Industrial Chemical Process Analysis and Design Mariano Martín Martín, 2016-07-02 Industrial Chemical Process Analysis and Design uses chemical engineering principles to explain the transformation of basic raw materials into major chemical products. The book discusses traditional processes to create products like nitric acid, sulphuric acid, ammonia, and methanol, as well as more novel products like bioethanol and biodiesel. Historical perspectives show how current chemical processes have developed over years or even decades to improve their yields from the discovery of the chemical reaction or physico-chemical principle to the industrial process needed to yield commercial quantities. Starting with an introduction to process design, optimization, and safety, Martín then provides stand-alone chapters in a case study fashion for commercially important chemical production processes. Computational software tools like MATLAB, Excel, and Chemcad are used throughout to aid process analysis. Integrates principles of chemical engineering, unit operations, and chemical reactor engineering to understand process synthesis and analysis. Combines traditional computation and modern software tools to compare different solutions for the same problem. Includes historical perspectives and traces the improving efficiencies of commercially important chemical production processes. Features worked examples and end-of-chapter problems with solutions to show the application of concepts discussed in the text.

Chemical Process Design and Integration Robin Smith, 2016-08-02 Written by a highly regarded author with industrial and academic experience, this new edition of an established bestselling book provides practical guidance for students, researchers, and those in chemical engineering. Process Design Helmut Mothes, 2015-05-16 This book promotes process design strategies and methods to chemical engineering students and encourages experienced engineers to reflect on and perhaps challenge their daily approach to process design. The production facilities and supply chains of the chemical industry represent complex global systems built on sophisticated technological processes. While process design of the past could rely on steadily growing economies creating a predictable framework of product demand, raw material availability, and technological progress, today global competition, shorter product cycles, unreliable raw material supplies, and emerging disruptive technologies create new challenges to the design of efficient, flexible, and sustainable processes. A holistic design methodology has to take care of these challenges. Process design can build on many excellent chemical engineering textbooks focusing on unit operations, process intensification, or process integration. Only a few books address the creative step of finding an initial process structure. Process design methodologies constitute the main topic of this book. A special focus is given to the search for an optimal process structure, process synthesis, since an inferior process structure cannot be upgraded into an optimal process during later extensive optimization of process parameters, regardless of the effort. The design methodology illustrated in the textbook first outlines alternate strategies to find an initial process structure: hierarchical approach or superstructure concepts with heuristic rules or mixed integer non-linear programming. The role of design targets to guide a process designer is shown for energy integration and capital investment. In a next design step, process intensification and integration are used to improve the initial process structure with respect to unit operation efficiencies, heating, cooling, and mixing, and process synergies, heat power integration, reaction, distillation, dividing wall column, etc., resulting in superior processes. The last step of the process design methodology introduces the concept of no-regret solutions. These no-regret solutions aim at process designs offering a robust performance in different future scenarios, fluctuating or unexpected product demand. Modular designs offer a powerful tool to establish highly flexible chemical processes. The design methodology is demonstrated in a comprehensive design case dealing with 6 chemical processes integrated into a production site. The design procedure to derive process and plant structures is illustrated in a step-by-step approach. To a large extent, this book on process design builds on experiences of the author at Bayer Technology Services. The book includes the input of many Bayer people, technical contributions, exciting suggestions, and enlightening discussions. The book summarizes courses on Process Intensification and Process Design given by the author at the Technical University Dresden (TU Dresden) 2008, East China University of Science and Technology (ECUST) Shanghai 2012, 2014, and Ruhr University Bochum (RUB) 2014, 2015.
