Engineering Economics Analysis for Evaluation of Alternatives Ira H. Kleinfeld, 1993-01-12

The engineer's guide to economical decision making. Engineering economics is an important subject for both aspiring and practicing engineers. As global competition increases, engineers are increasingly asked to analyze and monitor their processes and products not only to ascertain their level of quality but their cost effectiveness as well. It is imperative to know the scientific and engineering principles of design work and decision making in a world where technology is constantly evolving.

Kleinfeld's *Engineering Economics Analysis for Evaluation of Alternatives* offers students, professors, and professionals guidance for making smart economical decisions when it comes to design and manufacturing.

Fundamentals of Engineering Economics and Decision Analysis David Whitman, Ronald Terry, 2022-06-01

The authors cover two general topics: basic engineering economics and risk analysis. In this text, within the topic of engineering economics, are discussions on the time value of money and interest relationships. These interest relationships are used to define certain project criteria that are used by engineers and project managers to select the best economic choice among several alternatives. Projects examined will include both income and service producing investments. The effects of escalation, inflation, and taxes on the economic analysis of alternatives are discussed. Risk analysis incorporates the concepts of probability and statistics in the evaluation of alternatives. This allows management to determine the probability of success or failure of the project. Two types of sensitivity analyses are presented. The first is referred to as the range approach, while the second uses probabilistic concepts to determine a measure of the risk involved. The authors have designed the text to assist individuals to prepare to successfully complete the economics portions of the Fundamentals of Engineering Exam.

Table of Contents: Introduction, Interest and the Time Value of Money, Project Evaluation Methods, Service Producing Investments, Income Producing Investments, Determination of Project Cash Flow, Financial Leverage, Basic Statistics and Probability, Sensitivity Analysis.
