Everyday Beliefs about Emotion: Their Role in Subjective Experience, Emotion as an Interpersonal Process, and Emotion Theory Nov 15 2022 This eBook is a collection of articles from a Frontiers Research Topic. Frontiers Research Topics are very popular trademarks of the Frontiers Journals Series: they are collections of at least ten articles, all centered on a particular subject. With their unique mix of varied contributions from Original Research to Review Articles, Frontiers Research Topics unify the most influential researchers, the latest key findings and historical advances in a hot research area! Find out more on how to host your own Frontiers Research Topic or contribute to one as an author by contacting the Frontiers Editorial Office: frontiersin.org/about/contact.

The Impact of Complex Trauma on Development Aug 01 2021 Normal human development progresses through a process of differentiation and integration, and it is distorted and impeded by the fusion and fragmentation resulting from traumatic

experiences. The Impact of Complex Trauma on Development documents the pathological consequences of chronic interpersonal trauma on psychological development, behavior, and interpersonal relationships. It provides an integrative approach to therapy that is based on a rich psychoanalytically-oriented developmental psychology.

Situating Phenomenological Psychopathology: Subjective Experience Within the World Aug 25 2023 vThe discipline of phenomenological psychopathology has historically focused on elucidating the ways in which persons with psychiatric illnesses experience themselves and the world. Early pioneers in this field were aware of the impact of uncontrollable life events on the onset and course of severe illness, such as Jaspers' recognition that environmental events may stimulate or enhance certain "innate potentialities" for the development of a disorder. Furthermore, the role of environment and life events in the development and onset of psychiatric illness has been well-documented. For example, there is a clear relationship between the development of psychotic symptoms and life stressors including adverse childhood events, urban living, and migration. However, relatively little attention (with some notable exceptions) has been devoted to exploring the features of those experienced worlds

and how they may impact the trajectory of severe illnesses such as schizophrenia, depression, and personality disorders.

Subjective Consciousness Jul 12 2022 Uriah Kriegel develops an objective theory of what it is for a mental state to be conscious. The key idea is that consciousness arises when self-awareness and world-awareness are integrated in the right way. Conscious mental states differ from unconscious ones in that, whatever else they represent, they represent themselves in a very specific way.

The Explainability of Experience Apr 20 2023 This book reconstructs Spinoza's theory of the human mind against the backdrop of the twofold notion that subjective experience is explainable and that its successful explanation is of ethical relevance, because it makes us wiser, freer, and happier. Doing so, the book defends a realist rationalist interpretation of Spinoza's approach which does not entail commitment to an ontological reduction of subjective experience to mere intelligibility. In contrast to a long-standing tradition of Hegelian reading of Spinoza's Ethics, it thus defends the notion that the experience of finite subjects is fully real.

Moral Conflicts of Organ Retrieval May 10 2022 This book addresses ethical conflicts arising from saving the lives of patients who need a transplant while treating living and dead donors, organ

sellers, animals, and embryos with proper moral regard. Our challenge is to develop a better world in the light of debatable values and uncertain consequences.

Phenomenology of Affective Subjectivity Feb 29 2024

Investigating Subjectivity Jan 30 2024 Much has been missed by social researchers in their attempt to understand the human experience as a series of rational, cognitive choices. What comes under the rubric of "lived experience" fits no researcher's model other than, in the words of one of the volume's contributors, "one damned thing after another." Human subjectivity in lived experience, both that of the subject and of the researcher, is the topic of Investigating Subjectivity, an important corrective to the cool, disdainful stance of most previous social research. The dozen contributors examine various aspects of subject--the emotions, the gendered nature of experiences, the body-mind relationship, perceptions of time, place and setting, understanding of the self--and how these elements provide a fuller understanding of the human condition, incorporating subjectivity into research requires a new set of methods--systematic introspection, self-ethnography, staged readings, poetry, stories--many of which are demonstrated in the book. It also requires a focus on mundane (minor ailments, media images, hobbies) and

extraordinary (exotic trips, earthquakes, abortion experience), elements, which make up the bulk of lived experience, and how people react to these life events. Investigating Subjectivity stands out from any other books in the field because the emphasis is on research rather than theory or conceptualization. This outstanding volume is quality reading for academicians and undergraduate and graduate students in sociology, cultural studies, qualitative methods, and communication, especially those interested in emotions, narration, textual analysis, and symbolic interaction.

