Multi-dimensional Approaches Towards New Technology Ashish Bharadwaj, Vishwas H. Devaiah, Indranath Gupta, 2018-07-23 This open access edited book captures the complexities and conflicts arising at the interface of intellectual property rights IPR and competition law To do so it discusses four specific themes a policies governing functioning of standard setting organizations SSOs transparency and incentivising future innovation b issue of royalties for standard essential patents SEPs and related disputes c due process principles procedural fairness and best practices in competition law and d coherence of patent policies and consonance with competition law to support innovation in new technologies Many countries have formulated policies and re oriented their economies to foster technological innovation as it is seen as a major source of economic growth At the same time there have been tensions between patent laws and competition laws despite the fact that both are intended to enhance consumer welfare In this regard licensing of SEPs has been debated extensively although in most instances innovators and implementers successfully negotiate licensing of SEPs However there have been instances where disagreements on royalty base and royalty rates terms of licensing bundling of patents in licenses pooling of licenses have arisen and this has resulted in a surge of litigation in various jurisdictions and also drawn the attention of competition anti trust regulators Further a lingering lack of consensus among scholars industry experts and regulators regarding solutions and techniques that are apposite in these matters across jurisdictions has added to the confusion This book looks at the processes adopted by the competition anti trust regulators to apply the principles of due process and procedural fairness in investigating abuse of dominance cases against innovators

Solutions In Action Karl Lanngren, 2012-12-02 Solitons in Action is a collection of papers that discusses the concept of a wave packet or pulse known as a soliton One paper reviews the development of the solitary wave concept with emphasis on the difference between a solitary wave and a soliton The Korteweg deVries KdV equation shows the interactions between infinite sets of conservation laws and the inverse scattering transform method The Backlund transform technique produces hierarchies of multisoliton solutions for nonlinear wave equations The Gel'fand Levitan algorithm can effect an inverse scattering calculation that relates changes in the scattering data to changes in the solution of corresponding wave equation One paper points out that concepts in differential geometry can show the fundamental nature of soliton behavior and the relationship between inverse scattering and the Backlund transformation Solitons in action can be viewed as magnetic flux propagates through a gap between two closely spaced superconductors in quantum units This view results in a simplified procedure for perturbation expansions around multisoliton solutions This collection can prove useful for researchers involved in the study of fluid mechanics of pure and applied sciences of mathematical sciences and of wave theory
