

CPR BLS Exam 2021/2022 AHA answered

1. Why is defibrillation important?
 - It can restore a regular cardiac rhythm (An AED can identify an abnormal heart rhythm that needs a shock. The AED can then deliver a shock that can convert a rhythm back to normal.)
2. While performing high-quality CPR on an adult patient, what action should you ensure is being accomplished?
 - Compressing to a depth of at least 2 inches (When performing chest compressions on an adult (or adolescent), a compression depth of at least 2 inches (5 cm) should be used.)
3. A 63-year-old man collapses while mowing the lawn. He is unresponsive, is not breathing, and does not have a pulse. A neighbor, who is an EMT, rushes to her with an AED. When the AED arrives, what is the first step for using it?
 - Turn on the AED (The first step for using an AED (when it becomes available) is to power on the AED if needed. Some devices will power on automatically when you open the lid or case. Because AEDs vary according to the model and manufacturer, it is important to become familiar with the AED used in your particular setting.)
4. After the AED pads are attached to the victim's bare chest, the AED prompts you to shock the victim. What is the next step when using an AED?
 - Follow the AED prompts and press the shock button once everyone is clear. (After the AED pads are attached to the victim's bare chest, you should follow the AED prompts. The AED will analyze the victim's heart rhythm and prompt you to deliver a shock if needed.)
5. What should you do if you need to use an AED on someone who has been submerged in a pool?
 - Pull the victim out of the water, and wipe the chest, and use the AED (Special situations may require the rescuer to take additional actions when placing AED pads for a victim who is immersed in water. In this case, the victim should be pulled out of the water. If the chest is covered with some water, it should be quickly wiped before attaching the AED pads.)
6. A victim with who is choking becomes unresponsive. What is your first course of action?
 - Start CPR, beginning with chest compressions (Choking victims with severe airway obstruction may worsen and become unresponsive. If this occurs, then high-quality CPR must be started immediately, beginning with chest compressions.)

Relieving Pain in America Institute of Medicine, Board on Health Sciences Policy, Committee on Advancing Pain Research, Care, and Education, 2011-10-26 Chronic pain costs the nation up to 635 billion each year in medical treatment and lost productivity The 2010 Patient Protection and Affordable Care Act required the Department of Health and Human Services HHS to enlist the Institute of Medicine IOM in examining pain as a public health problem In this report the IOM offers a blueprint for action in transforming prevention care education and research with the goal of providing relief for people with pain in America To reach the vast multitude of people with various types of pain the

nation must adopt a population level prevention and management strategy The IOM recommends that HHS develop a comprehensive plan with specific goals actions and timeframes Better data are needed to help shape efforts especially on the groups of people currently underdiagnosed and undertreated and the IOM encourages federal and state agencies and private organizations to accelerate the collection of data on pain incidence prevalence and treatments Because pain varies from patient to patient healthcare providers should increasingly aim at tailoring pain care to each person s experience and self management of pain should be promoted In addition because there are major gaps in knowledge about pain across health care and society alike the IOM recommends that federal agencies and other stakeholders redesign education programs to bridge these gaps Pain is a major driver for visits to physicians a major reason for taking medications a major cause of disability and a key factor in quality of life and productivity Given the burden of pain in human lives dollars and social consequences relieving pain should be a national priority
