the mother country and joined forces with like minded Americans to develop a revolutionary system of wildlife conservation In time and surviving the close scrutiny and hard ongoing debate of open democratic societies this series of conservation practices became known as the North American Model of Wildlife Conservation In this book editors Shane P Mahoney and Valerius Geist both leading authorities on the North American Model bring together their expert colleagues to provide a comprehensive overview of the origins achievements and shortcomings of this highly successful conservation approach This volume reviews the emergence of conservation in late nineteenth early twentieth century North America provides detailed explorations of the Model s institutions principles laws and policies places the Model within ecological cultural and socioeconomic contexts describes the many economic social and cultural benefits of wildlife restoration and management addresses the Model s challenges and limitations while pointing to emerging opportunities for increasing inclusivity and optimizing implementation Studying the North American experience offers insight into how institutionalizing policies and laws while incentivizing citizen engagement can result in a resilient framework for conservation Written for wildlife professionals researchers and students this book explores the factors that helped fashion an enduring conservation system one that has not only rescued recovered and sustainably utilized wildlife for over a century but that has also advanced a significant economic driver and a greater scientific understanding of wildlife ecology Contributors Leonard A Brennan Rosie Cooney James L Cummins Kathryn Frens Valerius Geist James R Heffelfinger David G Hewitt Paul R Krausman Shane P Mahoney John F Organ James Peek William Porter John Sandlos James A Schaefer
