there are large differences in economic conditions and the standard of living between regions and even between communities within the same region In many countries poverty has a clear geographic dimension since the poor are often concentrated in pockets of poverty Therefore the design of poverty alleviation policies must also have a significant spatial component Although development projects are carefully designed and meticulously evaluated for cost effectiveness and benefits too many of them are not sufficiently targeted geographically The growing availability and use of spatial data organized in a computer system such as a geographical information system GIS makes it more feasible to analyze the impact of projects in specific locales and to achieve more effective targeting Geographical Targeting for Poverty Alleviation introduces the basic concepts of a GIS It also demonstrates how to organize geographic and nongeographic data In addition it presents different methods for using the data of the Household Income and Expenditure Survey together with other surveys and the population census to provide estimates for the standard of living and the incidence of poverty incidence in different geographical areas of a country Ultimately these estimates should be used to establish guidelines for targeting poverty alleviation projects This publication illustrates different GIS applications for identifying the project s target population determining the project s spatial sphere of influence or deciding where to locate public facilities This publication is of interest to task managers economists development researchers and geographers [Boating](#) ,1997-01 *Wilderness Navigation* Bob Burns, Mike Burns, 2015-02-24 [CLICK HERE](#) to download a sample The official navigation textbook used in outdoor education courses by thousands of students Goodreads com readers rated the previous edition 4 out of 5 stars and now it s even better Map and compass skills remain the foundation for traveling safely in the wilderness This new third edition is a major and complete update of the popular textbook Improved throughout for clarity with chapter objectives presented at the beginning of each chapter and summaries skills check mini quizzes and practice problems listed at the end Updated descriptions of the most current maps compasses altimeters and Global Positioning System GPS receivers Updated declination maps for the United States and the world declination changes over time and compasses must be adjusted for a specific location to provide correct readings Much expanded GPS chapter including interfacing the GPS receiver with the home computer maximizing battery life and using the GPS function on a smart phones along with a description of their limitations Additional information on non GPS navigational techniques Recommended websites apps and other sources of useful navigational information
