Annual Report Sep 14 2023 1913 has appendix: List of lands in the forest preserve. January 1, 1914.

Water Resources Data for Texas Dec 05 2022 CONTENTS: v. 1. Arkansas River Basin, Red River Basin, Sabine River Basin, Neches River Basin, Trinity River Basin, and intervening coastal basins -- v. 2. San Jacinto River Basin, Brazos River Basin, San Bernard River Basin and intervening coastal basins -- v. 3. Colorado River Basin, Lavaca River Basin, Guadalupe River Basin, Nueces River Basin, Rio Grande Basin, and intervening coastal basins.

Reserve Bank of India Bulletin Mar 08 2023

The Mesoscopic Theory of Polymer Dynamics May 30 2022 Our brutal century of atom bombs and spaceships can also be called the century of polymers. In any case, the broad spreading of synthetic polymer materials is one of the signs of our time. A look at the various aspects of our life is enough to convince us that polymeric materials (textiles, plastics, rubbers) are as widely spread and important in our life as are other materials (metals and non-metals) derived from small molecules. Polymers have entered the life of the twentieth century as irreplaceable construction materials. Polymers differ from other substances by the size of their molecules which, appropriately enough, are referred to as macromolecules, since they consist of thousands or tens of thousands of atoms (molecular weight up to 10^6 or more) and have a macroscopic rectilinear length (upto 10 cm). The atoms of a macromolecule are firmly held together by valence bonds, forming a single entity. In polymeric substances, the weaker van der Waals forces have an effect on the components of the macromolecules which form the system. The structure of polymeric systems is more complicated than that of low-molecular solids or liquids, but there are some common features: the atoms within a given macromolecule are ordered, but the centres of mass of the individual macromolecules and parts of them are distributed randomly. Remarkably, the mechanical response of polymeric systems combines the elasticity of a solid with the fluidity of a liquid.
