**Vedic Mathematics for All Ages** Vandana Singhal,2007 The author has attempted to codify several useful results embedded in the ancient lore in a form which is easily accessible to the children learning mathematics Many of the chapters deal with computations using simple techniques which will shorten the effort involved in the conventional approach The price one pays of course is that one has to learn the tricks memorize them and use the appropriate one for each problem While one might think that this takes away the generality of

the modern approach it certainly has the element of charm and intrigue which children and grown ups will find entertaining Even working out why many of these approaches lead to correct results is a valuable exercise by itself Contents Foreword Preface Feedback Introduction 1 Complement Subtraction Multiplication by Specific Numbers Base Multiplication Working Base Multiplication Multiplication Algebra Digital Roots Divisibility Division I Division II Squares Straight Squaring Cubes Square roots of exact squares Cube roots of exact cubes Straight Division Square roots II Sutras Glossary Index **How to Become a Human Calculator** Aditi Singhal, Useful for School students teachers and professionals and a must for those appearing for competitive exams like UPSC MBA MCA GMAT GRE CSAT etc After reading this book solving 5378942639 8120594263 finding the square of 99975 the cube root of 704969 or calculating any day from 500 years would be child s play

**Mental Math** Abhishek VR, 2019-05-19 Discover the Mental Math Secrets to Become a Human Calculator Schools taught you a way to do math that works when you have a pen paper But the same methods takes a lot of effort when you have to do math in your head This is because it uses a lot of your working memory the short term memory used to complete a mental task For example try to mentally multiply  $73\ 201 \times 3$  It might take only a few seconds to multiply the individual digits But if you multiply right to left the way you learnt in school you will rely on your working memory You will use it to recall every single digit you calculate to put it back together and get your final answer You may even find yourself calculating some digits again because you forgot one of the numbers The difficulty increases further when you have to multiply larger numbers like  $732 \times 323$  You will have to remember numbers across many steps Mental arithmetic would be a lot easier to do in your head if you didn t have to remember so many numbers In school you learnt to write the down numbers as you calculate to free up your working memory In mental math there are many other ways to do the same thing One of the tricks to free up your working memory is to calculate from left to right instead of right to left Try multiplying  $73\ 201 \times 3$  from left to right starting from  $7 \times 3$  and ending with  $1 \times 3$  You will find yourself calling out the answer before you even finish the whole problem You can use this trick to solve any math problem in the future But we have just scratched the surface There are many more tricks inside the book that make doing mental math as easy as reading a comic Here is a glimpse of what you will be able to master Mentally add large numbers Example Add 8739 5492 in your head in seconds Subtract numbers fast Example Mentally subtract 7520 4998 without writing anything down Multiplication tricks to multiply three digit numbers Example Multiply  $323 \times 123$  in your head Square large numbers in seconds Example Calculate  $64 \times 64$  faster than a calculator Mentally divide large numbers Example Divide 601324 by 73 entirely in your head Quickly check a calculation with 90% accuracy without re calculating Overcome math anxiety Cement your mental math skills with bonus weekly training This book only has the best techniques used by over 27 mental and Vedic math experts across the world The techniques in this book are so simple you will wonder why nobody taught you this before You will be able to master it even if you have failed math in school Imagine waking up tomorrow being able to do lightning fast math in your head Your family friends will look at you like you are some

kind of a genius Since you do the calculations in your head you will acquire better mental habits in the process So you will not just look like a genius You will actually be one Buy Now To Become A Human Calculator Every minute you wait to buy this book is another minute you don't see the benefit of being good with math numbers Put the power of mental math to work in your life so you can quickly easily make math and numbers more useful develop better memory habits increase concentration develop new ways to think and do speed math entirely in your head faster than a calculator Get your copy today A MUST BUY for students of Vedic Mathematics GMAT GRE SAT Case Study Interview and Case Interview

*Speed Mathematics Using the Vedic System* Vali Nasser, 2004 Speed Mathematics using the Vedic system facilitates Mathematics learning The average pupil will be able to work out calculations such as  $46 \times 44$ ,  $95 \times 95$  and  $116 \times 114$  mentally often faster than a calculator Paper and pencil will still be required for most questions but the speed and accuracy of calculations will improve significantly This book provides smart strategies for building a foundation in Number work and Algebra These two areas are the building blocks in mathematics Once pupils can master these aspects they will feel confident to tackle other branches of mathematics This book is suitable for children from 10 to 14 years of age but adults who have found mathematics difficult in the past will also benefit from it

*Vedic Maths for 8th Class (Second Edition)* Gaurish Borkar, 2017-10-13 Mathematics is a tricky subject Those who love enjoy it much and those who don't feel it's boring I lost interest in mathematics while in 7th class Based on whatever I remember it was mainly due to a lack of understanding of negative numbers By nature I am a kinaesthetic person and therefore I refuse to accept anything unless understood thoroughly Generally just memorization doesn't work for me and the same thing happened about the multiplication of negative numbers Our teacher presented them as rules and I refused to accept them at face value One year later my cousin's grandfather started living with us and he had a great interest in teaching Moreover his concepts in mathematics were extremely clear and he could answer all my crazy questions This retriggered my interest in mathematics The whole journey was so joyful that I wish everyone get a grandfather like him who is at home to help with fundamental questions in studies When I started thinking about developing books as per the curriculum the next question was which board to follow After a bit of research I got to know that CBSE is a most popular board in India and therefore I decided to develop Vedic Math books for the CBSE curriculum Finally I had a choice of developing books from class I and I decided to develop the first book for class VIII Class VIII is the foundation for board exams and therefore I felt this is the right time to start strengthening our knowledge skills and abilities The book is designed in such a way that all required methods from Vedic math are covered here and the student need not refer to any other book to learn the basics Secondly numbers data are represented in pictorial format or charts wherever appropriate This certainly simplifies the learning I have explained principles wherever relevant This shall help the pupil to understand them further and apply them confidently
