Examination of Smoke and Carbon from Turbojet-engine Combustors Sep 16 2021 Smoke and carbon from turbojet-engine combustors were studied by the methods of electron microscopy, chemical analysis, and x-ray diffraction. The smoke exhausting from a combustor was found to consist of carbon black, agglomerated into soot. The carbon black had been partially burned in its passage through the flame zone. The smoke resulted from the incomplete combustion of the vaporized fuel; it was not the result of the pyrolysis of fuel droplets. The soft carbon in the dome of the combustor liner was found to consist of carbon black and soot intermixed with indeterminate complexes such as high-boiling fuel ends and partly polymerized and pyrolyzed heavy hydrocarbons. The hard carbon on the walls of the combustor liner was found to be largely petroleum coke. The coke was apparently formed by the liquid phase cracking, pyrolysis, and subsequent coking on the liner wall of fuel from the spray nozzle.

The Big Book of Engines (Thomas & Friends) Sep 09 2023 Meet all of the engines in this Thomas & Friends board book with a padded cover! Train-loving boys and girls ages 2 to 5 will love to discover fascinating facts about Thomas, Nia, Bertie, Harold, and all their favorite Thomas & Friends characters in this sturdy board book with padded cover. In the early 1940s, a loving father crafted a small blue wooden train engine for his son, Christopher. The stories that this father, the Reverend W Awdry, made up to accompany the wonderful toy were first published in 1945 and became the basis for the Railway Series, a collection of books about Thomas the Tank Engine and his friends--and the rest is history. Thomas & Friends(TM) are now a big extended family of engines and others on the Island of Sodor. They appear not only in books but also in television shows and movies, and as a wide variety of beautifully made toys. The adventures of Thomas and his friends, which are always, ultimately, about friendship, have delighted generations of train-loving boys and girls for more than 70 years and will continue to do so for generations to come.

[Reeds Vol 12 Motor Engineering Knowledge for Marine Engineers](#) May 25 2022 Developed to complement Reeds Vol 8 (General Engineering for Marine Engineers), this indispensable textbook comprehensively covers the motor engineering syllabus for marine engineering officer cadets. Starting with the theoretical and practical thermodynamic operating cycles, the book is structured to give a description of the engines and components used to extract energy from fossil fuels and achieve high levels of efficiency. Accessibly written and clearly illustrated, this book is the only guide available for marine engineering students focusing on the knowledge needed for passing the motor engineering certificate of Competency (CoC) examinations. This new edition reflects all developments within the discipline and includes updates and additions on, amongst other things: · Engine emissions and control engineering · Fuel injection · Starting and reversing · Ancillary supply systems · Safety and the environment Plus updates to many of the technical engineering drawings.

Thomas Edison: Success and Innovation through Failure Jul 15 2021 This book develops a systematic approach to the role of failure in innovation, using the laboratory notebooks of America's most successful inventor, Thomas Edison. It argues that Edison's active pursuit of failure and innovative uses of failure as a tool were crucial to his success. From this the author argues that not only should we expect innovations to fail but that there are good reasons to want them to fail. Using Edison's laboratory notebooks, written as he worked and before he knew the outcome we see the many false starts, wrong directions and failures that he worked through on his way to producing revolutionary inventions. While Edison's strengths in exploiting failure made him the icon of American inventors, they could also be liabilities when he moved from one field to another. Not only is this book of value to readers with an interest in the history of technology and American invention, its insights are important to those who seek to innovate and to those who employ and finance them.

Flight Lieutenant Thomas 'Tommy' Rose DFC Mar 23 2022 Flight Lieutenant Thomas 'Tommy'

Rose, a First World War fighter ace, was a pioneer of private flying. He installed and managed the UK's first fuel pump for private aviation at Brooklands before becoming Sales Manager for Phillips and Powis Aircraft Ltd. The chief flying instructor at several early flying schools, Tommy became the Chief Test Pilot for Miles Aircraft and was the winner of air races and pageants. He was undoubtedly a pilot who could always be relied on to amaze the onlookers with his fast, accurate stunts and low-level flying. Mentioned in Despatches in 1916 and awarded the DFC in 1918, Tommy was attacked in his aircraft several times, yet his astonishing ability at the controls of his aircraft enabled him to land without serious injury. By the time of the Armistice, Tommy had been credited with eleven 'kills'. He continued to demonstrate these skills after the war and though this true trailblazer was widely known in his glory days during the early part of the twentieth century, little is remembered about him today. Yet Tommy Rose achieved the most incredible feats of aviation and was considered one of the finest pilots of his era, completing over 11,200 flying hours up to 1949. In the 1930s, Tommy took the Imperial Airways route through East Africa, to set up a new world record on the UK to Cape Town passage, beating Amy Mollison (Johnson) who took the shorter course down the west coast. He also won the King's Cup Air Race in 1935. Tommy flew many of the early RAF fighters from Maurice Farman to the Spitfire Mk.IX, and, from late 1939, when he was appointed Chief Test Pilot for Phillip & Powis Aircraft Ltd at Woodley (forerunners of Miles Aircraft Ltd), he test flew all Miles monoplane training and target towing aircraft, leaving in January 1946. His last position was as General Manager of Universal Flying Services Ltd at Fairoaks Aerodrome in Surrey. The result of decades of research by the author, through this book the life and adventures of one of history's most accomplished and daring aviators can finally be told.

Parry Thomas Aug 08 2023 This biography of the Welsh engineer and racing driver recounts the achievements of his remarkable life and his death in pursuit of a dream. In April of 1926, J.G. Parry-Thomas broke the land speed record, reaching 171.02 miles per hour in a car he designed himself. He and his car Babs were celebrated across the world. But less than a year later, his record was beaten by Colin Campbell at Pendine Sands, on the south coast of Wales. After refitting Babs, Parry-Thomas set out to reclaim his record in a drive that would tragically be his last. In this authoritative biography, Hugh Tours explores the fascinating life of the brilliant and adventuresome Parry-Thomas. From a conventional upbringing in Wales, he became a prominent figure in the developing world of high-speed motor car racing and design. As the chief engineer at Leyland Motors, he designed the Leyland Eight, a landmark in automotive design that bristled with novel features. It was experience of driving this car around Brooklands racetrack that persuaded Parry-Thomas to leave Leyland and devote himself to racing full-time. This edition includes thirty-six photographs and drawings, with an additional chapter detailing the recovery and restoration of Babs.
