Chemistry George A. Olah, 2000-12-29 The fascinating autobiographical reflections of Nobel Prize winner George Olah How did a young man who grew up in Hungary between the two World Wars go from cleaning rubble and moving pianos at the end of World War II in the Budapest Opera House to winning the Nobel Prize in Chemistry George Olah takes us on a remarkable journey from Budapest to Cleveland to Los Angeles with a stopover in Stockholm of course An innovative scientist George Olah is truly one of a kind whose amazing research into extremely strong acids and their new chemistry yielded what is now commonly known as superacidic magic acid chemistry A Life of Magic Chemistry is an intimate look at the many journeys that George Olah has traveled from his early research and teaching in Hungary to his move to North America where during his years in industry he continued his study of the elusive cations of carbon to his return to academia

in Cleveland and finally his move to Los Angeles where he built the Loker Hydrocarbon Research Institute to find new solutions to the grave problem of the world's diminishing natural oil and gas resources and to mitigate global warming by recycling carbon dioxide into hydrocarbon fuels and products Professor Olah invites the reader to enjoy the story of his remarkable path marked by hard work imagination and never ending quests for discovery which eventually led to the Nobel Prize Intertwining his research and teaching with a unique personal writing style truly makes *A Life of Magic Chemistry* an engaging read His autobiography not only touches on his exhilarating life and pursuit for new chemistry but also reflects on the broader meaning of science in our perpetual search for understanding and knowledge

Introduction to Glass Science and Technology James E Shelby, 2015-11-06 This book provides a concise and inexpensive introduction for an undergraduate course in glass science and technology The level of the book has deliberately been maintained at the introductory level to avoid confusion of the student by inclusion of more advanced material and is unique in that its text is limited to the amount suitable for a one term course for students in materials science ceramics or inorganic chemistry The contents cover the fundamental topics of importance in glass science and technology including glass formation crystallization phase separation and structure of glasses Additional chapters discuss the most important properties of glasses including discussion of physical optical electrical chemical and mechanical properties A final chapter provides an introduction to a number of methods used to form technical glasses including glass sheet bottles insulation fibre optical fibres and other common commercial products In addition the book contains discussion of the effects of phase separation and crystallization on the properties of glasses which is neglected in other texts Although intended primarily as a textbook *Introduction to Glass Science and Technology* will also be invaluable to the engineer or scientist who desires more knowledge regarding the formation properties and production of glass

Command Of The Air General Giulio Douhet, 2014-08-15 In the pantheon of air power spokesmen Giulio Douhet holds center stage His writings more often cited than perhaps actually read appear as excerpts and aphorisms in the writings of numerous other air power spokesmen advocates and critics Though a highly controversial figure the very controversy that surrounds him offers to us a testimonial of the value and depth of his work and the need for airmen today to become familiar with his thought The progressive development of air power to the point where today it is more correct to refer to aerospace power has not outdated the notions of Douhet in the slightest In fact in many ways the kinds of technological capabilities that we enjoy as a global air power provider attest to the breadth of his vision Douhet together with Hugh Boom Trenchard of Great Britain and William Billy Mitchell of the United States is justly recognized as one of the three great spokesmen of the early air power era This reprint is offered in the spirit of continuing the dialogue that Douhet himself so perceptively began with the first edition of this book published in 1921 Readers may well find much that they disagree with in this book but also much that is of enduring value The vital necessity of Douhet's central vision that command of the air is all important in modern warfare has been proven throughout the history of wars in this

century from the fighting over the Somme to the air war over Kuwait and Iraq

The Sciences of the Artificial, reissue of the third edition with a new introduction by John Laird
Herbert A. Simon, 2019-08-13 Herbert Simon's classic work on artificial intelligence in the expanded and updated third edition from 1996 with a new introduction by John E Laird Herbert Simon's classic and influential The Sciences of the Artificial declares definitively that there can be a science not only of natural phenomena but also of what is artificial Exploring the commonalities of artificial systems including economic systems the business firm artificial intelligence complex engineering projects and social plans Simon argues that designed systems are a valid field of study and he proposes a science of design For this third edition originally published in 1996 Simon added new material that takes into account advances in cognitive psychology and the science of design while confirming and extending

