Continuum Contemporaries will be a wonderful source of ideas and inspiration for members of book clubs and readings groups, as well as for literature students. The aim of the series is to give readers accessible and informative introductions to 30 of the most popular, most acclaimed, and most influential novels of recent years. A team of contemporary fiction scholars from both sides of the Atlantic has been assembled to provide a thorough and

readable analysis of each of the novels in question. The books in the series will all follow the same structure: a biography of the novelist, including other works, influences, and, in some cases, an interview; a full-length study of the novel, drawing out the most important themes and ideas; a summary of how the novel was received upon publication; a summary of how the novel has performed since publication, including film or TV adaptations, literary prizes, etc.; a wide range of suggestions for further reading, including websites and discussion forums; and a list of questions for reading groups to discuss. Kids are wrestling with tough issues these days—peer pressure, purpose, unexpected change or loss, and wondering where their faith fits in with it all. *Roar Like a Lion* encourages your kids to "run toward the roar" as they face their fears, knowing that God is with them every step of the way. Pastor and bestselling author Levi Lusko is known for making tough topics accessible while drawing his readers toward a richer spiritual life. In his first children's devotional for ages 6 to 10, Levi tackles real issues our kids face with a lighthearted and approachable tone. Kids are equipped to approach both fun moments and tough times with their hearts set on God's faithfulness with the help of fascinating stories and facts, eye-catching art, Bible verses, prayers, and simple action steps. This 90-day devotional covers highly relevant topics such as: facing fears about school and friendships having courage to

try something new handling new challenges, past disappointments, and grief dealing with peer pressure and bullying understanding how we each fit into God's great story As a parent and pastor, Levi is able to address real-life situations with compassion, grace, and biblical authenticity. *Roar Like a Lion* is a great way to spark discussion with your kids on meaningful topics and get them in the habit of reading a biblically-based devotional. Offering practical approaches to faith in everyday life, *Roar Like a Lion* will inspire your kids to nurture their personal faith in a God strong enough to protect and guide them as they run toward the roar during the challenges in their lives. Most researchers in organization and management studies stick to two or three traditional research methods like surveys and interviews. Sticking with the familiar is seen as a safe bet, and innovation is discouraged by academic incentives and rewards. But research participants are now suffering from 'survey fatigue', and using the same old methods runs the risk of generating the same old findings. This book describes twelve unconventional methodologies in organization and management research. These include unconventional research settings and data sources, unconventional research designs and data collection methods, unconventional analytic approaches, and designs and methods that exploit new technology developments. The aim is to encourage dialogue

and experimentation with regard to the development of innovative, unconventional approaches to organization and management research. Several commentators have criticized the way in which research methods have become more formulaic, and have argued for greater diversity in research approaches. The methodological perspective that we adopt shapes our interpretation of the information that we gather. Different methods generate different kinds of information, leading to different ways of understanding the phenomena that we are investigating. Our methods influence our styles of theorizing, ways of thinking and reasoning, and forms of writing and reporting research. This book will be of value to academic researchers in organization and management studies, Doctoral candidates, and Masters students on MBA and similar programmes. Condensed matter systems where interactions are strong are inherently difficult to analyze theoretically. The situation is particularly interesting in low-dimensional systems, where quantum fluctuations play a crucial role. Here, the development of non-perturbative methods and the study of integrable field theory have facilitated the understanding of the behavior of many quasi one- and two-dimensional strongly correlated systems. In view of the same rapid development that has taken place for both experimental and numerical techniques, as well as the emergence of novel testing-

grounds such as cold atoms or graphene, the current understanding of strongly correlated condensed matter systems differs quite considerably from standard textbook presentations. The present volume of lecture notes aims to fill this gap in the literature by providing a collection of authoritative tutorial reviews, covering such topics as quantum phase transitions of antiferromagnets and cuprate-based high-temperature superconductors, electronic liquid crystal phases, graphene physics, dynamical mean field theory applied to strongly correlated systems, transport through quantum dots, quantum information perspectives on many-body physics, frustrated magnetism, statistical mechanics of classical and quantum computational complexity, and integrable methods in statistical field theory. As both graduate-level text and authoritative reference on this topic, this book will benefit newcomers and more experienced researchers in this field alike. When is it appropriate to return individual research results to participants? The immense interest in this question has been fostered by the growing movement toward greater transparency and participant engagement in the research enterprise. Yet, the risks of returning individual research results—such as results with unknown validity—and the associated burdens on the research enterprise are competing considerations. Returning Individual Research

