**Dynamic Stabilisation of the Biped**  
**Lucy Powered by Actuators with Controllable Stiffness** Bram Vanderborght, 2010-09-07 This book reports on the

developments of the bipedal walking robot Lucy Special about it is that the biped is not actuated with the classical electrical drives but with pleated pneumatic artificial muscles In an antagonistic setup of such muscles both the torque and the compliance are controllable From human walking there is evidence that joint compliance plays an important role in energy efficient walking and running Moreover pneumatic artificial muscles have a high power to weight ratio and can be coupled directly without complex gearing mechanism which can be beneficial towards legged mechanisms Additionally they have the capability of absorbing impact shocks and store and release motion energy This book gives a complete description of Lucy the hardware the electronics and the software A hybrid simulation program combining the robot dynamics and muscle valve thermodynamics has been written to evaluate control strategies before implementing them in the real biped

*Distant Speech Recognition* Matthias Woelfel,John McDonough,2009-04-20 A complete overview of distant automatic speech recognition The performance of conventional Automatic Speech Recognition ASR systems degrades dramatically as soon as the microphone is moved away from the mouth of the speaker This is due to a broad variety of effects such as background noise overlapping speech from other speakers and reverberation While traditional ASR systems underperform for speech captured with far field sensors there are a number of novel techniques within the recognition system as well as techniques developed in other areas of signal processing that can mitigate the deleterious effects of noise and reverberation as well as separating speech from overlapping speakers Distant Speech Recognition presents a contemporary and comprehensive description of both theoretic abstraction and practical issues inherent in the distant ASR problem Key Features Covers the entire topic of distant ASR and offers practical solutions to overcome the problems related to it Provides documentation and sample scripts to enable readers to construct state of the art distant speech recognition systems Gives relevant background information in acoustics and filter techniques Explains the extraction and enhancement of classification relevant speech features Describes maximum likelihood as well as discriminative parameter estimation and maximum likelihood normalization techniques Discusses the use of multi microphone configurations for speaker tracking and channel combination Presents several applications of the methods and technologies described in this book Accompanying website with open source software and tools to construct state of the art distant speech recognition systems This reference will be an invaluable resource for researchers developers engineers and other professionals as well as advanced students in speech technology signal processing acoustics statistics and artificial intelligence fields

[Using Information Technology 9e Complete Edition](#) Brian Williams,Stacey Sawyer,2010-02-23 The Williams Using Information Technology 9th edition utilizes a practical applied approach to technology This text is user focused and has been highly updated including topics pictures and examples The Williams text contains less theory and more application to engage students who might be more familiar with technology Continually published and updated for over 15 years Using Information Technology was the first text to foresee

and define the impact of digital convergence the fusion of computers and communications It was also the first text to acknowledge the new priorities imposed by the Internet and World Wide Web and bring discussion of them from late in the course to the beginning Today it is directed toward the Always On generation that is at ease with digital technology comfortable with iPhones MySpace Facebook Twitter Wikipedia and the blogosphere but not always savvy about its processes possibilities and liabilities This 9th edition continues to address the two most significant challenges that instructors face in teaching this course Trying to make the course interesting and challenging and trying to teach to students with a variety of computer backgrounds This text also correlates with SimNet Online our online training and assessment program for the MS Office Suite and also computing concepts *Emotion-Oriented Systems* Paolo Petta, Catherine Pelachaud, Roddy Cowie, 2011-02-04 Emotion pervades human life in general and human communication in particular and this sets information technology a challenge Traditionally IT has focused on allowing people to accomplish practical tasks efficiently setting emotion to one side That was acceptable when technology was a small part of life but as technology and life become increasingly interwoven we can no longer ask people to suspend their emotional nature and habits when they interact with technology The European Commission funded a series of related research projects on emotion and computing culminating in the HUMAINE project which brought together leading academic researchers from the many related disciplines This book grew out of that project and its chapters are arranged according to its working areas theories and models signals to signs data and databases emotion in interaction emotion in cognition and action persuasion and communication usability and ethics and good practice The fundamental aim of the book is to offer researchers an overview of the related areas sufficient for them to do credible work on affective or emotion oriented computing The book serves as an academically sound introduction to the range of disciplines involved technical empirical and conceptual and will be of value to researchers in the areas of artificial intelligence psychology cognition and user machine interaction
