Python for Mechanical and Aerospace Engineering Alex Kenan,2021-01-01 The traditional computer science courses for engineering focus on the fundamentals of programming without demonstrating the wide array of practical applications for fields outside of computer science Thus the mindset of Java Python is for computer science people or programmers and MATLAB is for engineering develops MATLAB tends to dominate the engineering space because it is viewed as a batteries included software kit that is focused on functional programming Everything in MATLAB is some sort of array and it lends

itself to engineering integration with its toolkits like Simulink and other add ins The downside of MATLAB is that it is proprietary software the license is expensive to purchase and it is more limited than Python for doing tasks besides calculating or data capturing This book is about the Python programming language Specifically it is about Python in the context of mechanical and aerospace engineering Did you know that Python can be used to model a satellite orbiting the Earth You can find the completed programs and a very helpful 595 page NSA Python tutorial at the book s GitHub page at <https://www.github.com/alexkenan/pymae> Read more about the book including a sample part of Chapter 5 at <https://pymae.github.io>

Practical Finite Element Analysis Nitin S. Gokhale, 2008 Highlights of the book Discussion about all the fields of Computer Aided Engineering Finite Element Analysis Sharing of worldwide experience by more than 10 working professionals Emphasis on Practical usage and minimum mathematics Simple language more than 1000 colour images International quality printing on specially imported paper Why this book has been written FEA is gaining popularity day by day is a sought after dream career for mechanical engineers Enthusiastic engineers and managers who want to refresh or update the knowledge on FEA are encountered with volume of published books Often professionals realize that they are not in touch with theoretical concepts as being pre requisite and find it too mathematical and Hi Fi Many a times these books just end up being decoration in their book shelves All the authors of this book are from IIT s IISc and after joining the industry realized gap between university education and the practical FEA Over the years they learned it via interaction with experts from international community sharing experience with each other and hard route of trial error method The basic aim of this book is to share the knowledge practices used in the industry with experienced and in particular beginners so as to reduce the learning curve avoid reinvention of the cycle Emphasis is on simple language practical usage minimum mathematics no pre requisites All basic concepts of engineering are included as where it is required It is hoped that this book would be helpful to beginners experienced users managers group leaders and as additional reading material for university courses