Results to Participants reviews the current evidence on the benefits, harms, and costs of returning individual research results, while also considering the ethical, social, operational, and regulatory aspects of the practice. This report includes 12 recommendations directed to various stakeholders—investigators, sponsors, research institutions, institutional review boards (IRBs), regulators, and participants—and are designed to help (1) support decision making regarding the return of results on a study-by-study basis, (2) promote high-quality individual research results, (3) foster participant understanding of individual research results, and (4) revise and harmonize current regulations. People have always travelled within Europe for work and leisure, although never before with the current intensity. Now, however, they are travelling for many other reasons, including the quest for key services such as health care. Whatever the reason for travelling, one question they ask is "If I fall ill, will the health care I receive be of a high standard?" This book examines, for the first time, the systems that have been put in place in all of the European Union's 27 Member States. The picture it paints is mixed. Some have well developed systems, setting standards based on the best available evidence, monitoring the care provided, and taking action where it falls short. Others need to overcome significant obstacles. An introduction to computational complexity theory, its connections and interactions with mathematics, and its central role in the natural and social sciences, technology, and philosophy Mathematics and Computation provides a broad, conceptual overview of

computational complexity theory—the mathematical study of efficient computation. With important practical applications to computer science and industry, computational complexity theory has evolved into a highly interdisciplinary field, with strong links to most mathematical areas and to a growing number of scientific endeavors. Avi Wigderson takes a sweeping survey of complexity theory, emphasizing the field's insights and challenges. He explains the ideas and motivations leading to key models, notions, and results. In particular, he looks at algorithms and complexity, computations and proofs, randomness and interaction, quantum and arithmetic computation, and cryptography and learning, all as parts of a cohesive whole with numerous cross-influences. Wigderson illustrates the immense breadth of the field, its beauty and richness, and its diverse and growing interactions with other areas of mathematics. He ends with a comprehensive look at the theory of computation, its methodology and aspirations, and the unique and fundamental ways in which it has shaped and will further shape science, technology, and society. For further reading, an extensive bibliography is provided for all topics covered. Mathematics and Computation is useful for undergraduate and graduate students in mathematics, computer science, and related fields, as well as researchers and teachers in these fields. Many parts require little background,

and serve as an invitation to newcomers seeking an introduction to the theory of computation. Comprehensive coverage of computational complexity theory, and beyond High-level, intuitive exposition, which brings conceptual clarity to this central and dynamic scientific discipline Historical accounts of the evolution and motivations of central concepts and models A broad view of the theory of computation's influence on science, technology, and society Extensive bibliography "I studied nothing but your material for two weeks until I felt prepared to take the NCLEX®. **PRODUCT INNOVATION TOOLBOX** Discover how to implement consumer-centric innovation to help create new product development in this latest edition In recent years, behavioral approaches, social media listening, and other new techniques and technologies—digital techniques, augmented

intelligence, machine learning, and advanced biometrics, among others—have been foregrounded in innovation research. A focus on the evolving fields of data science and neuroscience is a driving force for both researchers and the people they study. These digital and mobile technologies have enabled researchers to augment listening, observing and categorizing methods, and to adapt new techniques in attempting to better understand consumers. On the other hand, digitized mobile societies, spurred by faster and cheaper internet access, emphasize an interconnectedness that drastically alters human behaviors and creates borderless influences. Even so, the tenets and approaches to insightful deep learning for consumers and other actors, from discovery through to the launch of successful products, remains an intrinsic part of assessing the market. Product Innovation Toolbox brings together key thought leaders and seasoned consumer researchers from corporate R&D, academia, and marketing research companies to share their experiences, advanced consumer research tools and practical tips for successful and sustainable product innovation. By offering these leading-edge tools and insights, the book ensures consumer-centric innovation by linking strategy and a designed approach. The new edition focuses on the integration and connection of all data—both structured and unstructured—for deep learning and activation, rather