Brain and the Inner World Jan 18 2023 About this Book... The Brain and the Inner World is an eagerly-awaited account of a momentous revolution. Subjective mental states like consciousness, emotion, and dreaming were once confined to the realm of philosophy, psychoanalysis, and the human sciences. These topics now assume center stage in leading neuroscientific laboratories around the world. This shift has produced an explosion of new insights into the natural laws that govern our inner life. By two pioneers in the field, The Brain and the Inner World guides us through the exciting new discoveries, showing how old psychodynamic concepts are being forged into a scientific framework for understanding subjective experience. It is not that the mind is reduced to

neurobiology. Rather, thanks to neurobiology, we are free to believe in the power of the mind. The neurosciences will soon be able to argue with Plato, Descartes, James, Freud, and Lacan about the mysterious connections between emotions, experience, will, reason, and creativity.

The Bloomsbury Handbook of Existentialism Feb 16 2023 This fully revised and updated 2nd edition provides a comprehensive reference guide to existentialism, featuring key chapters on key existentialist thinkers, as well as chapters applying existentialism to subject areas ranging across politics, literature, feminism, religion, the emotions, cognitive science, and poststructuralism.

Contemporary developments in the field of existentialism that speak to issues of identity and exclusion are explored in 4 new chapters on race, gender, disability, and technology, whilst the 5th new chapter new chapter outlines analytic philosophy's complicated relationship to existentialism. Presenting the field of existentialism beyond the European tradition, this edition also includes a new key thinker chapter on Frantz Fanon, alongside Kierkegaard, Nietzsche, Heidegger, Sartre and de Beauvoir, as well as new engagement with the work of scholars on race and existentialism, including Lewis R. Gordon, George Yancy, and Richard Wright. The resources section at the end of the book includes an updated A to Z

glossary, and timeline of key events, texts and thinkers in existentialism, as well as a list of relevant organisations, and an annotated guide to further reading, making this 2nd edition an invaluable text for scholars and students alike.

Diary of a Philosophy Student Jul 24 2023

Revelatory insights into the early life and thought of the preeminent French feminist philosopher. Dating from her years as a philosophy student at the Sorbonne, this is the 1926-27 diary of the teenager who would become the famous French philosopher, author, and feminist, Simone de Beauvoir. Written years before her first meeting with Jean-Paul Sartre, these diaries reveal previously unknown details about her life and offer critical insights into her early philosophy and literary works. Presented here for the first time in translation and fully annotated, the diary is completed by essays from Barbara Klaw and Margaret A. Simons that address its philosophical, historical and literary significance. The volume represents an invaluable resource for tracing the development of Beauvoir's independent thinking and influence on the world.

Simone de Beauvoir and the Politics of Ambiguity May 02 2024 A study of Simone de Beauvoir's (1908-1986) political thinking. The author locates de Beauvoir in her own intellectual and political context and demonstrates her continuing

significance.

*The Journal of Speculative Philosophy Jun 30 2021
Sketching User Experiences: Getting the Design Right and the Right Design Dec 05 2021 Sketching User Experiences approaches design and design thinking as something distinct that needs to be better understood—by both designers and the people with whom they need to work—in order to achieve success with new products and systems. So while the focus is on design, the approach is holistic. Hence, the book speaks to designers, usability specialists, the HCI community, product managers, and business executives. There is an emphasis on balancing the back-end concern with usability and engineering excellence (getting the design right) with an up-front investment in sketching and ideation (getting the right design). Overall, the objective is to build the notion of informed design: molding emerging technology into a form that serves our society and reflects its values. Grounded in both practice and scientific research, Bill Buxton's engaging work aims to spark the imagination while encouraging the use of new techniques, breathing new life into user experience design. Covers sketching and early prototyping design methods suitable for dynamic product capabilities: cell phones that communicate with each other and other embedded systems, "smart" appliances, and things you only imagine in*

your dreams Thorough coverage of the design sketching method which helps easily build experience prototypes—without the effort of engineering prototypes which are difficult to abandon Reaches out to a range of designers, including user interface designers, industrial designers, software engineers, usability engineers, product managers, and others Full of case studies, examples, exercises, and projects, and access to video clips that demonstrate the principles and methods

