Life Intense Apr 09 2022 Our lives today are oppressed by the demand that we live, feel and experience with ever greater intensity. We are enticed to try exotic flavors and smells; urged to enjoy a wide range of sexual experiences; pushed to engage in extreme sports and recreational drugs - all in the pursuit of some new, unheard-of intensity. Tristan Garcia argues that such intensity rarely lives up to its promise. It always comes at a price: one that defines the ethical predicament of contemporary life. The notion of intensity was the hidden key to Garcia's landmark book Form and Object. In *The Life Intense*, the first part of his ambitious *Letting Be* trilogy, he begins to develop it in detail. This first book focuses on ethics; the forthcoming volumes will be devoted to politics and then metaphysics.

*Biology* Sep 02 2021 "I have been teaching nonmajors biology at the University of Oklahoma since 1997 and over that time have encountered many students who fear science in general and biology in particular. The complexity, abstractions, and unfamiliar terms can seem overwhelming at first, but with practice, I know that anyone can think like a scientist. Learning to think scientifically is important well beyond passing your biology class. After all, scientific issues confront you every day as you navigate your life and your social media accounts. How do you know if a claim about climate change is scientific? Will you be able to identify misinformation and interpret graphs during the next global health crisis? This book will teach you not only to understand the scientific terms you encounter but also to distinguish "good science" from unscientific claims. I've created the following features to help you make the transition from memorizing facts to understanding concepts—from accepting scientific claims to analyzing them for yourself. These tools will help you to pass your class and to be an informed citizen"--

*Life Reconstructed* Jan 19 2023 1 in 8 women will develop invasive breast cancer over the course of her lifetime, but this is not just another cancer book.

Breast cancer survivor Kim Harms combines her own experience with extensive research and walks readers through the process of mastectomy and breast reconstruction, weighing the pros and cons, detailing the physical and emotional costs, and laying out the questions cancer fighters need to ask to be their own best advocate. With a foreword by the medical director of Katzmann Breast Center and chapters on everything from the vulnerable feeling of exposing your breasts to “everyone” to the distinctions between reconstruction and augmentation (trust us, it’s not a boob job!), *Life Reconstructed* is the compassionate, honest roadmap every breast cancer fighter needs on her journey to recovery.

Life Feb 17 2023 Authoritative, thorough, and engaging, *Life: The Science of Biology* achieves an optimal balance of scholarship and teachability, never losing sight of either the science or the student. The first introductory text to present biological concepts through the research that revealed them, *Life* covers the full range of topics with an integrated experimental focus that flows naturally from the narrative. This approach helps to bring the drama of classic and cutting-edge research to the classroom - but always in the context of reinforcing core ideas and the innovative scientific thinking behind them. Students will experience biology not just as a litany of facts or a highlight reel of experiments, but as a rich, coherent discipline.

Loose Leaf for Essentials of Biology Oct 28 2023 *Essentials of Biology*, sixth edition is designed to provide students who are not majoring in science with a fundamental understanding of the science of biology. Even though these students are not scientists, an understanding of how science can help identify, analyze, and offer solutions to the many challenges facing human society is critical to our species’ health and survival.

Inquiry Into Life 16e Aug 02 2021 *Inquiry into Life* was originally developed to reach out to science-shy students. The text now represents one of the cornerstones of introductory biology education and was founded on the belief that teaching science from a human perspective, coupled with human applications, makes the material more relevant to the student. As scientists and educators, the authors are aware that scientific discovery is a dynamic process and the advances in digital publishing are allowing authors to update content on a regular basis.

**The Secret** Nov 04 2021 The tenth-anniversary edition of the book that changed lives in profound ways, now with a new foreword and afterword. *My Story 1* Nov 16 2022 Just what exactly is social studies, you may ask? Well, it includes the study of all kinds of people and places, some far away and some next door. In this book we talk about families, like your family in your house, and also lots of people close by, which we call a town or city, and finally about even more people in cities or outside of cities, all living in big places called countries. *My Story and the World Around Me* is a course for lower elementary students. It includes basic introductions to history, politics, sociology, economics, and geography, and provides a fuller understanding of God’s world and the cultures of the countries. This is a daily adventure-based curriculum series that encourages families to explore the world together through four nine-week quests and to understand it better from God’s perspective. It is designed with elements that make weekly learning fun and interactive, including: Activity time Word find time Review time My story journal Learn all about the world while you discover more about your own. And make sure you pull out your Quest

Collector Cards at the beginning of each quest. Your world map on the other side shows where you are in each lesson!

