## Other Asko Category User Guide

A Buyer's and User's Guide to Astronomical Telescopes and Binoculars James Mullaney, 2013-10-10 Amateur astronomers of all skill levels are always contemplating their next telescope and this book points the way to the most suitable instruments. Similarly, those who are buying their first telescopes and these days not necessarily a low cost one will be able to compare and contrast different types and manufacturers. This exciting and revised new guide provides an extensive overview of binoculars and telescopes. It includes detailed up to date information on sources, selection and use of virtually every major type, brand and model on today's market, a truly invaluable treasure trove of information and helpful advice for all amateur astronomers. Originally written in 2006, much of the first edition is inevitably now out of date as equipment advances and manufacturers come and go. This second edition not only updates all the existing sections of *A Buyer's and User's Guide to Astronomical Telescopes and Binoculars* but adds two new ones: Astro imaging and Professional Amateur collaboration. Thanks to the rapid and amazing developments that have been made in digital cameras, not those specialist cool chip astronomical cameras, not even DSLRs, but regular general purpose vacation cameras, it is easily possible to image all sorts of astronomical objects and fields. Technical developments including the Internet have also made it possible for amateur astronomers to make a real contribution to science by working with professionals. Selecting the right device for a variety of purposes can be an overwhelming task in a market crowded with observing options, but this comprehensive guide clarifies the process. Anyone planning to purchase binoculars or telescopes for astronomy, whether as a first instrument or as an upgrade to the next level, will find this book a treasure trove of information and advice. It also supplies the reader with many useful hints and tips on using astronomical telescopes or binoculars to get the best possible results from your purchase.

**The Roots of Hinduism** Asko Parpola, 2015-07-15 Hinduism has two major roots. The more familiar is the religion brought to South Asia in the second millennium BCE by speakers of Aryan or Indo-Iranian languages, a branch of the Indo-European language family. Another, more enigmatic root is the Indus civilization of the third millennium BCE, which left behind exquisitely carved seals and thousands of short inscriptions in a long forgotten pictographic script. Discovered in the valley of the Indus River in the early 1920s, the Indus civilization had a population estimated at one million people in more than 1000 settlements, several of which were cities of some 50,000 inhabitants. With an area of nearly a million square kilometers, the Indus civilization was more extensive than the contemporaneous urban cultures of Mesopotamia and Egypt. Yet after almost a century of excavation and research, the Indus civilization remains little understood. How might we decipher the Indus inscriptions? What language did the Indus people speak? What deities did they worship? Asko Parpola has spent fifty years researching the roots of Hinduism to answer these fundamental questions, which have been debated with increasing animosity since the rise of Hindu nationalist politics in the 1980s. In this pioneering book, he traces the archaeological route

of the Indo Iranian languages from the Aryan homeland north of the Black Sea to Central West and South Asia His new ideas on the formation of the Vedic literature and rites and the great Hindu epics hinge on the profound impact that the invention of the horse drawn chariot had on Indo Aryan religion Parpola s comprehensive assessment of the Indus language and religion is based on all available textual linguistic and archaeological evidence including West Asian sources and the Indus script The results affirm cultural and religious continuity to the present day and among many other things shed new light on the prehistory of the key Hindu goddess Durga and her Tantric cult **Moody's International Manual** ,2000

**Probation Violations in North Carolina** James M. Markham,2018 There are over 80 000 people on probation in North Carolina This book sets out the law and procedure of how probation officers and the court system respond to violations of probation with a focus on the courts limited authority to revoke probation after the Justice Reinvestment Act of 2011

Argument marking morphological partitives have been the topic of language specific studies while no cross linguistic or typological analyses have been conducted Since individual partitives of different languages have been studied there exists a basis for a more cross linguistic approach The purpose of this book is to fill the gap and to bring together research on partitives in different languages **PRO 14: International RILEM/CIB/ISO Symposium on**

