

NUTRITION IN THE ICU

NUTRITION – KEY FACTS

At least **one third** of patients in developed countries have some degree of malnutrition upon admission to the hospital.

If left untreated, approximately **two thirds** of those patients will experience a further decline in their nutrition status.

Among patients who are not malnourished upon admission, nearly **one third** may become malnourished while in the hospital.

According to the NutritionDay ICU Audit, it takes **1 week** to reach 1500kcal intake in most ICUs in the world.

Undernutrition is associated with **prolonged** length of stay, mechanical ventilation, infection and mortality.

Overnutrition is associated with **prolonged** mechanical ventilation and infection, and increased morbidity.