**Inside the Robe** Aug 14 2022 To most people, judges are mysterious creatures. As Anthony Bourdain invited readers to follow him behind the scenes of the restaurant business in his bestseller, *Kitchen Confidential*, and Caitlin Doughty's *Smoke Gets in Your Eyes* was a revealing peak into the mysteries of what happens after death inside a mortuary, *Inside the Robe* shines a bright spotlight into the hidden folds of the judging world. Despite the old saw that judges should merely "follow the law," *Inside the Robe* lays bare how following the law can produce wildly different results depending upon the background, politics, and life experiences of each judge. Even the floor of the courthouse can mean the difference between prison and freedom. Judge Katharine Mader spent decades as a judge in a criminal court, was the LAPD's first inspector general, a prosecutor in two murder-for-hire trials, and a defense attorney who successfully argued to spare the life of the Hillside Strangler. From her perch behind the bench, Judge Mader witnesses a parade of drug addicts, gang members, mentally ill defendants, pricey private attorneys ranging from brilliant to incompetent, jaded prosecutors, and starry-eyed true believer public defenders. Never before has the judging profession been laid bare for all to see.

**Concepts of Biology** Dec 30 2023 *Concepts of Biology* is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, *Concepts of Biology* is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of *Concepts of Biology* is that instructors can customize the book, adapting it to the approach that works best in their classroom. *Concepts of Biology* also includes an innovative art program that incorporates critical

thinking and clicker questions to help students understand--and apply--key concepts.

Concepts of Biology Jun 23 2023 Instructors consistently ask for a textbook that helps students understand the relationships between the main concepts of biology, so they are not learning facts about biology in isolation. Mader's Concepts of Biology was developed to fill this void. Organized around the main themes of biology, Concepts of Biology guides students to think conceptually about biology and the world around them. Just as the levels of biological organization flow from one level to the next, themes and topics in Concepts of Biology are tied to one another throughout the chapter, and between the chapters and parts. Combined with Dr. Mader's hallmark writing style, exceptional art program, and pedagogical framework, difficult concepts become easier to understand and visualize, allowing students to focus on understanding how the concepts are related.

Mothers, Sex, And Sexuality May 11 2022 Mothers, Sex, and Sexuality talks about things not normally dared spoken out loud—the interconnectedness and conflict between our parental and sexual selves, the taboo of the sexual mother, and why it matters so much to shatter it. What is it about the sexual mother that is incompatible, and at times even disturbing? Why are we threatened by maternal sexuality? And what does this tell us about the structures of gender and power that govern our bodies? Mothers, Sex, and Sexuality presents a rigorous academic analysis of the myriad ways in which the sexual/maternal divide affects women, birthing people, and those of us who assume or are ascribed the title "mother". We examine the way we as mothers talk to our daughters about sex, the way we talk about sex in a cultural context, and the deafening silence around sex in a medical system that overlooks maternal sexuality. We return repeatedly to the impact of both Christianity and Hinduism on the mother as someone to be revered but tightly controlled. We embrace the lost eroticism of mothering and hail breastfeeding as a sexual maternal practice, arguing for a new, broader, feminist understanding of sexuality. We discuss the way fat mothers

destabilise the heteronormative maternal model, the way kinky queers are reconfiguring the sexual/maternal divide through erotic role-play, and we explore the strange, intense, and romantic domestic relationship that springs up between mothers and nannies—two heterosexual women trapped together in a homoerotic triangulation of need and desire. In a titillating climax we revel in the sexual maternal as embodied through performance art, poetry, installations, and comedy, disrupting queer readings of bodies as we are invited to both fuck, and fuck with, the maternal. This book boldly provides both a challenge to the patriarchal constraints of motherhood and a racy road-map escape route out of the sexual-maternal dichotomy.
