Sprint Round

Problems 1–30

---

Name \_\_\_\_\_

**DO NOT BEGIN UNTIL YOU ARE INSTRUCTED TO DO SO.**

This section of the competition consists of 30 problems. You will have 40 minutes to complete all the problems. You are not allowed to use calculators, books or other aids during this round. Calculations may be done on scratch paper. All answers must be complete, legible and simplified to lowest terms. Record only final answers in the blanks in the left-hand column of the competition booklet. If you complete the problems before time is called, use the remaining time to check your answers.

In each written round of the competition, the required unit for the answer is included in the answer blank. The plural form of the unit is always used, even if the answer appears to require the singular form of the unit. The unit provided in the answer blank is the only form of the answer that will be accepted.

Simoson, 2021-04-30 There is a nineteen year recurrence in the apparent position of the sun and moon against the background of the stars a pattern observed long ago by the Babylonians In the course of those nineteen years the Earth experiences 235 lunar cycles Suppose we calculate the ratio of Earth's period about the sun to the moon's period about Earth That ratio has 235/19 as one of its early continued fraction convergents which explains the apparent periodicity Exploring Continued Fractions explains this and other recurrent phenomena astronomical transits and conjunctions lifecycles