**Integrated Life Cycle Design of Materials and Structures (ILCDES 2000)** Asko Sarja,2000 Design Computing and Cognition '06 Asko Riitahuhta,2007-05-16 This is the second volume of the new conference series Design Computing and Cognition DCC successor to the successful series Artificial Intelligence in Design AID The conference theme of design computing and cognition recognizes not only the essential relationship between human cognitive processes as models of

computation but also how models of computation inspire conceptual realizations of human cognition Intelligent Help Systems for UNIX Stephen J. Hegner, Paul Mc Kevitt, Peter Norvig, Robert L. Wilensky, 2012-12-06 In this international collection of papers there is a wealth of knowledge on artificial intelligence AI and cognitive science CS techniques applied to the problem of providing help systems mainly for the UNIX operating system The research described here involves the representation of technical computer concepts but also the representation of how users conceptualise such concepts The collection looks at computational models and systems such as UC Yucca and OSCON programmed in languages such as Lisp Prolog OPS 5 and C which have been developed to provide UNIX help These systems range from being menu based to ones with natural language interfaces some providing active help intervening when they believe the user to have misconceptions and some based on empirical studies of what users actually do while using UNIX Further papers investigate planning and knowledge representation where the focus is on discovering what the user wants to do and figuring out a way to do it as well as representing the knowledge needed to do so There is a significant focus on natural language dialogue where consultation systems can become active incorporating user modelling natural language generation and plan recognition modelling metaphors and users mistaken beliefs Much can be learned from seeing how AI and CS techniques can be investigated in depth while being applied to a real test bed domain such as help on UNIX **Artificial Intelligence in Design '00** Asko Riihahuhta, 2000-05-31 Designing is one of the foundations for change in our society It is a fundamental precursor to manufacturing fabrication and construction Design research aims to develop an understanding of designing and to produce models of designing that can be used to aid designing The papers in this volume are from the Sixth International Conference on Artificial Intelligence in Design AID '00 held in June 2000 in Worcester Massachusetts USA They represent the state of the art and the cutting edge of research and development in this field and demonstrate both the depth and breadth of the artificial intelligence paradigm in design They point the way for the development of advanced computer based tools to aid designers and describe advances in both theory and application This volume will be of particular interest to researchers developers and users of advanced computer systems in design Approaches to Teaching Pound's Poetry and Prose Demetres P. Tryphonopoulos, Ira B. Nadel, 2021-04-05 Known for his maxim Make it new Ezra Pound played a principal role in shaping the modernist movement as a poet translator and literary critic His works with their complex structures and layered allusions remain widely taught Yet his known fascism anti-Semitism and misogyny raise issues about dangerous ideologies that influenced his work and that must be addressed in the classroom The first section Materials catalogs the print and digital editions of Pound's works evaluates numerous secondary sources and provides a history of Pound's critical contexts The essays in the second section Approaches offer strategies for guiding students toward a clearer understanding of Pound's difficult works and the context in which they were written *Artificial Intelligence in Design '02* Asko Riihahuhta, 2013-04-17 One of the foundations for change in our society comes from designing Its genesis is the notion that the world around us

either is unsuited to our needs or can be improved The need for designing is driven by a society's view that it can improve or add value to human existence well beyond simple subsistence As a consequence of designing the world which we inhabit is increasingly a designed rather than a naturally occurring one In that sense it is an artificial world Designing is a fundamental precursor to manufacturing fabrication construction or implementation Design research aims to develop an understanding of designing and to produce models of designing that can be used to aid designing Artificial intelligence has provided an environmental paradigm within which design research based on computational constructions can be carried out Design research can be carried out in variety of ways It can be viewed as largely an empirical endeavour in which experiments are designed and executed in order to test some hypothesis about some design phenomenon or design behaviour This is the approach adopted in cognitive science It often manifests itself through the use of protocol studies of designers The results of such research form the basis of a computational model A second view is that design research can be carried out by positing axioms and then deriving consequences from them
