MANUAL - NV3550**DESCRIPTION**

The NV3550 is a medium-duty, 5-speed, constant mesh, fully synchronized manual transmission. The transmission is available in two and four-wheel drive configurations.

The gear case consists of two aluminum housings and a removable clutch housing. The clutch housing is not an integral part of the transmission.

Roller bearings and needle bearings are used in the transmission. The transmission gears all rotate on caged type needle bearings. Roller bearings are used to support the input, output and counter shafts.

The transmission has a single shaft shift mechanism with three shift forks all mounted on the shaft. The shaft is supported in the front and rear housings by bushings and one linear ball bearing. Internal shift components consist of the forks, shaft, shift lever socket and detent components.

The drain plug is located in the bottom of the transmission and fill plug is on the left side.

OPERATION

The driver selects a particular gear by moving the shift lever to the desired gear position. This movement moves the internal transmission shift components to begin the shift sequence. As the shift lever moves the selected shift rail, the shift fork attached to that rail begins to move. The fork is positioned in a groove in the outer circumference of the synchronizer sleeve. As the shift fork moves the synchronizer sleeve, the synchronizer begins to speed-up or slow down the selected gear (depending on whether we are up-shifting or down-shifting). The synchronizer does this by having the synchronizer hub splined to the mainshaft, or the countershaft in some cases, and moving the blocker ring into contact with the gear's

friction cone. As the blocker ring and friction cone come together, the gear speed is brought up or down to the speed of the synchronizer. As the two speeds match, the splines on the inside of the synchronizer sleeve become aligned with the teeth on the blocker ring and the friction cone and eventually will slide over the teeth, locking the gear to the mainshaft, or countershaft, through the synchronizer.

DIAGNOSIS AND TESTING**LOW LUBRICANT LEVEL**

A low transmission lubricant level is generally the result of a leak, inadequate lubricant fill, or an incorrect lubricant level check.

Leaks can occur at the mating surfaces of the gear case, intermediate plate and adaptor or extension housing, or from the front/rear seals. A suspected leak could also be the result of an overfill condition.

Leaks at the rear of the extension or adapter housing will be from the housing oil seals. Leaks at component mating surfaces will probably be the result of inadequate sealer, gaps in the sealer, incorrect bolt tightening, or use of a non-recommended sealer.

A leak at the front of the transmission will be from either the front bearing retainer or retainer seal. Lubricant may be seen dripping from the clutch housing after extended operation. If the leak is severe, it may also contaminate the clutch disc causing the disc to slip, grab, and/or chatter.

A correct lubricant level check can only be made when the vehicle is level. Also allow the lubricant to settle for a minute or so before checking. These recommendations will ensure an accurate check and avoid an underfill or overfill condition. Always check the lubricant level after any addition of fluid to avoid an incorrect lubricant level condition.

High and Mighty Keith Bradsher, 2004-01-19 SUVs have taken over America's roads Ad campaigns promote them as safer and greener than ordinary cars and easy to handle in bad weather But very little about the SUV's image is accurate They poorly protect occupants and inflict horrific damage in crashes they guzzle gasoline and they are hard to control Keith Bradsher has been at the forefront in reporting the calamitous safety and environmental record of SUVs including the notorious Ford Firestone rollover controversy In High and Mighty he traces the checkered history of SUVs showing how they came to be classified not as passenger cars but as light trucks which are subject to less strict regulations on safety gas mileage and air pollution He makes a powerful case that these vehicles are even worse than we suspect for their occupants for other motorists for pedestrians and for the planet itself In the tradition of Unsafe at Any Speed and Fast Food Nation Bradsher's book is a damning exposé of an industry that puts us all at risk whether we recognize it or not
