*An instruction manual for life, love, and relationships by a brilliant young scientist whose Asperger's syndrome allows her--and us--to see ourselves in a different way...and to be better at being human Diagnosed with Autism Spectrum Disorder at the age of eight, Camilla Pang struggled to understand the world around her. Desperate for a solution, she asked her mother if there was an instruction manual for humans that she could consult. With no blueprint to life, Pang began to create her own, using the language she understands best: science. That lifelong project eventually resulted in *An Outsider's Guide to Humans*, an original and incisive exploration of human nature and the strangeness of social norms, written from the outside looking in--which is helpful to even the most neurotypical thinker. Camilla Pang uses a set of scientific principles to examine life's everyday interactions: - How machine learning can help us sift through data and make more rational decisions - How proteins form strong bonds, and what they teach us about embracing individual differences to form diverse groups - Why understanding thermodynamics is the key to seeking balance over seeking perfection - How prisms refracting light can keep us from getting overwhelmed by our fears and anxieties, breaking them into manageable and separate "wavelengths" Pang's unique perspective of the world tells us so much about ourselves--who we are and why we do the things we do--and is a fascinating guide to living a happier and more connected life. A New York Times Editors' Choice Book From the critically-acclaimed author of *Shelter*, an unflinching portrayal of a woman trying to come to terms with the ghosts of her past and the tortured realities of a deeply divided America. Elinor Hanson, a forty-something former model, is struggling to reinvent herself as a freelance writer when she receives an unexpected assignment. Her mentor from grad school offers her a chance to write for a prestigious magazine about the Bakken oil boom in North Dakota. Elinor grew up near the Bakken, raised by an overbearing father and a distant Korean mother who met and married when he was stationed overseas. After decades away from home, Elinor returns to a landscape she hardly recognizes, overrun by tens of thousands of newcomers. Surrounded by roughnecks seeking their fortunes in oil and long-time residents worried about their changing community, Elinor experiences a profound sense of alienation and grief. She rages at the unrelenting male gaze, the locals who still see her as a foreigner, and the memories of her family's estrangement after her mother decided to escape her unhappy marriage, leaving Elinor and her sister behind. The longer she pursues this potentially career-altering assignment, the more her past intertwines with the story she's trying to tell, revealing disturbing new realities that will forever change her and the way she looks at the world. With spare and graceful prose, Jung Yun's *O Beautiful* presents an immersive portrait of a community rife with tensions and competing interests, and one woman's attempts to reconcile her anger with her love of a beautiful, but troubled land. Includes bonus material, a new foreword by the author, and a discussion guide. Along with "what happens here stays here" and "Circus Circus isn't that bad," one of the biggest Las Vegas myths is that so-called insiders are the city's best sources of tips, reviews, and information. Often, however, obsessive Las Vegas visitors offer more trustworthy suggestions and accurate insights about the Las Vegas Strip and Fremont Street. An unapologetic Las Vegas outsider, author Tim Dressen shares advice, hints, and unfiltered opinions gathered as cohost of *Five Hundy by Midnight*, the *Original Las Vegas Podcast*, for more than a decade. With the same irreverent spirit as the podcast, *The Outsiders' Guide to Las Vegas* is packed with useful information, entertaining perspectives, and more than a few off-the-rails rants. This is the Las Vegas guide by an outsider, inspired by outsiders, and for outsiders. Designed to develop appreciation of literature & improve reading & comprehension skills. Where do we look when we look inward? In what sort of space does our inner life take place? Augustine said that to turn inward is to find oneself in a library of memories, while the Indian Buddhist tradition holds that we are self-illuminating beings casting light onto a world of shadows. And a disquieting set of dissenters has claimed that inwardness is merely an illusion—or, worse, a deceit. Jonardon Ganeri explores philosophical reflections from many of the world's intellectual cultures, ancient and modern, on how each of us inhabits an inner world. In brief and lively chapters, he ranges across an unexpected assortment of diverse thinkers: Buddhist, Hindu, Islamic, Chinese, and Western philosophy and literature from the Upanishads, Socrates, and Avicenna to Borges, Simone Weil, and Raymond Carver. Ganeri examines the various metaphors that have been employed to explain interiority—shadows and mirrors, masks and disguises, rooms and enclosed spaces—as well as the interfaces and boundaries between inner and outer worlds. Written in a cosmopolitan spirit, this book is a thought-provoking consideration of the value—or peril—of turning one's gaze inward for all readers who have sought to map the geography of the mind. Biology, which occupies a special place between the exact and human sciences, has historically attracted many thinkers whose primary training was in other fields: mathematics, physics, chemistry, linguistics, philosophy, history, anthropology, engineering, and even literature. These outsiders brought with them ideas and tools that were foreign to biology, but which, when applied to biological problems, helped to bring about dramatic, and often surprising, breakthroughs. This volume brings together eighteen thought-provoking biographical essays of some of the most remarkable outsiders of the modern era, each written by an authority in the respective field. From Noam Chomsky using linguistics to answer questions about brain architecture, to Erwin Schrödinger contemplating DNA as a physicist would, to Drew Endy tinkering with Biobricks to create new forms of synthetic life, the outsiders featured here make clear just how much there is to gain from disrespecting conventional boundaries. Innovation, it turns

out, often relies on importing new ideas from other fields. Without its outsiders, modern biology would hardly be recognizable.