The Practice of Collaborative Counseling and Psychotherapy Mar 08 2022 The Practice of Collaborative Counseling and Psychotherapy: Developing Skills in Culturally Mindful Helping is a comprehensive introduction to counseling and psychotherapy skills designed to teach future practitioners how to develop and foster collaborative relationships with their clients. Keeping power relations and cultural diversity at the forefront, Paré's text examines, step by step, the skills involved in collaborative therapeutic conversation—an approach that encourages a contextual view of clients and counteracts longstanding traditions of focusing primarily on individual pathology. Indeed, this insightful text teaches students how to keep clients at the heart of their therapy treatment by actively engaging them in the helping process.

APA Newsletters Mar 20 2023

Rethinking Disability in India Oct 27 2023 Moving away from clinical, medical or therapeutic perspectives on disability, this book explores disability in India as a social, cultural and political phenomenon, arguing that this `difference' should be accepted as a part of social diversity. It further interrogates the multiple issues of identification of the disabled and the forms of oppressio

Rethinking the Communicative Turn May 29 2021 Contrasting aesthetic versus linguistic centered visions for critical theory and the analysis of contemporary democratic theory and society, Martin Morris draws special attention to the concept of communicative freedom. He problematizes the paradigm shift within critical theory from the "philosophy of the subject" to the communicative action theory championed by Jürgen Habermas by opposing Habermas's reconstruction of critical theory to that of Theodor W. Adorno.

Subjective Experience Nov 27 2023 Morris N. Eagle explores the understanding and role of subjective experience in the disciplines of psychology, psychoanalysis, and philosophy of mind. Elaborating how different understandings of subjective experience give rise to very different theories of the nature of the mind, Eagle then explains how these shape clinical practices. In particular, Eagle addresses the strong tendency in

the disciplines concerned with the nature of the mind to overlook the centrality of subjective experience in one's life, to view it with suspicion, and to reduce it to neural processes. Describing examples of research in which subjective experience is a central variable, Eagle provides an outline of a model in which the dichotomy of conscious and unconscious is supplemented by subjective experience as a continuum. This book is essential reading for psychoanalysts, psychoanalytic psychotherapists, psychologists and anyone wishing to gain a deeper understanding of the importance of theories of the mind to therapeutic practice.

Subjective Experience and the Logic of the Other Apr 08 2022 The first Lacanian handbook for American psychotherapists. *Subjective Experience and the Logic of the Other* is the first handbook on Lacanian clinical practice specifically designed for American psychotherapists. Dispensing with jargon and elliptic formulations, Lander accomplishes the tour de force of making Lacan "user friendly." *Subjective Experience and the Logic of the Other* will appeal to mainstream psychotherapists and psychoanalysts wishing to understand the import of Lacanian theory, but fearful of its legendary difficulty. Rómulo Lander, who is a member of the International Psychoanalytical Association, an institution traditionally inimical to Lacan's

teachings, is exquisitely in tune with their trepidation. He therefore takes his colleagues by the hand and carefully introduces Lacanian concepts within the clinical context that is familiar to them. Lander's didactic approach liberates analysts from the coercion of technique, helping them to link their own subjective experience to their analysands' unconscious desire. This volume is truly a revolutionary book. After reading Lander's work, therapists will emerge transformed, imbued with a new confidence in their clinical work.

