

Activity 1.1.1: Simple Machines Process

Prework

Answer the following questions regarding simple machines. Each question requires proper identification and construction, including labeling of forces, distances, direction, and proper vector representations. All work should be done on a separate sheet of paper. Attach your work to the end of this packet. Be sure to document all calculations and use proper units.

All problems are to be done under standard conditions and by hand.

Simple Machines – Lever

1. Draw a class 1 lever system. Label the fulcrum, the effort force and the load force. The load is 200 N and is located 0.5 m from the fulcrum.

2. Calculate and illustrate the work output of the lever.

--

3. Explain the actual mechanical advantage of the system.

Formula	Substitute Values	Final Answer
$MA = \frac{L}{l}$	$\frac{0.5}{0.2}$	2.5

4. Using either experimental measurements, calculate the input force for the lever from the following data.

Formula	Substitute Values	Final Answer
$F_{in} = \frac{W}{MA}$	$\frac{200}{2.5}$	80 N

5. Calculate the input force for the lever from the actual data. The load is 200 N and is located 0.5 m from the fulcrum. The effort force is 80 N and is located 0.2 m from the fulcrum.

6. Illustrate and explain the lever system described above.

DDT United States. Environmental Protection Agency,1975 *The Writing Revolution* Judith C. Hochman,Natalie Wexler,2017-08-07 Why you need a writing revolution in your classroom and how to lead it The Writing Revolution TWR provides a clear method of instruction that you can use no matter what subject or grade level you teach The

model also known as The Hochman Method has demonstrated over and over that it can turn weak writers into strong communicators by focusing on specific techniques that match their needs and by providing them with targeted feedback. Insurmountable as the challenges faced by many students may seem, The Writing Revolution can make a dramatic difference. And the method does more than improve writing skills. It also helps boost reading comprehension, improve organizational and study skills, enhance speaking abilities, and develop analytical capabilities. The Writing Revolution is as much a method of teaching content as it is a method of teaching writing. There's no separate writing block and no separate writing curriculum. Instead, teachers of all subjects adapt the TWR strategies and activities to their current curriculum and weave them into their content instruction. But perhaps what's most revolutionary about the TWR method is that it takes the mystery out of learning to write well. It breaks the writing process down into manageable chunks and then has students practice the chunks they need repeatedly while also learning content.

Biomechanics of Cycling Rodrigo R. Bini, Felipe P. Carpes, 2014-04-30
Bicycles have been a common device to enhance physical fitness level in gyms and training centers along with solid use in competitive sport. For that reason, biomechanics of cycling has grown as a research field with many publications addressing different perspectives of the interaction between the cyclist and his bicycle. The most common end point of research on biomechanics of cycling is optimization of performance and reduction of injury risk. One goal of this book is to meet the growing need for a comprehensive presentation of contemporary knowledge on biomechanics of cycling which will positively influence the activity of cycling in a global fashion. In order to accomplish this purpose, ten chapters are presented with focus on varying methods for biomechanical analysis of cycling motion. The introduction section provides an overview of the main methods for assessment of cycling motion including motion analysis, pedal force measurements, muscle activation, anthropometry, and joint kinetics. These methods are discussed in depth in individual chapters followed by chapters on characteristics of bicycles and potential perspectives to improve their configuration in order to improve performance of cyclists and reduce their overuse injury risk. Moreover, a preliminary method to train technique in cyclists is shown. A final chapter provides the authors' perspective on the upcoming technology that should be effective in helping training of cyclists.
