In 2016, Americans fed up with the political process vented that frustration with their votes. Republicans nominated for president a wealthy businessman and former reality show host best known on the campaign trail for his sharp rhetoric against immigration and foreign trade. Democrats nearly selected a self-described socialist who ran on a populist platform against the influence of big money in politics. While it is not surprising that Americans would channel their frustrations into votes for contenders who pledge to end business as usual, the truth is that we don't have to pin our hopes for greater participation on any one candidate. All of us have a say—if we learn, master and practice the skills of effective citizenship. One of the biggest roadblocks to participation in democracy is the perception that privileged citizens and special interests command the levers of power and that everyday Americans can't fight back. That perception is undoubtedly why a 2015 Pew Charitable Trusts survey found that 74 percent of those Americans surveyed believed that elected officials didn't care what people like them thought. Graham and Hand intend to change that conventional wisdom by showing citizens how to flex their citizenship muscles. They describe effective citizenship skills, provide tips from civic experts. Even more importantly, they offer numerous examples of everyday Americans who have used their skills to make democracy respond. The reader will see themselves in these examples of citizens who chose to be victorious participants rather than tranquil spectators in the arena of democracy. By the end of the book, you will have new confidence that citizen participation is the lifeblood of America -- you will be ready to make governments work for you, not the other way around. "Hurwitz describes the emotional extravagance that is at the root of Mahler's popularity, the consistency of his symphonic thinking, and his dazzling and revolutionary use of orchestral instruments to create an expressive musical language that is varied in content and immediate in impact."--BOOK JACKET. New Tools to Overcome the Human Barriers to Change Leaders know that their job is to transform organizations to keep pace with technology and an ever-changing business environment. They also know that they are bound to fail in doing so. But this discouraging prospect is not because they won't be able to solve a technological or strategic problem. Leaders will fail because of intractable human responses associated with change--responses such as fear, ingrained habits, politics, incrementalism, and lack of imagination. These stumbling blocks always arise when we humans are faced with change, but what if we had a way to transcend them? This book reveals a radical new method for doing just that. Written by the executive who designed and implemented the process, the neuroscientist who helped make it work, and the academic who explains why it works and how to do it, Leading Transformation introduces an innovative yet proven process for creating breakthrough change. Divided into three steps--envisioning the possible, breaking down resistance, and prototyping the future--this process uses cutting-edge tools such as visualization, fiction, cartoons, rap music, artifact trails, and neuroprototypes to overcome people's inability to imagine or react to what doesn't yet exist, override powerful habits and routines that prevent them from changing, and create compelling narratives about the organization's future and how to get there. Showing how these tools have been used successfully by companies such as

Lowe's, Walmart, Pepsi, IKEA, Google, Microsoft, and others, the process revealed in this book gives leaders the means to transcend the human barriers that block change and lead their organizations confidently into the future.
