

Effects of Meditation Training Sessions on Study Habits

Meditation, as a strategy for patient care, is being used with increasing frequency as a strategy for non-invasive treatment of stress related behavioral disorders, with remarkable success levels in a wide range of populations (Anderson, 2015). As a treatment, meditation relies on a wide variety of MTM (Meditation Training Methods), some of which have been developed recently, in conjunction with *holistic* medical practices, and some of which have been used for, literally, centuries, in one form or another (Berk & Wise, 2016). Studies researching the effectiveness of meditation training (Morris, Langley & Hill, 2015; Wastrom, 2014) have tended to gather statistics from participants who had been exposed to meditation prior to testing, and who were not screened for similarity in disposition with regard to their risk level for responding unfavorably or favorably to stress levels. Our study hopes to introduce a level of consistency in the participants backgrounds and likelihood of response levels to the training. [section continues]

Consciousness is our gateway to experience it enables us to recognize Van Gogh's starry skies be enraptured by Beethoven's Fifth and stand in awe of a snowcapped mountain Yet consciousness is subjective personal and famously difficult to examine philosophers have for centuries declared this mental entity so mysterious as to be impenetrable to science In *The Ravenous Brain* neuroscientist Daniel Bor departs sharply from this historical view and builds on the latest research to propose a new model for how consciousness works Bor argues that this brain based faculty evolved as an accelerated knowledge gathering tool Consciousness is effectively an idea factory that choice mental space dedicated to innovation a key component of which

is the discovery of deep structures within the contents of our awareness This model explains our brains ravenous appetite for information and in particular its constant search for patterns Why for instance after all our physical needs have been met do we recreationally solve crossword or Sudoku puzzles Such behavior may appear biologically wasteful but according to Bor this search for structure can yield immense evolutionary benefits it led our ancestors to discover fire and farming pushed modern society to forge ahead in science and technology and guides each one of us to understand and control the world around us But the sheer innovative power of human consciousness carries with it the heavy cost of mental fragility Bor discusses the medical implications of his theory of consciousness and what it means for the origins and treatment of psychiatric ailments including attention deficit disorder schizophrenia manic depression and autism All mental illnesses he argues can be reformulated as disorders of consciousness a perspective that opens up new avenues of treatment for alleviating mental suffering A controversial view of consciousness The Ravenous Brain links cognition to creativity in an ingenious solution to one of science s biggest mysteries
