

# Chapter 1

## The Systems Development Environment

### Chapter Overview

Chapter 1 is an overview of the systems development process, as well as an overview of the textbook. This chapter introduces students to the modern approach to systems analysis and design using various methodologies. Students are introduced to several systems development components, including the process and data-oriented approaches to systems development, different types of information systems, and the systems development life cycle.

This textbook is intended primarily for juniors taking a core course in the information systems major, although the book can be adapted for a similar course at the junior college level or for a two-course sequence on analysis and design. Often students are not familiar with the systems development process, different organizational components, or how these components work together. This chapter provides the general organizational context in which systems development takes place.

The text uses the Systems Development Life Cycle (SDLC) methodology (including its associated problems with the traditional waterfall approach) to introduce students to the structured approach in creating new systems. The student is also introduced to other methodologies such as the Agile Methodologies, eXtreme Programming, Object-Oriented Analysis and Design (OOAD), and the Rational Unified Process (RUP). The text compares and contrasts the new with more traditional methods in an effort to show both the advantages and limitations of these methods.

Chapter 1 introduces students to visual and emerging development tools. CASE tools are used to apply an engineering approach to systems development and can support each phase of the SDLC.

### Instructional Objectives

Specific student learning objectives are included at the beginning of the chapter. *From an instructor's point of view, the objectives of this chapter are to:*

1. Define and discuss the modern approach to systems analysis and design from an organizational perspective incorporating techniques, tools, and methodologies.
2. Explain how an organization's objectives, structure, and processes are essential in the development of systems to meet their needs.
3. Explain that the SDLC process is not sequential but cyclical and that the order is adaptable as required for different projects; also, to emphasize that often analysts and designers may go backwards to the previous step to complete unfinished products or to correct errors or omissions discovered in the next phase.
4. Explain the difference between the logical design and the physical design as it relates to systems development.
5. Discuss the problems with the waterfall SDLC and explain the different approaches analysts, designers and developers have developed to improve the Systems Analysis and Design process.
6. Discuss Agile methodologies and eXtreme programming and how these compare to the traditional Systems Development Life Cycle (SDLC).
7. Explain and discuss object-oriented analysis and design (OOAD) and the Rational Unified Process (RUP).
