Winner of the David Unaipon Award, an engaging, moving and often funny yarn about growing up in the home of two Aunties running a sheep farm in rural Gundagai. Growing up in the shifting landscape of Gundagai with her Nan and Aunties, Sunny spends her days playing on the hills near their farmhouse and her nights dozing by the fire, listening to the big women yarn about life over endless cups of tea. It is a life of freedom, protection and love. But as Sunny grows she must face the challenge of being seen as different, and of having a mother whose visits are as unpredictable as the rain. Based on Jeanine Leane's own childhood, these funny, endearing and thought-provoking stories offer a snapshot of a unique Australian upbringing. The quality revolution in American industry, now more than a decade old, has produced an avalanche of books, but this is the first in-depth study reporting the struggles from inside the companies that have attempted large-scale improvement efforts. Jeremy Main has interviewed more than a dozen chief executives, all of whom have managed quality programs, including Charles Clough of Nashua, Robert Galvin of Motorola, James Hagen of Conrail, Roger Milliken of Milliken, Ray State of Analog Devices, and John Young of Hewlett-Packard, in addition to hundreds of other senior executives, workers, labor representatives, city officials, military officers, and hospital administrators. Through their experiences, Main reveals what works and what doesn't work when an organization attempts the transforming leap into Total Quality Management. Their message comes through loud and clear: it is a tough battle, but persistence can win priceless rewards. The notable successes at BancOne, L.L. Bean, Ford, Hewlett-Packard, Motorola, Saturn, Solectron, and Xerox prove it. However, Main shows that Motorola and Hewlett-Packard, among the earliest and best practitioners of total quality, are still finding obstacles to overcome. And some other early converts, such as Florida Power & Light, have stumbled badly along the way. Main's vivid descriptions of these setbacks capture the difficulties inherent in implementing a total quality system. His dramatic accounts of success and failure at companies such as Milliken and Intel convey valuable knowledge that is otherwise gained only by actual experience. The way to achieve the "new quality" of today, Main shows, is through a full commitment to TQM. He reveals through the experiences of these companies that TQM is not just a management tool, as it has often been used, but a management philosophy that is indispensable in attaining a high level of quality -- now a requisite for competing successfully. With the collaboration of the Juran Institute, Main demonstrates how TQM has transformed companies by improving quality at all levels. The accounts of these triumphs are direct evidence that world-class quality is attainable by American industry, and will inspire and point the way for executives, managers, and government officials in their timeless pursuit of total quality. Advances in Cosmetic Surgery, a yearly multi-specialty publication, brings you the best current practice from the preeminent practitioners in plastic surgery, facial plastic surgery, cosmetic dermatology, and oculoplastic surgery. A distinguished editorial board identifies current advances and breakthroughs in the field and invites specialists to contribute original articles on these topics. These insightful overviews bring concepts to a clinical level and explore their everyday impact on patient care. Whether you're learning about a topic for the first time or actively performing one of the discussed procedures, this publication aims to appeal to all specialists in cosmetic surgery. Your software needs to leverage multiple cores, handle thousands of users and terabytes of data, and continue working in the face of both hardware and software failure. Concurrency and parallelism are the keys, and Seven Concurrency Models in Seven Weeks equips you for this new world. See how emerging technologies such as actors and functional programming address issues with traditional threads and locks development. Learn how to exploit the parallelism in your computer's GPU and leverage clusters of machines with MapReduce and Stream Processing. And do it all with the confidence that comes from using tools that help you write crystal clear, high-quality code. This book will show you how to exploit different parallel architectures to improve your code's performance, scalability, and resilience. You'll learn about seven concurrency models: threads and locks, functional programming, separating identity and state, actors, sequential processes, data parallelism, and the lambda architecture. Learn about the perils of traditional threads and locks programming and how to overcome them through careful design and by working with the standard library. See how actors enable software running on geographically distributed computers to collaborate, handle failure, and create systems that stay up 24/7/365. Understand why shared mutable state is the enemy of robust concurrent code, and see how functional programming together with technologies such as Software Transactional Memory (STM) and automatic parallelism help you tame it. You'll learn about the untapped potential within every GPU and how GPGPU software can unleash it. You'll see how to use MapReduce to harness massive clusters to solve previously intractable problems, and how, in concert with Stream Processing, big data can be tamed. With an understanding of the strengths and weaknesses of each of the different models and hardware architectures, you'll be empowered to tackle any problem with confidence. What You Need: The example code can be compiled and executed on *nix, OS X, or Windows. Instructions on how to download the supporting build systems are given in each chapter. 10 Years Younger, launched in April 2004, was the first lifestyle series on British television to feature cosmetic surgery. Since then, increased acceptability, availability and affordability have prompted a massive rise in the number of cosmetic procedures carried out each year in the UK, with that number set to top a quarter of a million in 2007. It is now believed that 45% of women and 37% of men in the UK would consider cosmetic surgery. 