Today's marketplace is fueled by knowledge. Yet organizing systematically to leverage knowledge remains a challenge. Leading companies have discovered that technology is not enough, and that cultivating communities of practice is the keystone of an effective knowledge strategy. Communities of practice come together around common interests and expertise- whether they consist of first-line managers or customer service representatives, neurosurgeons or software programmers, city managers or home-improvement amateurs. They create, share, and apply knowledge within and across the boundaries of teams, business units, and even entire companies-providing a concrete path toward creating a true knowledge organization. In Cultivating Communities of Practice, Etienne Wenger, Richard McDermott, and William M. Snyder argue that while communities form naturally, organizations need to become more proactive and systematic about developing and integrating them into their strategy. This book provides practical models and methods for stewarding these communities to reach their full potential-without squelching the inner drive that makes them so valuable. Through in-depth cases from firms such as DaimlerChrysler, McKinsey & Company, Shell, and the World Bank, the authors demonstrate how communities of practice can be leveraged to drive overall company strategy, generate new business opportunities, tie personal development to corporate goals, transfer best practices, and recruit and retain top talent. They define the unique features of these communities and outline principles for nurturing their essential elements. They provide guidelines to support communities of practice through their major stages of development, address the potential downsides of communities, and discuss the specific challenges of distributed communities. And they show how to recognize the value created by communities of practice and how to build a corporate knowledge strategy around them. Essential reading for any leader in today's knowledge economy, this is the definitive guide to developing communities of practice for the benefit-and long-term success-of organizations and the individuals who work in them. Etienne Wenger is a renowned expert and consultant on knowledge management and communities of practice in San Juan, California. Richard McDermott is a leading expert of organization and community development in Boulder, Colorado. William M. Snyder is a founding partner of Social Capital Group, in Cambridge, Massachusetts. How many of us have found ourselves hampered in our work and at home because we can't take a balanced view. If this is you then you're probably a lop-sided left or right brain person. This imbalance shows in other ways too: some of us suffer social embarrassment because of poor muscular co-ordination. Some even fall asleep at inconvenient times! Increasingly too we demand more of our students and sports people who need to operate to their optimum potential. To be an active learner and a whole person, why not try Educational Kinesiology, a method of integrating left and right brain processes? Put simply, the techniques in Switch on Your Brain will improve your left and right brain co-ordination. The exciting thing is that you can see results quickly - in some cases, immediately. The tests and

exercises can be done at home. Easy to use, they are safe for all to try. By increasing our capacity to learn, we can all improve our performance and enhance our self-esteem. Switch on Your Brain has helped many people change their lives, especially those with obvious learning difficulties, and the efficacy of this approach has been proved over many years. This guide was developed to assist students, professors, executives of local criminal justice systems, and appointed and elected officials of general government to have a better understanding on how the criminal justice system should function. It may also be of special interest to citizens and public officials who sense that more collaboration and coordination is needed to enhance criminal justice decision making which, in turn, will have a positive impact on local criminal justice systems. Leslie J. Smith advocates that the performance of the criminal justice system should be measured in terms of achieving the goals and objectives of each component collectively. Although the legislative, judicial, and executive branches of the U.S. government are constitutionally independent and not required to engage in any coordinated planning activities, these requirements should not lead to poor performance. It is essential to promote positive government through increased collaboration by identifying philosophical principles that will promote the participation of citizens, law enforcement, judiciary, prosecution, corrections, victims, treatment providers, and educators in the development of strategies to prevent, reduce and control crime. There are approximately twenty states throughout the United States that have fostered criminal justice collaborations of this type. The key to accomplishing this objective is effective leadership. This approach is growing in popularity and this book will assist in the further development of this strategy. This guide provides a step-by-step strategy that simplifies the aforementioned issues. It will be especially advantageous for newly appointed criminal coordinators, planners, and others that are charged with creating a hands-on approach to coordinating their local criminal justice processes. Above all, as criminal justice presses forward to the future, the guide will assist in "bridging the gap" between traditional and contemporary approaches to criminal justice.
