Assessment of Fuel Economy Technologies for Light-Duty Vehicles Mar 01 2024 Various combinations of commercially available technologies could greatly reduce fuel consumption in passenger cars, sport-utility vehicles, minivans, and other light-duty vehicles without compromising vehicle performance or safety. *Assessment of Technologies for Improving Light Duty Vehicle Fuel Economy* estimates the potential fuel savings and costs to consumers of available technology combinations for three types of engines: spark-ignition gasoline, compression-ignition diesel, and hybrid. According to its estimates, adopting the full combination of improved technologies in medium and large cars and pickup trucks with spark-ignition engines could reduce fuel consumption by 29 percent at an additional cost of \$2,200 to the consumer. Replacing spark-ignition engines with diesel engines and components would yield fuel savings of about 37 percent at an added cost of approximately \$5,900 per vehicle, and replacing spark-ignition engines with hybrid engines and components would reduce fuel consumption by 43 percent at an increase of \$6,000 per vehicle. The book focuses on fuel consumption—the amount of fuel consumed in a given driving distance—because energy savings are directly related to the amount of fuel used. In contrast, fuel economy measures how far a vehicle will travel with a gallon of fuel. Because fuel consumption data indicate money saved on fuel purchases and reductions in carbon dioxide emissions, the book finds that vehicle stickers should provide consumers with fuel consumption data in addition to fuel economy information.

The Opposite of Loneliness Jun 23 2023 The instant New York Times bestseller and publishing phenomenon: Marina Keegan's posthumous collection of award-winning essays and stories "sparkles with talent, humanity, and youth" (O, The Oprah Magazine). Marina Keegan's star was on the rise when she graduated magna cum laude from Yale in May 2012. She

had a play that was to be produced at the New York Fringe Festival and a job waiting for her at The New Yorker. Tragically, five days after graduation, Marina died in a car crash. Marina left behind a rich, deeply expansive trove of writing that, like her title essay, captures the hope, uncertainty, and possibility of her generation. Her short story "Cold Pastoral" was published on NewYorker.com. Her essay "Even Artichokes Have Doubts" was excerpted in the Financial Times, and her book was the focus of a Nicholas Kristof column in The New York Times. Millions of her contemporaries have responded to her work on social media. As Marina wrote: "We can still do anything. We can change our minds. We can start over... We're so young. We can't, we MUST not lose this sense of possibility because in the end, it's all we have." The Opposite of Loneliness is an unforgettable collection of Marina's essays and stories that articulates the universal struggle all of us face as we figure out what we aspire to be and how we can harness our talents to impact the world. "How do you mourn the loss of a fiery talent that was barely a tendril before it was snuffed out? Answer: Read this book. A clear-eyed observer of human nature, Keegan could take a clever idea...and make it something beautiful" (People).

Policy Options for Reducing Energy Use and Greenhouse Gas Emissions from U.S. Transportation Jan 19 2023 It is not intended to model or quantify the impacts of each policy option over time but instead to examine the means by which each influences behavior and the demand for and supply of energy- and emissions-saving technology, particularly in the modes of transportation with the greatest effect on the sector's consumption of petroleum and emissions of GHGs. In choosing among policies, elected officials must take into account many factors that could not be examined in this study, such as the full range of safety, economic, and environmental implications of their choices; therefore, the report does not recommend a specific suite of policies to pursue. Instead, the emphasis is on assessing each policy approach with regard to its applicability across transportation modes and its ability to affect the total amount of energy-intensive transportation activity, the efficiency of transportation vehicles, and GHG emissions characteristics of the sector's energy supply.

Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles Oct 28 2023 The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.