The Phenomenology of Embodied Subjectivity Apr 28 2021 The 17 original essays of this volume explore the relevance of the phenomenological approach to contemporary debates concerning the role of embodiment in our cognitive, emotional and practical life. The papers demonstrate the theoretical vitality and critical potential of the phenomenological tradition both through critically engagement with other disciplines (medical anthropology, psychoanalysis, psychiatry, the cognitive sciences) and through the articulation of novel interpretations of classical works in the tradition, in particular the works of Edmund Husserl, Maurice Merleau-Ponty and Jean-Paul Sartre. The concrete phenomena analyzed in this book include: chronic pain, anorexia, melancholia and depression.

Rethinking Consciousness: A Scientific Theory of Subjective Experience Dec 17 2022 “A first-class intellectual adventure.” —Brian Greene, author of *Until the End of Time* Illuminating his groundbreaking theory of consciousness, known as the attention schema theory, Michael S. A. Graziano traces the evolution of the mind over millions of years, with examples from the natural world, to show how neurons first allowed animals to develop simple forms of attention and then to construct awareness of the external world and of the self. His theory has fascinating implications for the future: it may point the way to engineers for building consciousness artificially, and even someday taking the natural consciousness of a person and uploading it into a machine for a digital afterlife.

It's really rather normal Feb 04 2022 Hearing voices or seeing images is much more common than one might think. Nevertheless, mainstream psychiatry still approaches such 'hallucinations' as signs of a mental disorder. This book shows how outdated this view really is. Experiential expert Tilly Gerritsma shares her experiences with hearing voices and related phenomena and describes how she has learned to deal with them, helped by her main, positive voice. She shows that hearing voices may offer a potential for psychological, emotional, and spiritual growth. Psychologist and philosopher

Titus Rivas gives a concise overview of theories about hallucinations. He rejects one-sided biopsychiatric theories and favors alternatives, such as social psychiatry. He stresses the reality and normality of psychic phenomena. People with paranormal experiences have not gone mad.

The Subjective Experience of Joblessness in Poland
Aug 13 2022 This book describes the experience of joblessness and unemployment in contemporary Poland. It does so by combining qualitative and quantitative data from a special project conducted in Poland after the Great Recession and the long-term Polish Panel Survey (POLPAN) to describe the lives of the jobless: women and men currently out of work, the recently re-employed, and housewives. The book uses a class and inequality perspective to investigate how these women and men became jobless, how they look for and find employment, their household and social activities, and their political participation. It contextualizes these experiences with a description of Poland's economy, labor market and employment policies after the fall of Communism and builds on the active interviewing and social constructionist approaches to explore the complex interviewer-respondent relationship.

Subjectivity and the Social World Sep 25 2023 At a time when the US government is spending enormous amounts of money on a project called

BRAIN and the European Union has committed itself to the multi-million Human Brain Project, the chances of revealing the workings of the neuronal components of the brain are as good as they have ever been. Nevertheless, even if brain functions – or the entire brain – could be simulated on a computer one day, as the EU project aims for, the question of the relation between the experiencing subject and the brain is still an open one. The tension between experienced subjectivity and its biological basis is at the core of recent philosophical, psychological, sociological, biological and interdisciplinary debates. The traditional Cartesian inner theatre and the resulting substance dualism cannot be made to fit scientific requirements. Reductive accounts, claiming some identity between mental and physical occurrences, display difficulties when it comes to accounting for the experiential dimension of human life. The central question is: What is a subject and how does a subject interact with others? This book is a collection of papers that provides innovative and insightful answers to this question. It is, therefore, as its name suggests, a discussion of subjectivity and the social world.

New Frontiers in Artificial Intelligence Mar 27 2021 This book presents the joint post-proceedings of five international workshops organized by the Japanese Society for Artificial Intelligence, during

the 19th Annual Conference JSAI 2005. The volume includes 5 award winning papers of the main conference, along with 40 revised full workshop papers, covering such topics as logic and engineering of natural language semantics, learning with logics, agent network dynamics and intelligence, conversational informatics and risk management systems with intelligent data analysis.

