Focusing on the legal implications in the US, this book is designed to meet the needs of professional and student nurses in determining how they should be recording their practice. With all the training and education nurses receive, there is little true explanation about the importance of documentation. Even in today's litigious culture and the backlash of services no longer reimbursable -- it is crucial we as nurses understand the rationale for our documentation practices. By creating specific systems to ensure license protection, we in turn provide more effective hand-off communication. Every nurse knows it's the law and that you don't want to lose your license, but do we really know why the methods of documentation are so vital to our livelihood? Has the electronic medical record made this approach additionally arduous? Do the questions on the EMR provide an accurate picture of the actual care provided? Often times, these reports are not clear or complete. Through fictional and non-fictional stories, Rosale Lobo reveals proper nursing documentation techniques providing clarity and important best practice concepts that can be applied immediately. Extraneous situations will arise in nursing, making it imperative to develop intentional methods of documentation. By putting together an effective system you will decrease your chances of being sued. For the future of nursing documentation, the EMR is not the answer, a personal system of accountability is. Written specifically for staff nurses, this easy-to-read and affordable resource helps nurses understand the value of good documentation, and the consequences of not documenting accurately and in a timely fashion. The handbook's case studies illustrate the legal threat nurses face from improper documentation, while the quick tips help them avoid common charting errors and improve their charting skills. Sold in packs of

25, the handbook includes a short post-test and certificate of completion, allowing nurses to evaluate their documentation understanding. Feeling unsure about documenting patient care? Having worked in a variety of inpatient and outpatient settings, I understand the obstacles nurses face. There's just not time, nor do nurses have the mental energy to meticulously document every little thing on top of the rest of their to-do list. That's part of why I became passionate about documentation education. It doesn't have to be an overwhelming, endless challenge to chart exhaustively in hopes that you enter enough data into the chart to defend yourself one day. Rather, leveraging the most critical data, knowing how to format notes and exactly what to say, and when to spend five minutes dumping information into the chart can be learned skills that make documentation faster, easier, and less stressful, while doing a better job of defending your actions. Designated a Doody's Core Title! The Preeminent Nursing Terminology Classification System "The Clinical Care Classification (CCC) System described in this manual is the only standard coded nursing terminology that is based on sound research using the nursing process model framework and that meets the Patient Medical Record Information (PMRI) comparability requirement. The CCC System allows patient care data generated by nurses to be incorporated into the PMRI database, and enables nurses' contributions to patient outcomes to be studied and acknowledged." -- From the Foreword by Sheryl L. Taylor, BSN, RN, Senior Consultant, Farrell Associates TESTIMONIES: "ABC Coding Solutions-Alternative Link developed ABC codes for nursing in collaboration with Dr. Virginia Saba, developer of the CCC system. Approximately two hundred ABC codes were

developed from the CCC System of Nursing Interventions to accurately document nursing and integrative health care processes, classify and track clinical care, and develop evidence-based practice models, thus filling significant gaps in older medical code sets." --Connie Koshewa, Practitioner Relations Director, ABC Coding Solutions-Alternative Link "The International Classification for Nursing Practice (ICNPÆ) is a program of the International Council of Nurses (ICN). One of the first steps in the development of the ICNPÆ was to collect and compare all the nursing concepts in existing nursing terminologies, including the CCC. To facilitate the goal of ICNPÆ as a unified nursing language system, a project is under way to map the CCC to the ICNPÆ Version 1.0. This work will facilitate evaluation and ongoing development of both terminologies and allow ICN to compare data using CCC codes with data from other standard nursing terminologies." --Amy Coenen, PhD, RN, FAAN, Director, ICNPÆ Program, International Council of Nurses
