Linear Algebra for Economists Fuad Aleskerov, Hasan Ersel, Dmitri Piontkovski, 2011-08-18 This textbook introduces students of economics to the fundamental notions and instruments in linear algebra. Linearity is used as a first approximation to many problems that are studied in different branches of science including economics and other social sciences. Linear algebra is also the most suitable to teach students what proofs are and how to prove a statement. The proofs that are given in the text are relatively easy to understand and also endow the student with different ways of thinking in making proofs. Theorems for which no proofs are given in the book are illustrated via figures and examples. All notions are illustrated appealing to geometric intuition. The book provides a variety of economic examples using linear algebraic tools. It mainly addresses students in economics who need to build up skills in understanding mathematical reasoning. Students in mathematics and informatics may also be interested in learning about the use of mathematics in economics.

Biology of Blood-Sucking Insects Mike Lehane, 2012-12-06 Blood sucking insects are the vectors of many of the most debilitating parasites of man and his domesticated animals. In addition, they are of considerable direct cost to the agricultural industry through losses in milk and meat yields and through damage to hides and wool etc. So not surprisingly many books of medical and veterinary entomology have been written. Most of these texts are organized taxonomically giving the details of the life cycles, bionomics, relationship to disease and economic importance of each of the insect groups. In turn, I have taken a different approach. This book is topic led and aims to discuss the biological themes which are common in the lives of blood sucking insects. To do this, I have concentrated on those aspects of the biology of these fascinating insects which have been clearly modified in some way to suit the blood sucking habit. For example, I have discussed feeding and digestion in some detail because feeding on blood presents insects with special problems, but I have not discussed respiration because it is not affected in any particular way by haematophagy. Naturally, there is a subjective element in the choice of topics for discussion and the weight given to each. I hope that I have not let my enthusiasm for particular subjects get the better of me on too many occasions and that the subject material achieves an overall balance.