Dual-process Theories in Social Psychology May 22 2023 This informative volume presents the first comprehensive review of research and theory on dual-process models of social information processing. These models distinguish between qualitatively different modes of information processing in making decisions and solving problems (e.g., associative versus rule-based, controlled versus uncontrolled, and affective versus cognitive modes). Leading contributors review the basic assumptions of these approaches and review the ways they have been applied and tested in such areas as attitudes, stereotyping, person perception, memory, and judgment. Also examined are the relationships between different sets of processing modes, the factors that determine their utilization, and how they work in combination to affect responses to social information.

Frantz Fanon's 'Black Skin, White Masks' Jun 22 2023 "This book will be essential reading for students and researchers in the areas of

postcolonial studies, French and Francophone studies, cultural studies, ethnic and racial studies, politics, literature and psychoanalysis, and all those concerned, like Fanon, with the quest for human freedom."--BOOK JACKET.

EBook: Social Psychology 3e Oct 03 2021 Social psychology has a profound influence on our everyday lives; from our shopping habits to our interactions at a party. It seeks to answer questions that we often think and talk about; questions such as: - What circumstances prompt people to help, or not to help? - What factors influence the ups and downs of our close relationships? - Why do some people behave differently when on their own compared to in a group? - What leads individuals sometimes to hurt, and other times to help one another? - Why are we attracted to certain types of people? - How do some persuade others to do what they want? This new edition of Social Psychology has been revised to introduce a more flexible structure for teaching and studying. It includes up-to-date, international research with an emphasis throughout on its critical evaluation. Applied examples across the chapters help to highlight the relevance, and hence the impact, that the theories and methods of this fascinating subject have upon the social world. Key Features Include: - Research Close-Up: Following a brand-new style, this feature matches the layout used in research papers,

providing an accessible introduction to journal articles and the research methods used by social psychologists. - Focus On: Fully revised, these boxes look at opposing viewpoints, controversial research or alternative approaches to the topics. This offers a more critical outlook and prompts the questioning of the validity of published research - Recommended Readings: New to this edition, recommended further readings of both classic and contemporary literature have been added to each chapter, providing a springboard for further consideration of the topics. Connect Psychology is McGraw-Hill's digital learning and teaching environment. Students - You get easy online access to homework, tests and quizzes designed by your instructor. You receive immediate feedback on how you're doing, making it the perfect platform to test your knowledge. Lecturers - Connect gives you the power to create auto-graded assignments, tests and quizzes online. The detailed visual reporting allows you to easily monitor your students' progress. In addition, you can access key support materials for your teaching, including a testbank, seminar materials and lecture support. Visit: <http://connect.mcgraw-hill.com> for more details. Professor David N. Myers holds the Sady and Ludwig Kahn Chair in Jewish History. As of fall 2017, he serves as the director of the Luskin Center for History and Policy. He previously served as

chair of the UCLA History Department (2010-2015) and as director of the UCLA Center for Jewish Studies (1996-2000 and 2004-2010). Dr Jackie Abell is a Reader in Social Psychology with the Research Centre for Agroecology, Water and Resilience, based at Coventry University, UK. Her current areas of research interest include the application of social psychology to wildlife conservation and environmental issues to facilitate resilience and sustainable development, place attachment and identity, social cohesion and inclusion. Professor Fabio Sani holds a Chair in Social and Health Psychology at the University of Dundee. His general research interest concerns the mental and physical health implications of group processes, social identity and sense of belonging. He has been an associate editor of the European Journal of Social Psychology.

Role Interference and Moral Distress in the Subjective Experience of Deep Undercover Law Enforcement Operatives Oct 15 2022

Thinking About Human Memory Jun 10 2022
Thinking About Human Memory provides a novel analytical approach to understanding memory that considers the goals of the memory task, the cues and information available, the opportunity to learn, and interference from irrelevant information (noise). Each of the five chapters describing this approach introduces historical ideas and

demonstrates how current thinking both differs from and is derived from them. These chapters also contain analyses of current problems designed to demonstrate the power of the approach. In a subsequent chapter, the authors discuss how memory is controlled by the environment, by others, and by ourselves, and then apply their insights to the problem solving of children, our hominin ancestors, and scrub jays. Finally, the questions of how to define episodic memory and how to investigate phylogenetic and developmental changes in memory are addressed. This book will appeal to memory researchers, including applied researchers, and advanced students.

