The Algorithmic Foundations of Differential Privacy Cynthia Dwork, Aaron Roth, 2014 The problem of privacy preserving data analysis has a long history spanning multiple disciplines As electronic data about individuals becomes increasingly detailed and as technology enables ever more powerful collection and curation of these data the need increases for a robust meaningful and mathematically rigorous definition of privacy together with a computationally rich class of algorithms that satisfy this definition Differential Privacy is such a definition The Algorithmic Foundations of Differential Privacy starts out by

motivating and discussing the meaning of differential privacy and proceeds to explore the fundamental techniques for achieving differential privacy and the application of these techniques in creative combinations using the query release problem as an ongoing example A key point is that by rethinking the computational goal one can often obtain far better results than would be achieved by methodically replacing each step of a non private computation with a differentially private implementation Despite some powerful computational results there are still fundamental limitations Virtually all the algorithms discussed herein maintain differential privacy against adversaries of arbitrary computational power certain algorithms are computationally intensive others are efficient Computational complexity for the adversary and the algorithm are both discussed The monograph then turns from fundamentals to applications other than query release discussing differentially private methods for mechanism design and machine learning The vast majority of the literature on differentially private algorithms considers a single static database that is subject to many analyses Differential privacy in other models including distributed databases and computations on data streams is discussed The Algorithmic Foundations of Differential Privacy is meant as a thorough introduction to the problems and techniques of differential privacy and is an invaluable reference for anyone with an interest in the topic

Brand New Justice Simon Anholt,2006-08-11 Recently vilified as the prime dynamic driving home the breach between poor and rich nations here the branding process is rehabilitated as a potential saviour of the economically underprivileged Brand New Justice now in a revised paperback edition systematically analyses the success stories of the Top Thirteen nations demonstrating that their wealth is based on the last mile of the commercial process buying raw materials and manufacturing cheaply in third world countries these countries realise their lucrative profits by adding value through finishing packaging and marketing and then selling the branded product on to the end user at a hugely inflated price The use of sophisticated global media techniques alongside a range of creative marketing activities are the lynchpins of this process Applying his observations on economic history and the development and impact of global marketing Anholt presents a cogent plan for developing nations to benefit from globalization So long the helpless victim of capitalist trading systems he shows that they can cross the divide and graduate from supplier nation to producer nation Branding native produce on a global scale making

a commercial virtue out of perceived authenticity and otherness and fully capitalising on the last mile benefits are key to this graduation and fundamental to forging a new global economic balance Anholt argues with a forceful logic but also backs his hypothesis with enticing glimpses of this process actually beginning to take place Examining activities in India Thailand Russia and Africa among others he shows the risks challenges and pressures inherent in turning the tide but above all he demonstrates the very real possibility of enlightened capitalism working as a force for good in global terms