10 Years Younger has undoubtedly influenced the public's perception of cosmetic surgery and here, in the 10 Years Younger Cosmetic Surgery Bible, Jan Stanek openly and honestly discusses the pros and cons of each procedure. All aspects of each process are discussed - what it involves, who should consider it, what will it solve, what it won't solve, the cost, the potential risks, the potential reactions and the length of recovery. There are even before and after photos to show you what can be achieved. So, if you're considering a face lift, a boob job, a tummy tuck, or even just a Botox injection, this is the book for you. Contains original papers and abstracts from the Japanese. AN INSTANT NEW YORK TIMES BESTSELLER "Provocative and appealing . . . well worth your extremely limited time." —Barbara Spindel, The Wall Street Journal The average human lifespan is absurdly, insultingly brief. Assuming you live to be eighty, you have just over four thousand weeks. Nobody needs telling there isn't enough time. We're obsessed with our lengthening to-do lists, our overfilled inboxes, work-life balance, and the ceaseless battle against distraction; and we're deluged with advice on becoming more productive and efficient, and "life hacks" to optimize our days. But such techniques often end up making things worse. The sense of anxious hurry grows more intense, and still the most meaningful parts of life seem to lie just beyond the horizon. Still, we rarely make the connection between our daily struggles with time and the ultimate time management problem: the challenge of how best to use our four thousand weeks. Drawing on the insights of both ancient and contemporary philosophers, psychologists, and spiritual teachers, Oliver Burkeman delivers an entertaining, humorous, practical, and ultimately profound guide to time and time management. Rejecting the futile modern fixation on "getting everything done," Four Thousand Weeks introduces readers to tools for constructing a meaningful life by embracing finitude, showing how many of the unhelpful ways we've come to think about time aren't inescapable, unchanging truths, but choices we've made as individuals and as a society—and that we could do things differently. Fans of the Invisible String will love this story about a grandmother and granddaughter who must find different ways to stay connected even when they are far apart. A little girl is moving far away from Grandma. Neither wants to say goodbye. But when Grandma brings the girl into her sewing room, she shows her that they have the longest, strongest thread in the whole world to keep them connected. Full of hope and heart, this book reminds kids that family connections transcend physical separation, no matter how far apart we are. Collaboration between the Suzhou Embroidery Research Institute and Robert Glenn Ketchum. Photographs by Ketchum were recreated as pieces of embroidery by SERI. Simplified Facial Rejuvenation is divided into sections that include anatomy and anesthesia, classifications, dermatologic procedures, suture lifts, surgical variations of the face, surgical variations of the eyes, brow, neck, lips, nose ear, and scalp, and medical legal aspects. The book presents multiple variations of suture lift procedures to allow the physician to decide which is best. Unique surgical procedures of the face are presented, many of which are techniques of minimal incision facelift. The book brings together the more popular procedures for patients that include simpler methods of facial rejuvenation with less pain, shorter recovery time, lower cost, and fewer complications. Starting out on a journey is good in and of itself, but what really sets it apart and increases the chances of your success is your focus and planning. This book simply gives you steps to help ensure you are still working towards your hair care goals daily and weekly. Consistency is the key. As you continue to repeat these techniques, they will become a habit for you it takes 60 days (eight weeks) for something to become a habit. Take it one day at a time and you will get there! Great programmers aren't born—they're made. The industry is moving from object-oriented languages to functional languages, and you need to commit to radical improvement. New programming languages arm you with the tools and idioms you need to refine your craft. While other language primers take you through basic installation and "Hello, World," we aim higher. Each language in Seven More Languages in Seven Weeks will take you on a step-by-step journey through the most important paradigms of our time. You'll learn seven exciting languages: Lua, Factor, Elixir, Elm, Julia, MiniKanren, and Idris. Learn from the award-winning programming series that inspired the Elixir language. Hear how other programmers across broadly different communities solve problems important enough to compel language development. Expand your perspective, and learn to solve multicore and distribution problems. In each language, you'll solve a non-trivial problem, using the techniques that make that language special. Write a fully functional game in Elm, without a single callback, that compiles to JavaScript so you can deploy it in any browser. Write a logic program in Clojure using a programming model, MiniKanren, that is as powerful as Prolog but much better at interacting with the outside world. Build a distributed program in Elixir with Lisp-style macros, rich Ruby-like syntax, and the richness of the Erlang virtual machine. Build your own object layer in Lua, a statistical program in Julia, a proof in code with Idris, and a quiz game in Factor. When you're done, you'll have written programs in five different programming paradigms that were written on three different continents. You'll have explored four languages on the leading edge, invented in the past five years, and three more radically different languages, each with something significant to teach you.
