Assessment of Fuel Economy Technologies for Light-Duty Vehicles Dec 14 2023 Various combinations of commercially available technologies could greatly reduce fuel consumption in passenger cars, sport-utility vehicles, minivans, and other light-duty vehicles without compromising vehicle performance or safety. Assessment of Technologies for Improving Light Duty Vehicle Fuel Economy estimates the potential fuel savings and costs to consumers of available technology combinations for three types of engines: spark-ignition gasoline, compression-ignition diesel, and hybrid. According to its estimates, adopting the full combination of improved technologies in medium and large cars and pickup trucks with spark-ignition engines could reduce fuel consumption by 29 percent at an additional cost of \$2,200 to the consumer. Replacing spark-ignition engines with diesel engines and components would yield fuel savings of about 37 percent at an added cost of approximately \$5,900 per vehicle, and replacing spark-ignition engines with hybrid engines and components would reduce fuel consumption by 43 percent at an increase of \$6,000 per vehicle. The book focuses on fuel consumption-the amount of fuel consumed in a given driving distance-because energy savings are directly related to the amount of fuel used. In contrast, fuel economy measures how far a vehicle will travel with a gallon of fuel. Because fuel consumption data indicate money saved on fuel purchases and reductions in carbon dioxide emissions, the book finds that vehicle stickers should provide consumers with fuel consumption data in addition to fuel economy information.

Just Needs a Recharge Mar 17 2024 Air conditioning in vintage cars often falls into disrepair, as owners figure that it never really worked all that well when it was new, and assume that rejuvenation would be prohibitively expensive. In his new book, *Just Needs a Recharge: The Hack Mechanic Guide to Vintage Air Conditioning*, Rob Siegel details exactly what's needed to resurrect long-dead air conditioning in a vintage car, or install a/c in a car that never had it. In a level of detail not found in any other automotive a/c book, Rob reveals what you need to know about flare and o-ring fittings, upgrading to a rotary-style compressor and a parallel-flow condenser, making or specifying custom hoses, and selecting refrigerant so that the a/c blows cold enough to be usable. Although the book draws from Rob's BMW experience (with specifics for the BMW 2002 and 3.0CS), and concentrates on vintage a/c systems (those that have flare fittings and originally contained R12), most of the information applies to any air conditioning system, foreign or domestic, vintage or modern. Written in Rob's entertaining Hack Mechanic narrative voice, and including 240 photographs and illustrations, the book covers theory, the choice of refrigerant (R12, R134a, other EPA-approved, non-EPA-approved), legality, tools for a/c work, fittings and sizes, the compressor, the evaporator assembly and expansion valve or orifice tube, the condenser and fan, the receiver/drier or accumulator, electrical connections and compressor cycling, connecting and using manifold gauges, the basic steps for a/c rejuvenation, from-scratch a/c retrofit, making and installing hoses, flushing the system, pressure-testing and leak detection, evacuating and charging the system troubleshooting, and other things that heat up the cabin.

Lost in Shangri-La Nov 01 2022 "A lost world, man-eating tribesmen, lush and impenetrable jungles, stranded American fliers (one of them a dame with great gams, for heaven's sake), a startling rescue mission. . . . This is a true story made in heaven for a writer as talented as Mitchell Zuckoff. Whew—what an utterly compelling and deeply satisfying read!" —Simon Winchester, author of Atlantic Award-winning former Boston Globe reporter Mitchell Zuckoff unleashes the exhilarating, untold story of an extraordinary World War II rescue mission, where a plane crash in the South Pacific plunged a trio of U.S. military personnel into a land that time forgot. Fans of Hampton Sides' *Ghost Soldiers*, Marcus Luttrell's *Lone Survivor*, and David Grann's *The Lost City of Z* will be captivated by Zuckoff's masterfully recounted, all-true story of danger, daring, determination, and discovery in jungle-clad New Guinea during the final days of WWII.

Generation Trex Jun 27 2022 *Generation TreX: My Thoughts* is a journal recounting the personal experiences and insights of a young man while he plans a 27-month non-motorized trek of service throughout America. 1/24/00 - What will become of this quest? Will anyone care? I don't have an answer for these questions and I'm not sure I really want to. To be honest, I'm feeling a little tired of this idealistic crusade. I have no desire to make it a big hoopla event. I've been writing that the success of the Trek depends upon my commitment to the principles and not the attention it receives. In reality, however, I have been living the opposite. I have gotten so focused on the image and organization of the Trek that I have stopped simply doing it. This Trek is about exemplifying certain qualities in life, not getting on a TV show. It is about having the courage to display an example for others to follow. I don't have control of its scale (how many people hear about it), I just have control of its success (living its principles regardless of the circumstances). If I make it home it will be nothing short of a miracle. I don't know if I will complete the goal of the 10,350 mile Trek. I do know that I believe in its mission and have to try. I may set out on the Trek, but it is the support team and the people I meet along the way that will bring me home.

