Calculus & Its Applications, Global Edition Larry J. Goldstein, David I. Schneider, David C. Lay, Nakhle H. Asmar, 2018-03-05 Calculus Its Applications builds intuition with key concepts of calculus before the analytical material For example the authors explain the derivative geometrically before they present limits and they introduce the definite integral intuitively via the notion of net change before they discuss Riemann sums The strategic organisation of topics makes it easy to adjust the level of theoretical material covered The significant applications introduced early in the course serve to motivate students and make the mathematics more accessible Another unique aspect of the text is its intuitive use of differential equations to model a variety of phenomena in Chapter 5 which addresses applications of exponential and logarithmic functions The full text downloaded to your computer With eBooks you can search for key concepts words and phrases make highlights and notes as you study share your notes with friends eBooks are downloaded to your computer and accessible either offline through the Bookshelf available as a free download available online and also via the iPad and Android apps Upon purchase you ll gain instant access to this eBook Time limit The eBooks products do not have an expiry date You will continue to access your digital ebook products whilst you have your Bookshelf installed

Community College Mathematics Brian Cafarella, 2022-06-29 This book explores the rich history of community college math with a specific focus on gatekeeper math classes Gatekeeper math classes include courses such as college algebra introduction to statistics and all developmental math classes For community colleges successful completion of these classes is imperative for student retention This book presents a decade by decade analysis of the history of

community college mathematics The author employs a mix of conceptual empirical and quantitative research The empirical research stems from interviews with 30 community college faculty members from seven community colleges From the 1970s to the pandemic in the early 2020s the book explores math curricula as well as trends initiatives teaching practices and mandates that have impacted community college math The positives and negatives of such trends initiatives and mandates are presented along with suggestions on how to apply such knowledge going forward The author addresses the key questions How can we build a future model for community college gatekeeper math classes that is both successful and sustainable Additionally how can we learn from the past and the present to build such a model This book will be ideal for students in graduate programs focusing on community college leadership or developmental education leadership as well as all those hoping to improve success rates in community college mathematics programs

Teaching Mathematics at a Technical College Zachary Youmans,2022-11-25 Not much has been written about technical colleges especially teaching mathematics at one Much had been written about community college mathematics This book addresses this disparity Mathematics is a beautiful subject worthy to be taught at the technical college level The author sheds light on technical colleges and their importance in the higher education system Technical colleges area more affordable for students and provide many career opportunities These careers are becoming or have become as lucrative as careers requiring a four year degree The interest in technical college education is likely to continue to grow Mathematics like all other classes is a subject that needs time energy and dedication to learn For an instructor it takes many years of hard work and dedication just to be able to teach the subject Students should not be expected to learn the mathematics overnight As instructors we need to be open honest and put forth our very best to our students so that they can see that they are able to succeed in whatever is placed in front of them This book hopes to encourage such an effort A notable percentage of students who are receiving associate degrees will go through at least one of more mathematics courses These students should not be forgotten about their needs are similar to any student who is required to take a mathematics course to earn a degree This book offers insight into teaching mathematics at a technical college It is also a source for students to turn toward when they are feeling dread in taking a mathematics course Mathematics instructors want to help students succeed If they put forth their best effort and us ours we can all work as one team to get the student through the course and onto chasing their dreams Though this book focuses on teaching mathematics some chapters expand to focus on teaching in general The overall hope is the reader will be inspired by the great work that is happening at technical colleges all around the country Technical college can be should be and is the backbone of the American working class

The Software Encyclopedia ,1988 **The psychological process of stereotyping: Content, forming, internalizing, mechanisms, effects, and interventions** Baoshan Zhang,Magdalena Zawisza,Fangfang Wen,Junhua Dang,Fengqing Zhao,2023-02-06 Stereotype is a pervasive and persistent human tendency that stems from a basic cognitive need to categorize simplify and process the complex world This tendency is a precondition

for social bias prejudice and discrimination Previous research has mainly focused on the content psychological mechanisms and intervention strategies of negative stereotypes as well as the stereotype threat phenomenon induced by an evaluative context where a negative in group stereotype could be confirmed However there is a lack of research examining the psychological process of forming and internalizing social stereotypes the neurocognitive mechanisms of stereotypes and the interventions including potential neurocognitive interventions addressing the consequences of negative stereotypes Furthermore as per the Behavioral Immune System BIS theory the very presence of a pathogen is likely to increase stereotyping across various social categories especially in those with a heightened perception of vulnerability to disease Thus stereotypes can be enhanced in the context of pathogen exposure such as the current outbreak of COVID 19 pandemic People exposed to the virus are more likely to suffer from personal and institutional stereotypes and discrimination which may cause negative consequences to personal and social well being Therefore in the current context of global Covid 19 pandemic it is necessary to investigate the increasing biases driven by stereotypes regarding viewing pathogens as a threat which holds across different social categories Specifically what constitutes and shapes stereotypes towards people living in epidemic areas What are the consequences of these short term shaped stereotypes What is the relationship between the consequences of these stereotypes and traditional stereotypes i e stereotypes towards race gender and age Will these short term stereotypes interact with traditional stereotypes to exacerbate discrimination or will the recategorization based on the short term stereotypes during Covid 19 pandemic allow people to ignore the traditional inferior social identity and in turn to promote social integration among different groups And how can we prevent the increasing tendency of relying on stereotypes and instead increase pro social behaviors in the Covid 19 context The current Research Topic focuses on understanding the psychological process of forming and internalizing social stereotypes the neurocognitive mechanisms of stereotypes as well as interventions including potential neurocognitive interventions regarding the consequences of negative stereotypes And we also aim to gather the latest research investigating the broad psychological process of social stereotyping with an emphasis on the implications under the Covid 19 context That is this Research Topic is also interested in the negative stereotypes specific to Covid 19 pandemic as well as relevant preventative interventions aimed at people perceived as at higher Covid 19 exposure risk Theoretical and empirical research from psychology sociology and related fields is welcome Examples of possible themes for manuscripts include but are not limited to the following topics The content of stereotypes Social categorization and discrimination based on stereotypes Traditional stereotypes and their consequences The psychological process of social stereotype formation and internalization The mechanisms including neurocognitive mechanisms of stereotypes and its consequences The stereotype neutralizing interventions including neurocognitive intervention strategies towards negative stereotypes The psychological process of stereotypes during Covid 19 pandemic The social group categorization and social cohesion during Covid 19 pandemic The interactions between traditional stereotypes towards social

groups seen as inferior in the dominant culture and the short term stereotypes during Covid 19 pandemic The strategies of tackling stereotypes in Covid 19 pandemic