The Subject of Experience Nov 03 2021 The Subject of Experience is about the self, the person. It takes the form of a series of essays which draw on literature and psychology as well as philosophy. Galen Strawson discusses the phenomenology or experience of having or being a self (What is the character of self-experience?) and the fundamental metaphysics of the self (Does the self exist? If so, what is its nature? How long do selves last?): he develops an approach to the metaphysical questions out of the results of the phenomenological investigation. He argues that it is legitimate to say that there is such a thing as the self as distinct from the human being. At the same time he raises doubts about how long selves can be

supposed to last, insofar as they are distinct from human beings. He also raises a doubt about whether a self (or indeed a human being) can really be said to lose anything in dying. He criticizes the popular notion of the narrative self, and considers the differences between 'Endurers' or 'Diachronic' people, who feel that they are the same person when they consider their past and future, and 'Transients' or 'Episodic' people, who do not feel this. He considers the first-person pronoun 'I' and a number of puzzles raised by the phenomena of self-reference and self-knowledge. He examines Locke's, Hume's and Kant's accounts of the mind and personal identity, and argues that Locke and Hume have been badly misunderstood.

*Worlds Of Experience Sep 01 2021 The intersubjective perspective regards all psychological processes as emanating from personal interrelatedness. First presented by Robert D. Stolorow in his classic work *Faces in a Cloud* (1978), it is one of the most powerful concepts to be introduced into the post-Freudian era. In *Worlds of Experience*, Dr. Stolorow and two eminent colleagues elaborate on intersubjectivity, going beyond the clinical and theoretical questions of earlier work to explore the philosophical underpinnings of psychoanalytic theory and practice. The culmination of three decades of collaborative work, this book will be essential*

reading for academics, students, and clinicians.

Subjective Well-Being Jan 06 2022 Subjective well-being refers to how people experience and evaluate their lives and specific domains and activities in their lives. This information has already proven valuable to researchers, who have produced insights about the emotional states and experiences of people belonging to different groups, engaged in different activities, at different points in the life course, and involved in different family and community structures. Research has also revealed relationships between people's self-reported, subjectively assessed states and their behavior and decisions. Research on subjective well-being has been ongoing for decades, providing new information about the human condition. During the past decade, interest in the topic among policy makers, national statistical offices, academic researchers, the media, and the public has increased markedly because of its potential for shedding light on the economic, social, and health conditions of populations and for informing policy decisions across these domains. Subjective Well-Being: Measuring Happiness, Suffering, and Other Dimensions of Experience explores the use of this measure in population surveys. This report reviews the current state of research and evaluates methods for the measurement. In this report, a range of potential experienced well-being data

applications are cited, from cost-benefit studies of health care delivery to commuting and transportation planning, environmental valuation, and outdoor recreation resource monitoring, and even to assessment of end-of-life treatment options. Subjective Well-Being finds that, whether used to assess the consequence of people's situations and policies that might affect them or to explore determinants of outcomes, contextual and covariate data are needed alongside the subjective well-being measures. This report offers guidance about adopting subjective well-being measures in official government surveys to inform social and economic policies and considers whether research has advanced to a point which warrants the federal government collecting data that allow aspects of the population's subjective well-being to be tracked and associated with changing conditions.

Retrieving Experience Jun 03 2024 In Retrieving Experience, Sonia Kruks engages critically with the postmodern turn in feminist and social theory. She contends that, although postmodern analyses yield important insights about the place of discourse in constituting subjectivity, they lack the ability to examine how experience often exceeds the limits of discourse. To address this lack and explain why it matters for feminist politics, Kruks retrieves and employs aspects of postwar French existential theory—a tradition that, she argues,

postmodernism has obscured by militantly rejecting its own genealogy. Kruks seeks to refocus our attention on the importance for feminism of embodied and "lived" experiences. Through her original readings of Simone de Beauvoir and other existential thinkers—including Sartre, Fanon, and Merleau-Ponty—and her own analyses inspired by their work, Kruks sheds new light on central problems in feminist theory and politics. These include debates about subjectivity and individual agency; questions about recognition and identity politics; and discussion of whether embodied experiences may sometimes facilitate solidarity among groups of different women.

