Macondo Well Deepwater Horizon Blowout National Research Council,National Academy of Engineering,Board on Environmental Studies and Toxicology,Marine Board,Committee on the Analysis of Causes of the Deepwater Horizon Explosion, Fire, and Oil Spill to Identify Measures to Prevent Similar Accidents to the Future,2012-03-02 The blowout of the Macondo well on April 20 2010 led to enormous consequences for the individuals involved in the drilling operations and for their families Eleven workers on the Deepwater Horizon drilling rig lost their lives and 16 others were seriously injured

There were also enormous consequences for the companies involved in the drilling operations to the Gulf of Mexico environment and to the economy of the region and beyond. The flow continued for nearly 3 months before the well could be completely killed during which time nearly 5 million barrels of oil spilled into the gulf. Macondo Well Deepwater Horizon Blowout examines the causes of the blowout and provides a series of recommendations for both the oil and gas industry and government regulators intended to reduce the likelihood and impact of any future losses of well control during offshore drilling. According to this report, companies involved in offshore drilling should take a system safety approach to anticipating and managing possible dangers at every level of operation, from ensuring the integrity of wells to designing blowout preventers that function under all foreseeable conditions in order to reduce the risk of another accident as catastrophic as the Deepwater Horizon explosion and oil spill. In addition, an enhanced regulatory approach should combine strong industry safety goals with mandatory oversight at critical points during drilling operations. Macondo Well Deepwater Horizon Blowout discusses ultimate responsibility and accountability for well integrity and safety of offshore equipment, formal system safety education and training of personnel engaged in offshore drilling, and guidelines that should be established so that well designs incorporate protection against the various credible risks associated with the drilling and abandonment process. This book will be of interest to professionals in the oil and gas industry, government decision makers, environmental advocacy groups, and others who seek an understanding of the processes involved in order to ensure safety in undertakings of this nature.

Encyclopedia of Maritime and Offshore Engineering John Carlton, Paul Jukes, Yoo-Sang Choo, 2018-07-16. Arctic Offshore Engineering Andrew Clennel Palmer,Ken Croasdale,2013 There is an increasing need to construct engineering structures in the Arctic sea The requirement is

principally generated by the oil and gas industry because of the substantial reserves that are known to exist offshore in the Beaufort Sea the Caspian Sea the Barents Sea the Pacific Ocean off the coast of Sakhalin the Canadian Arctic and almost certainly elsewhere Structures have to withstand the severe environmental forces generated by sea ice a subject that is developing rapidly but is still far from completely understood Underwater pipelines have to be safe against ice gouging and strudel scour but also have to be constructed safely and economically The social and human environment has to be understood and respected This important book intentionally takes a broad view and vividly accounts for the many and often subtle interactions between the different factors It is illustrated by case studies of actual projects