Incompetence Dec 02 2022 Bad is the new good. In the not too distant future the European Union enacts its most far reaching human rights legislation ever. The incompetent have been persecuted for too long. After all it's not their fault they can't do it right, is it? So it is made illegal to sack or otherwise discriminate against anyone for being incompetent. And now a murder has been committed and our possibly incompetent detective must find out who the murderer is. As long as he can find directions to get him through the mean streets.

Lives of Boulton and Watt. Principally from the Original Soho Mss May 15 2021 This is an invaluable work on Boulton and Watt, an early British engineering and manufacturing firm in the business of designing and producing marine and stationary steam engines. It was founded in 1775 as a partnership between the Scottish engineer James Watt and the English manufacturer Matthew Boulton to exploit Watt's patent for a steam engine with a different condenser. The firm played a significant role in Industrial Revolution and evolved to be a prominent producer of steam

engines in the 19th century. This work was a result of the memoirs of Boulton and Watt. The writer described the formation and evolution of the company as well as details on how they planned and carried out the operations in simple terms. It's a perfect read for people curious to learn about the engineering practices in the olden days.

Command Of The Air Aug 18 2021 In the pantheon of air power spokesmen, Giulio Douhet holds center stage. His writings, more often cited than perhaps actually read, appear as excerpts and aphorisms in the writings of numerous other air power spokesmen, advocates-and critics. Though a

highly controversial figure, the very controversy that surrounds him offers to us a testimonial of the value and depth of his work, and the need for airmen today to become familiar with his thought. The progressive development of air power to the point where, today, it is more correct to refer to aerospace power has not outdated the notions of Douhet in the slightest. In fact, in many ways, the kinds of technological capabilities that we enjoy as a global air power provider attest to the breadth of his vision. Douhet, together with Hugh "Boom" Trenchard of Great Britain and William "Billy" Mitchell of the United States, is justly recognized as one of the three great spokesmen of the early air power era. This reprint is offered in the spirit of continuing the dialogue that Douhet himself so perceptively began with the first edition of this book, published in 1921. Readers may well find much that they disagree with in this book, but also much that is of enduring value. The vital necessity of Douhet's central vision—that command of the air is all important in modern warfare—has been proven throughout the history of wars in this century, from the fighting over the Somme to the air war over Kuwait and Iraq.

Why Startups Fail Oct 12 2023 If you want your startup to succeed, you need to understand why startups fail. "Whether you're a first-time founder or looking to bring innovation into a corporate environment, Why Startups Fail is essential reading."—Eric Ries, founder and CEO, LTSE, and New York Times bestselling author of *The Lean Startup* and *The Startup Way* Why do startups fail? That question caught Harvard Business School professor Tom Eisenmann by surprise when he realized he couldn't answer it. So he launched a multiyear research project to find out. In *Why Startups Fail*, Eisenmann reveals his findings: six distinct patterns that account for the vast majority of startup failures. • **Bad Bedfellows.** Startup success is thought to rest largely on the founder's talents and instincts. But the wrong team, investors, or partners can sink a venture just as quickly. • **False Starts.** In following the oft-cited advice to "fail fast" and to "launch before you're ready," founders risk wasting time and capital on the wrong solutions. • **False Promises.** Success with early adopters can be misleading and give founders unwarranted confidence to expand. • **Speed Traps.** Despite the pressure to "get big fast," hypergrowth can spell disaster for even the most promising ventures. • **Help Wanted.** Rapidly scaling startups need lots of capital and talent, but they can make mistakes that leave them suddenly in short supply of both. • **Cascading Miracles.** Silicon Valley exhorts entrepreneurs to dream big. But the bigger the vision, the more things that can go wrong. Drawing on fascinating stories of ventures that failed to fulfill their early promise—from a home-furnishings retailer to a concierge dog-walking service, from a dating app to the inventor of a sophisticated social robot, from a fashion brand to a startup deploying a vast network of charging stations for electric vehicles—Eisenmann offers frameworks for detecting when a venture is vulnerable to these patterns, along with a wealth of strategies and tactics for avoiding them. A must-read for founders at any stage of their entrepreneurial journey, *Why Startups Fail* is not merely a guide to preventing failure but also a roadmap charting the path to startup success.