than a differentiated qualitative—quantitative approach, reflecting the shifting relationships involved in the latest developments in the field. The second edition of Product Innovation Toolbox also includes: Revised material for more than 70% of the manual, with 11 new and extensively updated chapters New tools sections on digital technologies to create novel ways to stimulate and elicit insights from participants, such as Virtual Reality (VR) and Digital Augmentation Upgraded versions of tools in each updated section, with fresh examples New case studies created using the tools from the previous edition, including cases regarding cross-continental marketplaces and cross-cultural societies An emphasis on tools with global applications Product Innovation Toolbox is an essential resource for product developers, marketers, and technologists. This book brings simplicity to passive investing, smart beta, and factor investing, which is the fastest growing type of investment in the asset management industry. The subject has a strong academic foundation but often taught and presented in a quite complex and unorganized way. In recent years, index and factor investing solutions have been bestsellers. But factor investing success is not a foregone conclusion, and there are plenty of quirks and misprints in the literature. Do investors need a novel approach? The book provides answers to some of these questions in an open and

objective fashion. Index fund management is increasingly taught in finance courses at universities. For market practitioners including trustees and investors, this book facilitates an increased understanding of how to invest in index and smart beta strategies, how to implement them, and what to be aware of with concrete and practical real-world examples. Study Guide for Introduction to Human Anatomy and Physiology - E-Book - Revised Reprints A basic premise of public scholarship is making academic work and related ideas accessible and available to publics. Media engagement, whether interviews with news journalists, or the use of hashtags, is a necessary feature of any public scholarship. Media formats play a fundamental and interactive role in how people ultimately come to view and understand the social world, having had a discernable influence on election outcomes, responses to global pandemics, and so on. The question is not whether scholars should engage with media but how to do so. Drawing on fifteen years of experience that includes hundreds of print, radio, and television news interviews, dozens of published opinion pieces, and the use of social media for public engagement, this book outlines a practical, easy-to-follow approach to doing public sociology in media that consists of, and brings together, interrelated forms of

media engagement. This book also offers some advice pertaining to career advancement and provides strategies to avoid negative experiences. Doing Public Scholarship will be of general interest to those wanting to go public with their research. This book provides a practical explanation of the Analytic Hierarchy Process (AHP) method and its implementation in a decision support system to determine the scholarship recipients in a university. The discussion in this book is presented step-by-step, gradually, so that it will help readers understand every concept and stage of the AHP method and its implementation in decision support systems. This book is suitable for students, scholars, and researchers who want to implement the AHP method to build decision support systems using Python GUI and MySQL. The discussion in this book will provide readers with an understanding of the AHP method and how it works. Readers will be guided through each step of determining priority order using the AHP method through a case study accompanied by mathematical calculations. In addition, readers will also be guided step-by-step in implementing the AHP method in a decision support system to determine the scholarship recipients using Python GUI and MySQL. Readers will be guided step-by-step in designing a decision support system and realizing each design made using Python GUI and MySQL. The ultimate goal of this book is to enable

readers to build a decision support system application independently by applying the AHP method to determine the scholarship recipients in a college using Python GUI and MySQL. Portelli offers a new and challenging approach to oral history, with an interdisciplinary and multicultural perspective. Examining cultural conflict and communication between social groups and classes in industrial societies, he identifies the way individuals strive to create memories in order to make sense of their lives, and evaluates the impact of the fieldwork experience on the consciousness of the researcher. By recovering the value of the story-telling experience, Portelli's work makes delightful reading for the specialist and non-specialist alike. A Research Guide to the Ancient World: Print and Electronic Sources is a partially annotated bibliography that covers the study of the ancient world, and closes the traditional subject gap between the humanities and the social sciences in this area of study. This book is the only bibliographic resource available for such holistic coverage. Quantum Proofs provides an overview of many of the known results concerning quantum proofs, computational models based on this concept, and properties of the complexity classes they define. In particular, it discusses non-interactive proofs and the complexity class QMA, single-prover quantum interactive proof systems and the complexity class QIP,

statistical zero-knowledge quantum interactive proof systems and the complexity class QSZK, and multiprover interactive proof systems and the complexity classes QMIP, QMIP\*, and MIP\*. Quantum Proofs is mainly intended for non-specialists having a basic background in complexity theory and quantum information. A typical reader may be a student or researcher in either area desiring to learn about the fundamentals of the (actively developing) theory of quantum interactive proofs. The Work Breakdown Structure (WBS) serves as a guide for defining work as it relates to a specific project's objectives.