Simone de Beauvoir and the Politics of Ambiguity Sep 13 2022 This, the first full-length study of Simone de Beauvoir's political thinking, both examines Beauvoir in her own politico-intellectual context and demonstrates her originality and continuing significance. Insisting upon the ambiguity of all human action, Beauvoir presents an affirmation of human freedom and also a somber warning about the inevitability of failures in politics.

The Bloomsbury Handbook of Creative Research Methods Dec 29 2023 This book provides both an overview of, and an insight into, the rapidly expanding field of creative research methods. The contributors, from four continents, range from

doctoral students through to independent and practice-based researchers to senior professors, providing a clear view of the applicability of creative research methods in all types of research work. Chapters offer examples of creative research methods in practice, and advice on how to transfer or adapt those methods for different disciplines and settings. Research ethics and research quality are considered throughout. This is a timely handbook which provides information for novice researchers and inspiration for experienced researchers, and is essential reading for anyone interested in creative research methods.

*Self and Other Jan 23 2021 Can you be a self on your own or only together with others? Is selfhood a built-in feature of experience or rather socially constructed? How do we at all come to understand others? Does empathy amount to and allow for a distinct experiential acquaintance with others, and if so, what does that tell us about the nature of selfhood and social cognition? Does a strong emphasis on the first-personal character of consciousness prohibit a satisfactory account of intersubjectivity or is the former rather a necessary requirement for the latter? Engaging with debates and findings in classical phenomenology, in philosophy of mind and in various empirical disciplines, Dan Zahavi's new book *Self and Other* offers answers to these questions. Discussing such*

diverse topics as self-consciousness, phenomenal externalism, mindless coping, mirror self-recognition, autism, theory of mind, embodied simulation, joint attention, shame, time-consciousness, embodiment, narrativity, self-disorders, expressivity and Buddhist no-self accounts, Zahavi argues that any theory of consciousness that wishes to take the subjective dimension of our experiential life serious must endorse a minimalist notion of self. At the same time, however, he also contends that an adequate account of the self has to recognize its multifaceted character, and that various complementary accounts must be integrated, if we are to do justice to its complexity. Thus, while arguing that the most fundamental level of selfhood is not socially constructed and not constitutively dependent upon others, Zahavi also acknowledges that there are dimensions of the self and types of self-experience that are other-mediated. The final part of the book exemplifies this claim through a close analysis of shame.

Brain and Mind Feb 24 2021 Recent advances in the understanding of brain functions are reviewed in this text, along with how neurobiological research and brain imaging contributes to identifying and treating neurologic and psychiatric disorders. Chapters focus on consciousness, memory, emotions, language, communication,

trauma, pain and resilience, while exploring how stressful events impact mental health and interrupt the continuity of one's sense of self. Clinical vignettes of patients with neurological and mental affections reveal coping and grieving processes in dreams and narratives. This presentation of clinical experience with neuro-scientific evidence provides neurologists, psychiatrists, psychotherapists and psychologists with a coherent picture of the brain-mind relationship.

The Message Within Apr 01 2024 This provocative book provides the first comprehensive and informative overview of the role of various subjective experiences in social cognition and behavior, and argues that the study of such experiences may be one of the key unifying themes of social psychology. Based on recent theoretical and empirical developments in the discipline, this select group of leading international researchers surveys extensive evidence and shows that subjective experiences play a key role in most aspects of social cognition and social behavior. The book contains five main sections, discussing the role of subjective experiences in social information processing (Part 1), their influence on memory (Part 2) and their role in intergroup contexts (Part 3). The role of affective experiences in social thinking and behavior is analyzed (Part 4), and the influence of subjective experiences on the

development and change of attitudes and stereotypes is also addressed (Part 5).
