The World Map, 1300-1492 Evelyn Edson, 2007-05-30 In the two centuries before Columbus mapmaking was transformed The World Map 1300 1492 investigates this important transitional period of mapmaking Beginning with a 1436 atlas of ten maps produced by Venetian Andrea Bianco Evelyn Edson uses maps of the fourteenth and fifteenth centuries to examine how the discoveries of missionaries and merchants affected the content and configuration of world maps She finds that both the makers and users of maps struggled with changes brought about by technological innovation the compass quadrant and astrolabe rediscovery of classical mapmaking approaches and increased travel To reconcile the tensions between the conservative and progressive worldviews mapmakers used a careful blend of the old and the new to depict a world that was changing and growing before their eyes This engaging and informative study reveals how the ingenuity creativity and adaptability of these craftsmen helped pave the way for an age of discovery [A Magical Muddle](#) Twinkl Originals, 2019-10-31 Tabitha is worried about a special visitor coming to her school She wanted to impress the Head Witch but sometimes her spells went wrong When Tabitha comes up with a brainy idea will she dazzle or disappoint Find out in this fun story about magic and friendship Download the full eBook and explore supporting teaching materials at www.twinkl.com originals Join Twinkl Book Club to receive printed story books every half term at www.twinkl.co.uk/book-club UK only

Ready-to-go Super Book of Outline Maps Scholastic, Inc. Staff, 2000 101 Reproducible outline maps of the continents countries of the world the 50 states and more [An Eleventh-Century Egyptian Guide to the Universe](#), 2013-10-28 Acquired by the Bodleian Library in 2002 the Book of Curiosities is now recognized as one of the most important discoveries in the history of cartography in recent decades This eleventh century Arabic treatise composed in Egypt under the Fatimid caliphs is a detailed account of the heavens and the Earth illustrated by an unparalleled series of maps and astronomical diagrams With topics ranging from comets to the island of Sicily from lunar mansions to the sources of the Nile it represents the extent of geographical astronomical and astrological knowledge of the time This authoritative edition and translation accompanied by a colour facsimile reproduction opens a unique window onto the worldview of medieval Islam An extensive glossary of star names and seven indices on birds animals and other items have been added for easy reference **Open World Empire** Christopher B. Patterson, 2020-04-14 Finalist 2021 John Hope Franklin Prize given by the American Studies Association Seeking ways to understand video games beyond their imperial logics Patterson turns to erotics to re invigorate the potential passions and pleasures of play Video games vastly outpace all other mediums of entertainment in revenue and in global reach On the surface games do not appear ideological nor are they categorized as national products Instead they seem to reflect the open and uncontaminated reputation of information technology Video games are undeniably imperial products Their very existence has been conditioned upon the spread of militarized technology the exploitation of already existing labor and racial

hierarchies in their manufacture and the utopian promises of digital technology Like literature and film before it video games have become the main artistic expression of empire today the open world empire formed through the routes of information technology and the violences of drone combat unending war and overseas massacres that occur with little scandal or protest Though often presented as purely technological feats video games are also artistic projects and as such they allow us an understanding of how war and imperial violence proceed under signs of openness transparency and digital utopia But the video game as Christopher B Patterson argues is also an inherently Asian commodity its hardware is assembled in Asia its most talented e sports players are of Asian origin Nintendo Sony and Sega have defined and dominated the genre Games draw on established discourses of Asia to provide an Asiatic space a playful sphere of racial otherness that straddles notions of the queer the exotic the bizarre and the erotic Thinking through games like Overwatch Call of Duty 4 Modern Warfare Shenmue II and Alien Isolation Patterson reads against empire by playing games erotically as players do seeing games as Asiatic playthings that afford new passions pleasures desires and attachments **Amerasia** Elizabeth

Horodowich, Alexander Nagel, 2023-09-05 A connected world as imagined by early modern European artists mapmakers and writers where Asia and the Americas were on a continuum America and Asia mingled in the geographical and cultural imagination of Europe for well over a century after 1492 Through an array of texts maps objects and images produced between 1492 and 1700 this compelling and revelatory study immerses the reader in a vision of a world where Mexico really was India North America was an extension of China and South America was marked by a variety of biblical and Asian sites It asks further What does it mean that the Amerasian worldview predominated at a time when Europe itself was coming into cultural self definition Each of the chapters focuses on a particular artifact map image or book that illuminates aspects of Amerasia from specific European cultural milieus Amerasia shows how it was possible to inhabit a world where America and Asia were connected either imaginatively when viewed from afar or in reality when traveling through the newly encountered lands Readers will learn why early modern maps regularly label Mexico as India why the Amazonas region was named after a race of Asian female warriors and why artifacts and manuscripts that we now identify as Indian and Chinese are entangled in European collections with what we now label Americana Elizabeth Horodowich and Alexander Nagel pose a dynamic model of the world and of Europe's place in it that was eclipsed by the rise of Eurocentric colonialist narratives in the nineteenth and twentieth centuries To rediscover this history is an essential part of coming to terms with the emergent polyfocal global reality of our own time Henricus Martellus's World Map at Yale (c. 1491) Chet Van Duzer, 2018-08-03 This book presents groundbreaking new research on a fifteenth century world map by Henricus Martellus c 1491 now at Yale The importance of the map had long been suspected but it was essentially unstudyable because the texts on it had faded to illegibility