the book's basic thesis that a physical symbol system has the necessary and sufficient means for intelligent action. Simon won the Nobel Prize for Economics in 1978 for his research into the decision making process within economic organizations and the Turing Award, considered by some the computer science equivalent to the Nobel, with Allen Newell in 1975 for contributions to artificial intelligence, the psychology of human cognition and list processing. *The Sciences of the Artificial* distills the essence of Simon's thought accessibly and coherently. This reissue of the third edition makes a pioneering work available to a new audience.

Biochar for Environmental Management Dr. Johannes Lehmann, Stephen Joseph, 2009. Biochar is the carbon rich product when biomass such as wood manure or crop residues is heated in a closed container with little or no available air. It can be used to improve agriculture and the environment in several ways and its stability in soil and superior nutrient retention properties make it an ideal soil amendment to increase crop yields. In addition to this biochar sequestration in combination with sustainable biomass production can be carbon negative and therefore used to actively remove carbon dioxide from the atmosphere with major implications for mitigation of climate change. Biochar production can also be combined with bioenergy production through the use of the gases that are given off in the pyrolysis process. This book is the first to synthesize the expanding research literature on this topic. The book's interdisciplinary approach which covers engineering, environmental sciences, agricultural sciences, economics and policy is a vital tool at this stage of biochar technology development. This comprehensive overview of current knowledge will be of interest to advanced students, researchers and professionals in a wide range of disciplines.

The Craft and Science of Coffee Britta Folmer, 2016-12-16. *The Craft and Science of Coffee* follows the coffee plant from its origins in East Africa to its current role as a global product that influences millions of lives through sustainable development, economics and consumer desire. For most coffee is a beloved beverage. However, for some it is also an object of scientific study and for others it is approached as a craft, both building on skills and experience. By combining the research and insights of the scientific community and expertise of the craftspeople, this unique book brings readers into a sustained and inclusive conversation, one where academic and industrial thought leaders, coffee farmers and baristas are quoted, each informing and enriching each other. This unusual approach guides the reader on a journey from coffee farmer to roaster, market analyst to barista in a style that is both rigorous and experience based, universally relevant and personally engaging. From on-farming processes to consumer benefits, the reader is given a deeper appreciation and understanding of coffee's complexity and is invited to form their own educated opinions on the ever-changing situation, including potential routes to further shape the coffee future in a responsible manner. Presents a novel synthesis of coffee research and real-world experience that aids understanding, appreciation and potential action. Includes contributions from a multitude of experts who address complex subjects with a conversational approach. Provides expert discourse on the coffee value chain from agricultural and production practices.

I?U. Grosberg,A. R. Khokhlov,Pierre-Gilles de Gennes,2011 Giant molecules are important in our everyday life But as pointed out by the authors they are also associated with a culture What Bach did with the harpsichord Kuhn and Flory did with polymers We owe a lot of thanks to those who now make this music accessible Pierre Gilles de Gennes Nobel Prize laureate in Physics Foreword for the 1st Edition March 1996 This book describes the basic facts concepts and ideas of polymer physics in simple yet scientifically accurate terms In both scientific and historic contexts the book shows how the subject of polymers is fascinating as it is behind most of the wonders of living cell machinery as well as most of the newly developed materials No mathematics is used in the book beyond modest high school algebra and a bit of freshman calculus yet very sophisticated concepts are introduced and explained ranging from scaling and reptations to protein folding and evolution The new edition includes an extended section on polymer preparation methods discusses knots formed by molecular filaments and presents new and updated materials on such contemporary topics as single molecule experiments with DNA or polymer properties of proteins and their roles in biological evolution **Scientific and Technical Aerospace Reports** ,1993
