Protists

1. Fill in the following:

1. Animal-like protists are also called: **Protozoans**

a. What are two examples of animal-like protists:

- I. **Amoeba, Euglena, Stentor,**
- II. **Paramecium, Trypanosoma, Volvella**

b. How do they get energy/food? **Heterotrophic (Consume other organisms)**

c. Animal-like protists are (circle choice): **Single-celled** Multicellular

d. Label the following protozoans with the structure they use to move:

e. List the two common diseases protozoans cause: **Malaria (Plasmodium), Sleeping sickness (Trypanosoma), & Intestinal disease (Giardia)**

f. How are these diseases passed to humans? **By vectors: Mosquitoes & Tsetse fly.**

2. Plant-like protists

a. How do they get energy/food? **Autotrophs (Photosynthesis)**

b. Plant-like protists can be (circle choice): **Single-celled** **Multi-cellular** **Live in Colonies**

c. What three characteristics of plants do they lack:

- I. **Stems**
- II. **Leaves**
- III. **Roots**

3. Fungus-like protists

a. How do they get energy/food? **Heterotrophic decomposers (absorb dead organic matter)**

b. Fungus-like protists are (circle choice): **Single-celled** **Multicellular**

c. Why were fungus-like protists moved out of kingdom fungi? **Fungus-like protists were moved out of kingdom fungi because they can move during part of their life cycle.**

d. What was the cause of the Great Potato Famine in Ireland? **Water molds which are a fungus like protist.**

Section Review 27 3 Protists Answer Key

Soil Protists Stefan Geisen,2015-10-13 Protists are by far the most diverse and abundant eukaryotes in soils Nevertheless very little is known about individual representatives the diversity and community composition and ecological functioning of these important organisms For instance soil protists are commonly lumped into a single functional unit i e bacterivores This work tackles missing knowledge gaps on soil protists and common misconceptions using multi methodological approaches including cultivation microcosm experiments and environmental sequencing In a first part several new species and genera of amoeboid protists are described showing their immense unknown diversity In the second part the enormous complexity of soil protists communities is highlighted using cultivation and sequence based approaches In the third part the presence of diverse mycophagous and nematophagous protists are shown in functional studies on cultivated taxa and their environmental importance supported by sequence based approaches This work is just a start for a promising future of soil Protistology that is likely to find other important roles of these diverse organisms *Protists and Fungi* Gareth Editorial Staff,2003-07-03 Explores the appearance characteristics and behavior of protists and fungi lifeforms which are neither plants nor animals using specific examples such as algae mold and mushrooms Concepts of Biology Samantha Fowler,Rebecca Roush,James Wise,2023-05-12 Black white print Concepts of Biology is designed for the typical introductory biology course for nonmajors covering standard scope and sequence requirements The text includes interesting applications and conveys the major themes of biology with content that is meaningful and easy to understand The book is designed to demonstrate biology concepts and to promote scientific literacy Biolog ,1998 **What Are Protists?** Kate Mikoley,2019-12-15 When people think of life forms they often think of animals and plants Not all organisms fit into these two groups Protists are a hugely diverse group of organisms They are usually tiny and made up of just a single cell This valuable resource features colorful photographs that correlate very closely to details of the narrative encouraging readers to develop a deeper understanding of the book s material as well as key concepts related to elementary life science curricula Molecular Biology of the Cell ,2002 **Mitochondria and Anaerobic Energy Metabolism in Eukaryotes** William F. Martin,Aloysius G. M. Tielens,Marek Mentel,2020-12-07 Mitochondria are sometimes called the powerhouses of eukaryotic cells because mitochondria are the site of ATP synthesis in the cell ATP is the universal energy currency it provides the power that runs all other life processes Humans need oxygen to survive because of ATP synthesis in mitochondria The sugars from our diet are converted to carbon dioxide in mitochondria in a process that requires oxygen Just like a fire needs oxygen to burn our mitochondria need oxygen to make ATP From textbooks and popular literature one can easily get the impression that all mitochondria require oxygen But that is not the case There are many groups of organisms known that make ATP in mitochondria without the help of oxygen They have preserved biochemical relicts from the early evolution of eukaryotic cells

which took place during times in Earth history when there was hardly any oxygen available certainly not enough to breathe. How the anaerobic forms of mitochondria work in which organisms they occur and how the eukaryotic anaerobes that possess them fit into the larger picture of rising atmospheric oxygen during Earth history are the topic of this book.