Multispectral imaging of the map performed with NEH support in 2014 rendered its texts legible for the first time leading to renewed study of the map by the author This volume provides transcriptions translations and commentary on the Latin texts

on the map particularly their sources as well as the place names in several regions This leads to a demonstration of a very close relationship between the Martellus map and Martin Waldseemüller's famous map of 1507 One of the most exciting discoveries on the map is in the hinterlands of southern Africa The information there comes from African sources the map is thus a unique and supremely important document regarding African cartography in the fifteenth century This book is essential reading for digital humanitarians and historians of cartography

Worldly Consumers Genevieve Carlton, 2015-06-22 Though the practical value of maps during the sixteenth century is well documented their personal and cultural importance has been relatively underexamined In *Worldly Consumers* Genevieve Carlton explores the growing availability of maps to private consumers during the Italian Renaissance and shows how map acquisition and display became central tools for constructing personal identity and impressing one's peers Drawing on a variety of sixteenth century sources including household inventories epigrams dedications catalogs travel books and advice manuals *Worldly Consumers* studies how individuals displayed different maps in their homes as deliberate acts of self fashioning One citizen decorated with maps of Bruges Holland Flanders and Amsterdam to remind visitors of his military prowess for example while another hung maps of cities where his ancestors fought or governed in homage to his auspicious family history Renaissance Italians turned domestic spaces into a microcosm of larger geographical places to craft cosmopolitan erudite identities for themselves creating a new class of consumers who drew cultural capital from maps of the time

Words and the Mind Barbara Malt, Phillip Wolff, 2010-03 The study of word meanings promises important insights into the nature of the human mind by revealing what people find to be most cognitively significant in their experience However as we learn more about the semantics of various languages we are faced with an interesting problem Different languages seem to be telling us different stories about the mind For example important distinctions made in one language are not necessarily made in others What are we to make of these cross linguistic differences How do they arise Are they created by purely linguistic processes operating over the course of language evolution Or do they reflect fundamental differences in thought In this sea of differences are there any semantic universals Which categories might be given by the genes which by culture and which by language And what might the cross linguistic

similarities and differences contribute to our understanding of conceptual and linguistic development. The kinds of mapping principles, structures, and processes that link language and non-linguistic knowledge must accommodate not just one language but the rich diversity that has been uncovered. The integration of knowledge and methodologies necessary for real progress in answering these questions has happened only recently as experimental approaches have been applied to the cross-linguistic study of word meaning. In *Words and the Mind*, Barbara Malt and Phillip Wolff present evidence from the leading researchers who are carrying out this empirical work on topics as diverse as spatial relations, events, emotion, terms, motion, events, objects, body part terms, causation, color categories, and relational categories. By bringing them together, Malt and Wolff highlight some of the most exciting cross-linguistic and cross-cultural work on the language-thought interface from a broad array of fields including linguistics, anthropology, cognitive and developmental psychology, and cognitive neuropsychology. Their results provide some answers to these questions and new perspectives on the issues surrounding them.

Stitching the World: Embroidered Maps and Women's Geographical Education Judith A. Tyner, 2016-12-05. From the late eighteenth century until about 1840, schoolgirls in the British Isles and the United States created embroidered map samplers and even silk globes. Hundreds of British maps were made, and although American examples are more rare, they form a significant collection of artefacts. Descriptions of these samplers stated that they were designed to teach needlework and geography. The focus of this book is not on stitches and techniques used in drafting the maps but rather why they were developed, how they diffused from the British Isles to the United States, and why they were made for such a brief time. The events of the late eighteenth and early nineteenth centuries stimulated an explosion of interest in geography. The American and French Revolutions, the wars between France and England, the War of 1812, Captain Cook's voyages, and the explorations of Lewis and Clark made the study of places exciting and important. Geography was the first science taught to girls in school. This period also coincided with major changes in educational theories and practices, especially for girls, and this book uses needlework maps and globes to chart a broader discussion of women's geographic education. In this light, map samplers and embroidered globes represent a transition in women's education from accomplishments in the eighteenth century to challenging geographic education and conventional map drawing in schools and academies of the second half of the nineteenth century. There has been little serious study of these maps by cartographers, and moreover, historians of cartography have largely neglected the role of women in mapping. Children's maps have not been studied, although they might have much to offer about geographical teaching and perceptions of a period, and map samplers have been dismissed because they are the work of schoolgirls. Needlework

historians likewise have not done in depth studies of map samplers until recently *Stitching the World* is an interdisciplinary work drawing on cartography needlework and material culture This book for the first time provides a critical analysis of these artefacts showing that they offer significant insights into both eighteenth and nineteenth century geographic thought and cartography in the USA and the UK and into the development of female education [Englises in a Globalized World: Exploring Contact Effects on Other Languages](#) Alexander Onysko, Peter Siemund, 2022-11-03
