Phage Display Carlos F. Barbas, 2001 Phage display technology has begun to make critical contributions to the study of molecular recognition DNA sequences are cloned into phage which then present on their surface the proteins encoded by the DNA Individual phage are rescued through interaction of the displayed protein with a ligand and the specific phage is amplified by infection of bacteria Phage display technology is powerful but challenging and the aim of this manual is to provide comprehensive instruction in its theoretical and applied so that any scientist with even modest molecular biology experience can effectively employ it The manual reflects nearly a decade of experience with students of greatly varying technical expertise and experience who attended a course on the technology at Cold Spring Harbor Laboratory Phage display technology is growing in importance and power This manual is an unrivalled source of expertise in its execution and application

Statistical Methods in Water Resources D.R. Helsel, R.M. Hirsch, 1993-03-03 Data on water quality and other environmental issues are being collected at an ever increasing rate In the past however the techniques used by scientists to interpret this data have not progressed as quickly This is a book of modern statistical methods for analysis of practical problems in water quality and water resources The last fifteen years have seen major advances in the fields of exploratory data analysis EDA and robust statistical methods The real life characteristics of environmental data tend to drive analysis towards the use of these methods These advances are presented in a practical and relevant format Alternate methods are compared highlighting the strengths

and weaknesses of each as applied to environmental data Techniques for trend analysis and dealing with water below the detection limit are topics covered which are of great interest to consultants in water quality and hydrology scientists in state provincial and federal water resources and geological survey agencies The practising water resources scientist will find the worked examples using actual field data from case studies of environmental problems of real value Exercises at the end of each chapter enable the mechanics of the methodological process to be fully understood with data sets included on diskette for easy use The result is a book that is both up to date and immediately relevant to ongoing work in the environmental and water sciences
