

Chapter 15: The Chromosomal Basis of Inheritance

Concept 15.1 Mendelian inheritance has its physical basis in the behavior of chromosomes

1. What is the *chromosome theory of inheritance*?

The chromosome theory of inheritance is a basic principle in biology stating that genes are located at specific positions (loci) on chromosomes and that the behavior of chromosomes during meiosis accounts for inheritance patterns.

2. Explain the *law of segregation*. Use two different colored pencils to illustrate the segregation of alleles. You may want to consult Figure 15.2 in your text, and model your sketches on this.

See page 287 in your text for the labeled figure.

The law of segregation states that the two alleles for each gene separate during gamete formation.

3. Explain the *law of independent assortment*. To demonstrate that you understand this concept, consider a cell with two pairs of chromosomes. Sketch the two different ways these chromosomes might be arranged during metaphase I.

See page 287 in your text for the labeled figure.

The law of independent assortment states that each pair of alleles segregates, or assorts, independently of each other pair during gamete formation; applies when genes for two characters are located on different pairs of homologous chromosomes or when they are far enough apart on the same chromosome to behave as though they are on different chromosomes.

4. *Thomas Hunt Morgan* selected *Drosophila melanogaster* as his experimental organism. List at least three reasons the fruit fly is an excellent subject for genetic studies.

1. Single mating will produce hundreds of offspring.
2. A new generation can be bred every two weeks.
3. The fruit fly has only four pairs of chromosomes, which are easily distinguishable with a light microscope.

5. The notation for *wild type* and *mutant* traits follows some accepted conventions. Notate the following genotypes for a female fruit fly:

- a. a fly homozygous for red eyes $X^{+}X^{+}$
- b. a fly heterozygous for red eyes $X^{+}X^{-}$
- c. a fly homozygous for white eyes $X^{-}X^{-}$