Ecology of Protozoa Genoveva F. Esteban, Tom M. Fenchel, 2021-01-04 This book emphasises the important role that protozoa play in many natural ecosystems. To shed new light on their individual adaptive skills the respective chapters examine the ecology and functional biology of this diverse group of eukaryotic microbes. Protozoa are well established model organisms that exemplify many general problems in population ecology and community ecology as well as evolutionary biology. Their particular characteristics like large population sizes, life cycles and motile sensory behaviour have a profound impact on their survival, distribution and interaction with other species. Thus readers will also be introduced to protozoan habitats in a broad range of environments. Even though this group of unicellular organisms is highly diverse the authors focus on shared ecological patterns. Students and scientists working in the areas of eukaryotic microbiology and ecology will appreciate this updated and revised 2nd Edition as a valuable reference guide to the lifestyles of protozoa. **Janeway's Immunobiology** Kenneth Murphy, Paul Travers, Mark Walport, Peter Walter, 2010-06-22 The Janeway's Immunobiology CD ROM Immunobiology Interactive is included with each book and can be purchased separately. It contains animations and videos with voiceover narration as well as the figures from the text for presentation purposes. **The Rasputin Effect: When Commensals and Symbionts Become Parasitic** Christon J. Hurst, 2016-07-05 This volume focuses on those instances when benign and even beneficial relationships between microbes and their hosts opportunistically change and become detrimental toward the host. It examines the triggering events which can factor into these changes such as reduction in the host's capacity for mounting an effective defensive response due to nutritional deprivation, coinfections and seemingly subtle environmental influences like the amounts of sunlight, temperature and either water or air quality. The effects of environmental changes can be compounded when they necessitate a physical relocation of species in turn changing the probability of encounter between microbe and host. The change also can result when pathogens including virus species either have modified the opportunist or attacked the host's protective natural microflora. The authors discuss these opportunistic interactions and assess their outcomes in both aquatic as well as terrestrial ecosystems highlighting the impact on plant, invertebrate and vertebrate hosts. Conservation Biology for All Navjot S. Sodhi, Paul R. Ehrlich, 2010-01-08 Conservation Biology for All provides cutting edge but basic conservation science to a global readership A series of authoritative chapters have been written by the top names in conservation biology with the principal aim of disseminating cutting edge conservation knowledge as widely as possible Important topics such as balancing conservation and human needs climate change conservation planning designing and analyzing conservation research ecosystem services endangered species management extinctions fire habitat loss and invasive species are covered Numerous textboxes describing additional relevant material or case studies are also included The global biodiversity crisis is now unstoppable what can be saved in the developing world will require an educated constituency in both the developing and developed world Habitat loss is particularly acute in developing countries which is of special concern because it tends to be

these locations where the greatest species diversity and richest centres of endemism are to be found Sadly developing world conservation scientists have found it difficult to access an authoritative textbook which is particularly ironic since it is these countries where the potential benefits of knowledge application are greatest There is now an urgent need to educate the next generation of scientists in developing countries so that they are in a better position to protect their natural resources

Exploring Biology in the Laboratory: Core Concepts Murray P. Pendarvis, John L. Crawley, 2019-02-01 Exploring Biology in the Laboratory Core Concepts is a comprehensive manual appropriate for introductory biology lab courses This edition is designed for courses populated by nonmajors or for majors courses where abbreviated coverage is desired Based on the two semester version of Exploring Biology in the Laboratory 3e this Core Concepts edition features a streamlined set of clearly written activities with abbreviated coverage of the biodiversity of life These exercises emphasize the unity of all living things and the evolutionary forces that have resulted in and continue to act on the diversity that we see around us today

Review of Jellyfish Blooms in the Mediterranean and Black Sea Ferdinando Boero, 2013 It is clear that a new type of human approach to marine ecosystems is needed to confront phenomena such as jellyfish blooms This document provides an updated overview of this phenomenon in the Mediterranean and Black Sea and illustrates how the problem is affecting societies It reviews current knowledge on gelatinous plankton in the affected region providing a framework for its inclusion into fisheries science and the management of human activities such as tourism and coastal development Fact sheets on the most important gelatinous plankters of the Mediterranean and Black Seas are included as an appendix
